Russian president Boris Yeltsin yesterday underwent a multiple heart bypass operation which surgeons declared "a complete success" but said had been more complicated than expected. Mr Yeltsin recovered consciousness and opened his eyes yesterday evening following the seven-hour operation. Doc-tors expected to keep him on

By Chrystia Freeland

an artificial ventilator until at least this morning.
Dr Renat Akchurin, the surgeon who led the 12-strong all-Russian team which performed the operation, said they had had to bypass more than the three or four arterial blockages

which had been expected. He would not specify the number of bypasses performed, saying it was "the personal affair" of the president and that he was not authorised to reveal it.

Western medical experts said it was unusual to have to bypass more than four blockages, and the multiple operation indicated severe weakness of the heart. The seriousness

as total success of the procedure could complicate the president's convalescence. Doctors also said the length of the operation, double the three or four-hour standard for a heart bypass, suggested Mr Yeltsin's ail-

powers will be returned to the president when he signs a sec-

Kremlin officials did not specify when Mr Yeltsin would take back his political mantle. but said he would decide himself when he was again fit enough to rule Russia. Before the operation, aides had said Mr Yeltsin would do so as soon as he had regained conscioustion of when the Russian leader will return to active politics, would become apparent only over the next few days during the difficult post-opera-

tive period.

However, other physicians were less reserved. Dr Yevgeny Chazov, the cardiologist who prolonged former Soviet leader Leonid Brezhnev's tenacious grip on life in the 1970s and 1980s, said "the operation

went better than expected".

Dr Michael DeBakey, the US pioneer of heart bypass surgery, who watched the operation on a monitor with three other western doctors, said it had been "a complete succe

The operation deflected much of the country's attention from a nationwide strike, called to protest against wage arrears which have left millions of workers without salaries for several months.

The action drew tens of thousands of participants in hundreds of cities across Russia, but did not have the impact which organisers had promised. In his new role as presidential stand-in, Mr

### Doctors say seven hours of surgery more complicated than expected **Bayer** in talks over DM20bn chemicals acquisition

By Jenny Luesby in Leverkusen, Germany

Bayer, the German chemicals and pharmaceuticals company, said yesterday it was shopping for a large acquisi-tion that could be worth as much as DM20bu (\$13.2bn).

Unveiling results for the first nine months of the year, Mr Manfred Schneider, Bayer's chairman, said the group had held preliminary talks with Ciba of Switzerland

and Monsanto of the US. Both Ciba and Monsanto have said they plan to spin off their chemicals businesses. Baver is interested in a direct trade purchase.

Mr Schneider said Baver would be able to take on far more debt than it had at present "if we find the big project we are looking for". Net debt stood at DM1.1bn at the end of

Mr Helmut Loehr, finance director, said net debt of DM10bn would be comfortable, but the group would be willing to increase it to a max-

imum of DM20bn. Mr Schneider denied Baver was in merger talks with BASF, its German rival, although he did say a tie-up between the life sciences operations of the two compa-

nies was "a possibility". Bayer's expansion plans come as many chemicals and pharmaceuticals groups are separating the management and in some cases the ownership - of the two businesses. Yet Mr Schneider was emphatic that Bayer had no plans to separate its pharmaceuticals and chemicals concerns. It had yet to be shown

that such demergers created

shareholder value, he said. Mr Schneider warned that the group would not now meet its goal of a 10 per cent increase in annual pre-tax profits this year. "The sluggishness of the chemical economy in Europe and growing pressure on prices have dampened our optimism," he said. Also, unexpected exceptional charges, principally in

## Italian and Spanish bonds surge on Emu expectations

By Richard Lapper in London and David Buchan in Paris

Italian and Spanish government bond prices yesterday surged on renewed expectations that the two countries could become founder members of European monetary

Spanish 10-year bonds now yield about an eighth of a percentage point less than UK government bonds or gilts, while Italian bonds are only about a sixth of a percentage point more. As recently as January, Italian 10-year bonds yielded nearly 3 percentage points more than gilts.

"It has been a massive con-vergence day," said Mr Alex Cooper, manager of Tullett and Tokyo, a futures broker at the London International Financial Futures and Options Exchange. Pointing to beavy buying by large US hedge funds as well as by other institutional investors, he said that "convergence trades are right back on".

Yield spreads 10 year benchmark bond yields over Germany beats points

Chirac, French president, that Spain would be ready to join Emu in 1999, were cited by the others."

analysts as one factor which encouraged buying. "We have no doubt as regards Spain but Italy has shown the same will," Mr Chirac, said after the Franco-Spanish summit in Marseilles. "We hope that Italy is ready at the same time as

Comments by Mr Jacques reports in the European press,

a number of investors are expecting a report by the European Commission - scheduled for publication today - to take an optimistic view of Spain's ability to meet Maastricht Emu criteria by next year. Ms Sharda Persaud, London

based European economist with Italy's San Paolo Bank, said many investors believed the German authorities were now prepared to accept a more flexible interpretation of the Maastricht targets in exchange for a strict post-Emu stability pact. This pact will help set the economic policy framework for Emu members.

A strong performance by the US and German bond markets buoyed the higher-yielding European markets. German manufacturing orders fell 3.6 per cent in September, compared with August. This suggests third-quarter growth will be slower than in the second quarter and inflationary pressures are weak.

were likely to form the basis of a new banking law being drafted by the government. "The banking sector is facing a crisis without precedent," he said.

"There is an extraordinary misunderstanding by the public of the reality facing The report says that own-

ership of the Caisse d'E-pargne, frequently criticised by its rivals for offering loans at unprofitably low rates, is unclear. It should modify its statutes to clarify how it is controlled, and pay to the state the FFr62bn (\$12bn) in accumulated profits that it holds.

The Post Office, too, should make clear the cost of providing financial services which compete with the commercial banks, says

the report. The senators say that over the next few years tax-exempt savings products, such as the Livret A currently available through the Caisse d'Epargne and the Post Office, should be sold by all

the country's banks.

They also call for changes in the law which in practice prevents banks from going bankrupt, arguing that, as long as there is an adequate deposit protection scheme. banks should be allowed to fail like other companies.

The report urges the government to sell off most of the banks still in public ownership, retaining only those institutions with a genuine public service mission which cannot be provided by the private sector - such as long-term finance to small

which is permissible at pres-

The 1937 regulation limiting working hours in banks needs to be changed and a special tax on bank payrolls abolished.

In an interview, Mr Lam-bert also highlighted weaknesses in the country's system of banking supervision. arguing that the "controllers and the controlled" were often drawn from the same elite of top civil servants.

There was a need, he said to diversify the methods of recruitment, but the report stops short of making recommendations on how to do so.

### Bulgarian premier urged to resign

Senior figures in Bulgaria's Socialist party yesterday called for the resignation of Mr Zhan Videnov, the prime minister, after the party's battering in the weekend presidential election, AP reports from Sofia. The challenge came in a

letter on the front page of the party newspaper Duma, two days after voters elected opposition candidate Mr Petar Stovanov as president. Led by Mr Alexander Lilov, a former party chief who remains influential among Bulgaria's former communists, 19 officials said Mr Videnov had forfeited his right to govern because of

Underscoring the economic crisis, government officials were in Brussels seeking aid from the European Union to ensure they could buy enough grain for the winter while the official BTA news agency said the International Monetary Fund proposed the creation of a currency board to manage Bulgaria's finances. Experts said such a board would aim to restore finan-

the country's economic trou-

cial discipline. Mr Videnov has said he would seek a vote of confidence at a party meeting next Monday. But he said there was no reason to quit unless someone had an alternative policy.

The presidency is largely ceremonial, but Sunday's vote was seen as a referendum on the Socialist govern-

### the committee, banks should be allowed to charge customers for the use of cheques and be allowed to pay interest on accounts, neither of

officials said they feared the affair would continue to bedevil the former premier, with a series of related cases already under way.

The Supreme Court decision also exempted from testifying two other Socialist politicians. Mr Narcis Serra. former deputy premier, and Mr José María Benegas, a prominent Basque figure in the party.

By David White in Madrid

The accusations against Mr González were made during an investigation into a bungled 1983 kidnapping, the first action claimed by the murky Anti-Terrorist Liberation Groups (Gal), which is also held responsible for about 25 murders. His former interior minister. Mr José Barrionuevo, faces charges along with 14 others on grounds of association with an armed band, illegal detention and misuse of pub-

lic funds Mr Ricardo Garcia Damborenea, a disaffected former local party leader in the Bilbao region, claimed to have discussed covert anti-terrorist activities on several occasions with Mr González, and Mr Julián Sancristóbal, former director of state security, said he was convinced the prime minister must have been in the know. Both men bave been charged in

the case. A more recent accusation came from Mr Luis Roldán, former head of the paramilitary Civil Guard police force, currently in jail facing fraud charges. He claimed to have been told by Mr Barrionuevo that the prime minister was fully behind the anti-terrorist campaign.

"The Gal case does not end here," the Communist-led United Left party said after the court announcement. anxiety. The daily El Mundo, which has played a leading role in the allegations against Mr González, said the decision flouted the principle of

Lyoural acts it.

You know that I will undergo a serious operation. Today I want to say thank you to those who have been sending letters and telegrams wishing their president the speediest recovery.

Sympathy and a good word are sometimes more important to a person than any medicine.

My family is helping me in this difficult moment, taking care of me. My thanks to my wife, daughters and grandchildren. Thanks to you all.

My family and friends are concerned on the eve of the operation, they are nervous. But I am sure everything will go all right.

During the operation I have by decree transferred all presidential powers to the head of the government, Victor Stepanovich Chernomyrdin. Not for a minute will the country be without a leader with full powers. He and my other colleagues are tested and reliable people. They will have great responsibility in the time to come.

I do not intend to stay long in the hospital. I believe I will soon be working at full strength, as I did before.

Be aware that everything I have done, am doing and will do is all for the sake of Russia, for your well-being and for a worthwhile life.

It is especially important for me that you know I wish you all health and peace and good luck.

Yeltsin's letter to the Russian people published yesterday

## Official Russia all smiles after Yeltsin ordeal

cameras and the thoughts of foreign governments were focused yesterday on the Moscow Cardiological Centre, the sprawling concrete crescent where Russia's most famous seven-hour bypass operation.

But for many of the ordinary Russians who earn meagre salaries at the hospital President Boris Yeltsin's long-awaited surgery was a matter of little concern.

"It makes no difference to me what the outcome is," said Oleg, a 38-year-old electrician in a scruffy leather jacket as he walked down the cigarette-strewn footpath leading to the hospital. "No matter what happens, the situation won't change. he doesn't run the country

Other passers-by, including a young doctor who works at the hospital, a middle-aged woman struggling to qualify for treatment there, and several nurses and lab technicians, said life was proceeding as usual inside the Cardiological Centre. although a few complained about heightened

security. But in this desert of popular indifference, Russia's first family and its chosen surgeons formed an oasis of

Their ordeal began at 4am, when Mr Yeltsin, always an early riser, carefully combed his hair and put on his favourite sweater.

Then his motorcade raced from the darkness of the countryside into the city and up the wooded slope to the Cardiological Centre, surprising militiamen who said they had not been told in advance.

At 7am, after signing a few decrees, including an emotional appeal to the Russian people and an order temporarily handing presi-dential powers to Mr Victor Chernomyrdin, the prime minister. Mr Yeltsin submitted himself to the clamps and scalpels of a 12-person all-Russian surgical team.

he lenses of television heart bypass surgery, watched on video monitors, but were not asked to intervene or offer advice.

After more than eight hours, the team's leader, Dr Renat Akchurin, emerged in his surgical whites, looking heart underwent a gruelling tired but relieved to tell reporters about the stress of cutting into the Kremlin's most powerful arteries.

"I tried to forget that it was the president of Russia and remember it was just a sick man," he said.

Mrs Naina Yeltsin, the president's wife, who herself underwent a kidney operation over the summer,

seemed even more tense. In a brief television interview in the dark corridors of. the Cardiological Centre, Mrs Yeltsin said she and "the girls" - the president's two adult daughters - had not vet been permitted to see Mr Yeltsin.

### Chrystia Freeland sets the scene on the day of the big operation

Beneath the nerves and exhaustion, official Russia seemed elated by the outcome of the president's operation. A nurse in the Cardiological Centre said the surgeons indulged in a champagne toast before facing reporters.

Kremlin officials seemed equally pleased. Mr Sergei. Yastrzhembsky, the president's press secretary. grinned broadly during an evening television interview. He took particular delight in teasing Russian news agencies for failing to believe Kremlin press aides when they telephoned at 7.20am yesterday with news that the president's opera-tion had begun.

He said it had taken his own voice to convince journalists. It will take the return of a vigorous President Yeltsin to active politics to convince Russia's Four western doctors, equally sceptical citizens including Dr Michael that he really does rule the DeBakey, the US pioneer of country.

### Fragile Romanian coalition bears heavy burden he votes of Romania's Voters have invested much hope and expectation in a prospective government

young people, its city dwellers and its business class propelled the centre-right Democratic Convention into first place in Sunday's parliamentary elections. Now they are looking to it to speed the country's transformation into a modern western-style democracy, capable of joining Nato and the European Union.

## French delay rail break-up

The French government has postponed parliamentary debate of its plan to split the country's rail system into separate track maintenance and operating companies.

Mr Bernard Pons, transport minister, told the National Assembly that the government still aimed to create next year a new state entity to take over responsibility for FFT125bn (\$24bn) of the SNCF rail company's debt and for maintaining and building rail track - leaving the SNCF purely as the national rail operator.

But the scheme would not be presented to parliament next week, as planned, because of "sensitivities" inside SNCF and among MPs. These had been exacerbated by the European Commission's plans to try to introduce cross-border competition in rail. Mr Pons said Brussels' moves had stirred "anxiety and doubt" among rail unions The unions have demanded the government maintain SNCF's rail operator monopoly and guarantee the jobs of 40,000 track maintenance workers. Anxious to avoid any repeat of last autumn's rail strike, Mr Pons has decided to play for time by commissioning a further study of the new rail track company. David Buchan, Paris

### German terrorist is jailed

Red Army Faction terrorist Birgit Hogefeld, 40. (pictured above in court yesterday) was jailed for life for murder and for attempting to assassinate Mr Hans Tietmeyer, now president of the Bundesbank. She was found guilty of the murder of a US soldier and two others in an attack on the US Rhein-Main airbase near Frankfurt in 1985, an assassination attempt against Mr Tietmeyer in 1988, and an attack on a newly built prison in 1998. She was acquitted of causing the death of a police officer in a special security forces operation at Bad Kleinen, eastern Germany, in which she was arrested in June 1993. More than 20 members of the extreme leftwing RAF have been jailed for murder and attempted murder since the now-defunct terrorist group began its campaign at the end

### Russians in diamonds probe

A Russian government investigation has revealed serious financial violations at the state diamond company Almazy Rossii-Sakha (ARS). An audit is planned of its ties to the De Beers diamond cartel. The government has given the president of the republic of Yakutia, where ARS is based, week to remove the officials running the company. Russia's prosecutor general is also investigating the company. Mr Alexander Livshits, Russia's finance minister, said fines for ARS's violations of foreign exchange regulations alone amount to more than \$379m.

In August, a government report showed Rbs3,100bn (\$570m) of debts despite reported 1995 revenues of \$1.38bn The report said ARS management diverted hundreds of billions of roubles since the company was founded in 1992 to costly and unprofitable projects. Meanwhile, dividends were never paid on the state's controlling stake in the company. ARS is state-owned, but controlled largely by local authorities in Yakutia, which strives for economic 98 per cent of Russia's diamond production, is one of the country's largest export earners.

### Croatia says UN can stay

i taris

Croatia yesterday said it would extend the UN mandate in eastern Slavonia for six months, abandoning its demand for the peacekeeping force to withdraw by spring. Croatia's foreign minister, Mr Mate Granic, said he expected the UN Security Council this week to pass a resolution extending the UN mandate until mid-July. He said an additional monitoring mission would be deployed after July for six months while Croatia took control of the region, the last Serb-held area in the country.

Eastern Slavonia is home to 150,000 Serbs. The Croatian army seized two other Serb-held regions - part of a rebel state - in 1995, causing 180,000 Serbs to flee Croatia. The UN is anxious to prevent another flood of refugees when Croatia takes control of the region. Laura Silber, Belgrad

### Communists go on trial

Lithuania's former communist leaders went on trial yesterday for their part in the crackdown by Soviet troops in Vilnius in January 1991, when 13 people were killed. Mr Mykolas Burokevicius, the former Communist party chief, and Mr Juozas Jermalavicius, the former party ideologist, are accused of murder and attempting a coup. Mr Burokevicius, 71, who fled to Russia after Lithuania gained its independence, has denied any responsibility for the crackdown, saying local Communist party leaders had no control over Soviet troops.

### Norway acts to restrain krone

interes rates (96)

Norway's central bank yesterday cut its key overnight lending rate by 0.5 per cent to 6 per cent -the first cut since March in a bid to hold down the value of the Norwegian krone. High oil prices and the strength of the public finances, which are in heavy surplus thanks to North Sea petroleum revenues, have led to upward pressure on the krone. Mr Kjell Storvik, central bank governor, said significant purchases of foreign currency by the

bank recently had not restrained the currency sufficiently. The rate cut had been taken reluctantly as the bank was concerned about the danger of overheating in the economy. It said the cut made more important the need for a tough fiscal policy by the minority Labour government. It stressed the 1997 budget should not be altered to allow greater public spending as many opposition groups demand. Hugh Carnegy, Stockholm opposition groups demand.

■ Belgian unemployment fell to 13.8 per cent in October compared with 14.2 per cent in September. The Belgium-Luxembourg Economic Union posted a trade surplus of BFr18.5bn (\$593m) in August, up from BFr4.4bn a year earlier.

Denmark had a current account surplus of DKr2.0bn (\$345m) in August against a revised surplus of DKr/67m

from within Germany declined 3.2 per cent while those from abroad fell 4.1 per cent. The overall decline was slightly greater in western Germany (down 3.6 per cent) than in the east (down 8.2

The DIHT said the construction industry was facing another meagre year. The industry had lost its position as the motor of recovery in eastern Germany, where growth of 2-3 per cent is forecast this year and 1-8 per cent in 1997 below that in the west for

The ministry said orders the first time since 1991. This is a particularly worrying signal for the Bonn government as economic recovery in east Germany remains top of the policy

## Deal reached on privatisation of Postbank

By Peter Norman in Bonn

Deutsche Post, the German post office, and Postbank, the postal savings bank, have reached an agreement that should enable Postbank shares to be sold to private investors during the next six months, Mr Wolfgang Bötsch, German post and telecommunications minister, announced yesterday.

But before the accord between the two fending state-owned companies can take effect. Chancellor Helmut Kohl's coalition government has to agree to give Denische Post the right to acquire a 25 per

cent stake in Postbank to help pay for Postbank's use of post office counters. Yesterday's announcement of the co-operation pact was meant to end six years of quarrelling between Deutsche Post and Postbank. Instead. within minutes, Postbank said it had not been told of the plan to give Deutsche Post the rights to 25 per cent of its

The Free Democrat party, already at odds with other coalition parties over tax policy, announced it would stick by a previous agreement to give Deutsche Post an initial stake of 15 per cent

dence should Deutsche Post take a further 10 per cent.

Mr Bötsch now has the difficult task of securing FDP backing for the new plan. He said he would open negotiations with the party this week. According to Mr Bötsch, Deutsche Post said it would sign the agreement only if it was given the rights to the Post-

bank shares immediately. Although the actual transfer is still planned for 1999, this procedure would allow Deutsche Post to include the Postbank holding in

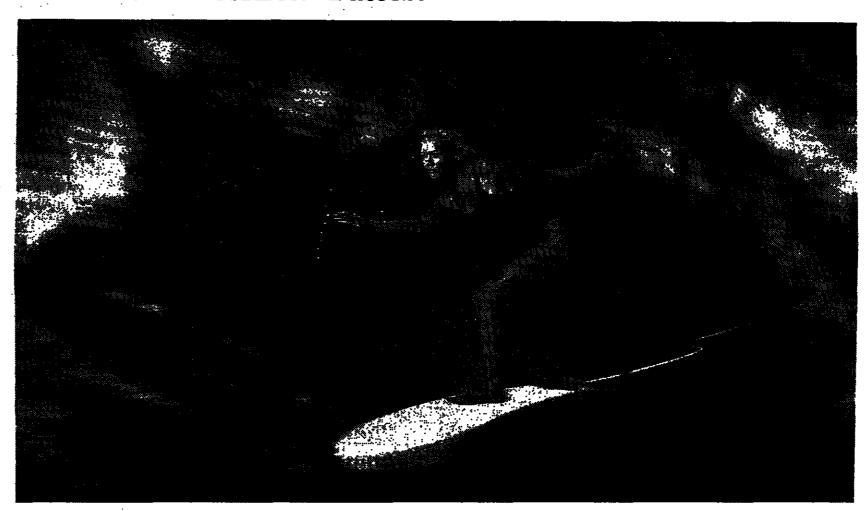

of Postbank in 1999 and which its balance sheet. Deutsche Post guaranteed Postbank's indepeninsisted that this was necessary to bridge a gap between the yearly value of DM1.48bn (\$973m) it placed on its counter services and the figure of about DMIbn the

nk was prepared to pay. Under the compromise agree-ment, Postbank will pay Deutsche Post DM1.1bn for use of its counters next year. The fee will drop 8 per cent a year in the following three years and by 13 per cent in 2001 to reflect expected productivity improvements at Deutsche Post, cutting Postbank's annual payment to Deutsche Post to about

By that time, both companies should be in private hands and quoted on German stock exchanges. The sale of Deutsche Post is set for 1999 after it has established it can be profitable. The transfer of a majority of Post-

bank shares to private ownership should happen much sooner. Postbank has been in contact with the BHW housing finance group, the Volkfürsorge insurance company and BHF Bank of Frankfurt, with a view to harnessing their expertise and services in return for equity stakes.

## High cholesterol and the hot property from Little Rock

just a burger lover." America's fat-free elites may scoff at Bill Clinton's famously unhealthy eating habits. But at Doe's Eat

Place, his favourite greasy spoon back home in Little Rock, Arkansas, his appetite is cause for celebration. "He got a good appetite, a real good appetite," says Mrs Lucille Robinson, nodding her head with quiet satisfaction.

She ought to know: since 1976, Mrs Robinson has been cooking

made Arkansas famous for something other than hillbillies. Yesterday she was back in the sweaty kitchen of Doe's, surrounded by giant sacks of raw french fries and huge tubes of hamburger meat, as a young man clad in bloody white apron used an oversized ice cream scoop to prepare hamburger patties

for the state's most famous son. The food was for what Mrs Robinson insisted would be the Clinton victory party. Flashing a front tooth framed in solid gold, Mrs Robinson scoffed at the notion there

Mrs Robinson admitted she was not quite sure whether Mr Clinton would attend; but she had sent the

invitation to the White House herself.

Doe's staff were expecting the secret service to arrive at any moment, to stalk between red vinyl chairs upturned on red-checked tablecloths, and bring dogs to sniff the scuffed and scarred black-and-white linoleum of the oldest restaurant in Little Rock.

As the screen door banged

incessantly with men passing back

Eldridge, Doe's owner, reminisced over the days when Governor Clinton ate at the diner almost daily. Mr Eldridge says he has only seen Mr Clinton six or seven times since he was elected in 1992, but his

eating habits have not changed.

"He usually has a few hot tamales and then maybe a steak," Mr Eldridge says. Mrs Robinson points out that this is the Clinton dinner menu – for lunch, it is always a cheesburger. "And he likes to

Eldridge confides, adding that the First Lady, Mrs Hillary Clinton, also has a weakness for hot tamales.

The walls are papered with pictures of a younger, slimmer Bill Clinton eating just such foods in the private, panelled back room at Doe's, reserved for his use. Mr Eldridge is not shy to admit that the president's patronage has made that room a hot property in Little Rock: it is often rented out by companies and rich Arkansans for entertaining.

Meanwhile, it was almost time to turn on the neon Budweiser sign in

the window and open for lunch. A few hundred yards away, at the train station, Mr Clinton was just about to enter the polling station to vote for himself - and do what he could to ensure the correct result for Mrs Robinson's victory party. She would have hamburgers and hot tamales ready for him either way - and gumbo and chilli and steaks and fries. His appetite was her pride and joy. Not for her, a fat-free president.

motivation for 1,010 crimes, or 12.8 per cent of the total. Attacks on male homosexuals accounted for 735 cases. or 72.1 per cent. Ethnicity and national origin was the fourth major category of hate crimes.

The most frequently reported offence was intimidation, responsible for 41 per cent of all cases. Destruction and vandalism of property accounted for 23 per cent of the offences, assault for 18 per cent and aggravated assault for 13 per cent.

AMERICAN NEWS DIGEST

## BP in plea for vindication

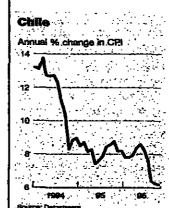

British Petroleum has asked the legal authorities in Colombia to investigate allegations that the company is collaborating with Colombian military intelligence to suppress dissent in oil-producing areas.

Mr John Browne, BP's chief executive, said yesterday the allegations were "groundless and without substance" He disclosed the company had written to Colombia's prosecutor general in Bogota last week, asking him to

stigate each allegation to prove them true or

BP, one of the largest foreign investors in Colombia, is subject like other oil companies to a "war tax" to help defray the cost of military operations. It has also had to provide lodging and other support to security forces protecting its facilities, as well as to workers on the pipeline linking oilfields with export outlets. But executives said there was no question of "collaborating" with the army. In the last three months there have been two attacks on BP operating sites. In one incident two policemen were killed. There have also been complaints from some local groups about the company's environ-mental, labour and welfare policies, Robert Corzine, London

### Chile's inflation rate slows

Chile's inflation rate is continuing to slow, according to official figures released yesterday, which show a 6.2 per cent year-on-year increase in the against 8.8 per cent in the same period last year. The Central Bank is now confident it will meet its inflation target of 6.5 per cent for 1996. However, it is awaiting the results of current public sector wage negotiations and the final size of the budget, due to be approved by Congress by the end of the month, in

order to decide when to relax its credit squeeze. Unemployment figures in the three months to September, also released yesterday, showed an unexpected fall from 7 Imogen Mark, Santiago

### Ex-officer on US spy charges A former Soviet intelligence officer is expected to appear in a Massachusetts court on charges of trying to obtain information on US missile defence.

Mr Vladimir Galkin, a Russian citizen who worked for the former KGB, was arrested last week on arrival at New York's John F. Kennedy airport, a court official said. The charge stems from Mr Galkin's alleged espionage
activities from 1990 to 1991.

## UK, US restart open skies talks

By Michael Skapinker, Aerospace Correspondent

Government negotiators from the UK and the US meet in Washington today in an attempt to restart aviation talks which collapsed

acrimoniously in August. The talks, which the UK says are at the Americans' initiative, are aimed at reaching a new "open skies" agreement between the two countries. The US has made the conclusion of such an agreement a precondition for approval of the proposed alliance between British Airways and American Airlines.

The last time UK negotia-

out for Washington, they received a message from their US counterparts telling them not to bother coming. The cause of the breakdown was a memorandum from the British government making it clear that the UK was not prepared to sign the sort of accord the US had concluded with Germany and

other European countries. In particular, the UK objected to giving US airlines "beyond rights", allowing them to carry passengers from Britain to third countries. The UK argued that "beyond rights" should be granted only if UK airlines

were granted cabotage, the would not be productive". right to carry passengers within the US. Virgin Atlantic, the independent UK carrier. has said that it wants to set up a domestic US service.

The US insisted its airlines had to be given "beyond rights" and rejected the UK's demand for cabotage. The US also rejected a UK proposal that a tribunal be set up to protect smaller carriers against predatory pricing and anti-competitive behaviour by large airlines.

The US said in August the UK's proposals "fell so far short of providing the essential elements of an open skies agreement that talks

Opinion on whether today's talks stand a better chance of success are mixed. A US official said his government's intention was to see whether the UK's position had shifted. "These discussions are intended to see

whether there's a mutual

understanding on how to

move forward." He said, however, that the US was not prepared to back down from its insistence that the UK had to sign a similar agreement to that concluded with other European countries. The US has said that if the UK receives

pean countries which have already signed deals would demand that their accords be renegotiated.

This suggests that any compromise will have to come from the UK. BA is anxious to conclude its alliance with American. USAir. BA's existing US partner, has said it will end its codesharing and frequent flyer programme with the UK carrier in March.

The UK Office of Fair Trading has submitted a report on the BA-American alliance to Mr Ian Lang, trade and industry secretary, who is expected to make an

The airline business is one of the most competitive on earth. So to ensure their continued success, KLM Royal Dutch Airlines brought Computer Associates onboard.

With CA, KLM can take advantage of the world's most advanced client/server financial software: CA-Masterpiece 72000.

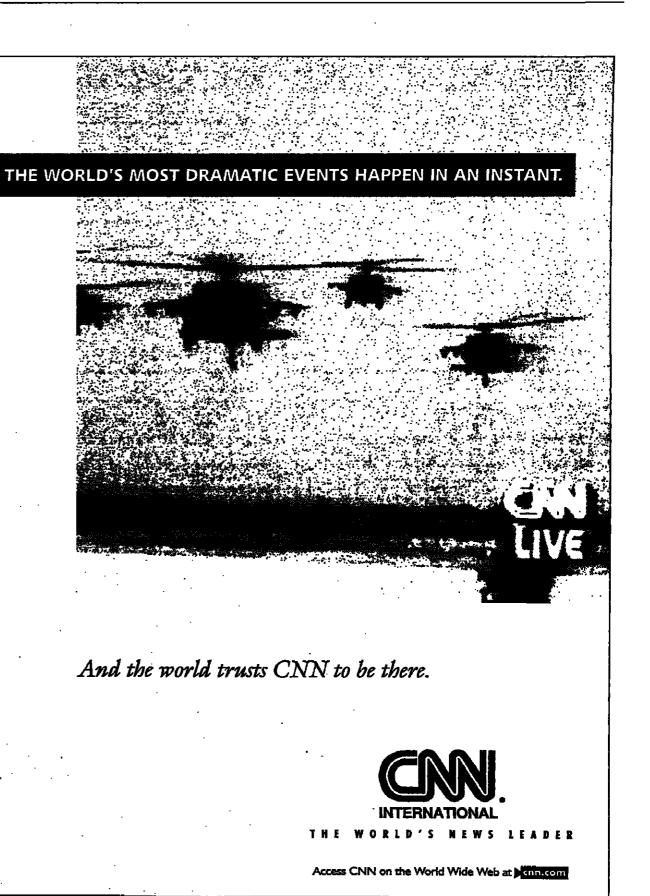

As Executive Vice President and Corporate Controller, Hans Bruggink says, "KLM is an international business with offices all over the globe. So we needed financial software that was multilanguage and multi-currency. In both cases, Masterpiece fit the bill."

What's more, Bruggink appreciates the fact that Masterpiece operates in "real-time," giving his staff immediate access to the information they need right from their PCs.

Perhaps best of all, Bruggink says, CA and KLM worked together to customise Masterpiece to precisely fit their needs: "CA made sure they had all the input they

needed to tailor Masterpiece to our specific requirements. And they continue to refine the software to keep up with the

new demands of our business." Sounds like a good partnership. "Flying sky high," says Bruggink. Spoken like a true airline executive.

## Bhutto swamped by a wave of allegations

Dakistan's prime minis-ter Ms Benazir Bhutto Farhan Bokhari details the political and economic upheaval that toppled Pakistan's premier is out of a job again. dismissed on charges of corruption in a repeat of her fate six years ago.

The man who gave her and her government their marching orders on Monday night. President Farooq Leghari, was around the last time she was fired - but then he was her close ally. Indeed, many Pakistanis remember Mr Leghari in a protest march two years later being beaten by police because of his loyalty to Ms Bhutto, by then back in opposition.

But it seems the repeated allegations of corruption and mismanagement against Ms Bhutto's new government. elected in October 1993, were too much for President Leghari. With the necessary nodfrom the military, he ended her second attempt to bring about the "social revolution" she promised her people.

They appeared not to take it to beart. There was a heavy troop presence in the country's large cities, including the capital Islamabad, but there were few signs yesterday of public concern at the fall of her government. in parts of the country such as Karachi's poorest Urdu-speaking neighbourhoods, which have faced the brunt of a recent security clampdown, there were small celebrations in which people gave each other gifts

off the roads to judge public reaction, but life returned to normal by the afternoon. The only deviation from normal life was the late delivery of newspapers, which had to delay their editions for up to four hours to carry the full text of the presidential order dismissing the government.

The stock market in Karachi was closed yesterday for a local holiday, but share prices jumped on the "kerb" or informal market, and are expected to rise today on the official exchange. Businesses are generally hoping that Traffic was initially thin the investment climate will

as fearful motorists stayed period of uncertainty has dent to sack her. Her govern-For many Pakistanis, Ms

Bhutto's downfall was unimaginable just months ago when President Leghari was still seen to be on her side (Pakistan's president is elected by members of both houses of the federal parliament and Pakistan's four provincial legislatures). The army said repeatedly that it was in no mood to intervene to halt the growing civil disorder and political mismanagement. The opposition, meanwhile, was divided. Yet Ms Bhutto did nothing

ment almost always dismissed corruption allegations baseless propaganda.

The charges against Ms Bhutto's government have not been set out in detail yet, but are generally assumed to refer to allegations that Ms Bhutto's husband, Mr Asif Ali Zardari, whom she appointed investments minister, took bribes or kickbacks on the award of government contracts.

The president also accused the government of ignoring the plight of hundreds of Pakistanis who were alleg-

in Karachi as part of a clampdown last year. Pakistan's economic crisis

also played a part in the timing of Ms Bhutto's removal. Having failed to meet the conditions of two failed International Monetary Fund programmes since she came to office in 1993, she was forced to negotiate a third one last month after the country's foreign exchange reserves slipped to just \$750m, equivalent to only four weeks of imports. The country's dire shortage of foreign exchange

reflects its heavy short-term

eign currency deposits in banks. These total some \$8bn of which around \$2bn is footloose money, Pakistan thus faces a con-

ment relies heavily on for-

cess that became very difficult after revenue projections following the government's budget in June showed Pakistan would fail to meet IMF targets. The IMF suspended drawings on a \$600m credit as a result.

Bankers believe that whoever eventually emerges in power in Pakistan will have to stick to this programme or face a serious foreign debt. crisis. But the IMF programme is politically controversial because among its Rs40bn (\$1bn) in budget measures is a plan to tax agriculture for the first time. Public protests also followed the steep increase in petrol prices that followed the 8 per cent devaluation with which the IMF programme was launched last month.

Meanwhile, Ms Bhutto's downfall has come at a difficult moment for her in the province of Sindh, her vital home base and the bastion of support for the Bhutto family. The killing in September of her estranged brother, Murtaza, by the police in Karachi was followed by

the ancestral home of Ms Bhutto in the city of Larkana illustrated how serious matters had become. The belief among the ruling party's dissidents that Mr Zardari may have ordered the tinuous need to refinance killing gained wider maturing borrowings, a pro- approval later, when Ghinwa, Murtaza's widow formally made that allegation before a Karachi judge.

It is by no means certain Ms Bhutto will be permitted to return to politics. The possibility of criminal charges against her busband and investigations into her own financial dealings were yesterday not being ruled out by members of Pakistan's new interim administration.

The opposition Pakistan Muslim League (PML) welcomed Ms Bhutto's downfall and says it is confident of winning the next elections. However, its leader, Mr Nawaz Sharif, was also tainted with charges of corruption before his government fell in 1993.

A statement from Mr Mairaj Khalid, the new prime minister, that free and fair elections could not be held unless the election commission was "powerful and independent", was widely seen as the first important suggestion that politicians may face extensive probes into their financial affairs ahead of the next elections.

### **Rights** meeting imperils Apec harmony

By James Kynge in Kuala Lumpur

Malaysian human rights groups, defying government pressure, announced yesterday that they will go ahead with a controversial conference on East Timor which officials say could strain ties with Indonesia.

The conference, which may attract more than 200 representatives mainly from regional non-governmental organisations, has placed Malaysia in a delicate diplomatic predicament. Although it is unofficial, Malaysian officials are wormatic ried that the meeting may offend its large neighbour to the south.

The meeting from November 9 to 11 is expected to highlight alleged human rights abuses in East Timor just a week before the Asia Pacific Economic Co. operation (Apec) forum is to be held in the Philippines.

Apec, a grouping of Asian and Pacific rim countries including the US, had its 1994 meeting in Indonesia overshadowed by East Timorese demonstrations, and activists have said that they plan more protests at this year's Apec meeting.

This year the question of East Timor, a former Portuguese colony annexed by Indonesia in 1976, is particularly sensitive after Mr Jose for East Timorese indepenactivist last month.

Mr Ramos-Horta, who is reviled by Indonesian authorities, was invited to attend the Malaysian conference but he said in a statement yesterday that he had decided to stay away to "avoid putting Malaysia in a difficult position with the

Indonesian government".

He added that he admired Dr Mahathir Mohamad, Malwhom he hoped could play a positive role in resolving

conflicts in East Timor. Malaysia regards the question of East Timor, which the United Nations continles to recognise as a territory administered by Lisbon, Indonesia's internal

affair. Nevertheless, the non-governmental organisations preparing to stage the conference, which is called the Second Asia Pacific Conferappealed to Kuala Lumpur to become involved in finding a peaceful solution to the

conflict in the territory. "Malaysia has strived for peaceful resolutions of the long-running conflicts in Palestine, South Africa, Cambodia. Rosnia and (the Philippine island of) Mindanao. We should take a similar stand to support a speedy and peaceful solution to the East Timor situation." Mr Sanusi Osman, a representative for the conference organisers said.

But far from getting involved, Malaysia appears keen to divorce itself from the problem as emphatically as possible. Mr Megat Junid, deputy home minister, said the cabinet was concerned that the conference - if it goes ahead - would damp a scheduled visit to Indonesia by Dr Mahathir.

Some representatives of the human rights groups said they were worried that Malaysia might now try to ban the conference. They added that they were keeping secret the names of people who planned to attend from abroad, in case the authorities attempted to bar them from entering the

By Farhan Bokhari

Pakistan's army remained silent yesterday, but the presence of troops outside the prime minister's residence spoke volumes.

The soldiers did what they have prime minister. The excesses of secome so accustomed to over a the civilian rulers made him at become so accustomed to over a difficult decade of transition to democracy. Tired and frustrated with Ms Benazir Bhutto's incompetence, the generals encouraged President Farooq Leghari to dismiss his long-time friend.

The army is indisputably the force behind President Leghari. allowing him to be assertive in front of Ms Bhutto. It is also the real power in Pakistani politics. and some distaste the efforts of radio and television stations, air-

civilian politicians to govern. General Jahanghir Karamath, a respected career-soldier who became chief of the army staff in 1995, has privately expressed his displeasure to president and one with the president. That

made yesterday's move easy. Senior officials predictably sought to play down the mili-tary's role yesterday. Though the president enjoys a constitutional prerogative to dismiss a government, there was a sense of a "military coup" in Islamabad. Besides Ms Bhutto's residence, soldiers kept close vigil at other important installations such as

ports and government offices. Dissatisfaction has run deep among both the generals and the ruled. In recent weeks massed demonstrations, from the business classes to mullahs, took to the streets to demand Ms Bhutto's removal. Before dawn yesterday the soldiers moved in. "This move, although constitutional, could not have occurred without the tacit approval of the army," said Ms Nasim Zehra, a

leading security analyst. Officials say the soldiers will be withdrawn within days, once the new government settles in. Army officers were careful yesterday to avoid gestures suggesting a more enduring and open assumption of

The army has governed Pakistan for more than half its existence as an independent state. most recently for the 11 years to August 1988 under the leadership of General Zia ul-Haq. His death in an air crash paved the way for

the transition to democracy. The soldiers are a pampered class. Defence spending amounts to 26 per cent of this year's budget. That largesse continues in spite of suggestions by foreign donors that Pakistan should reduce its "non-developmental" expenditure, a euphemism for defence spending. Pakistan has resisted defence cuts, arguing its national security was under threat from its arch rival, India.

The economic pressures on

defence have also mounted with a 1990 US decision to cut all military and economic aid to Pakistan over allegations that the country was producing nuclear weapons. Pakistan received roughly \$7bn in US aid from 1980 to 1990.

Pakistan's economic woes alone are sufficient to force the generals to avoid contemplating a direct takeover of the country, as this would frighten away foreign investors, "Pakistan could find itself as isolated as Burma if that was ever to happen," said a western diplomat. "The army is an important institution but it's one which recognises its limitations." Yesterday, it brushed aside any

perceived limitations. "The army

is very visible in this change. It suggests that they are fully dence, won the Nobel Peace behind the president." Ms Asma Prize along with a fellow Jehanghir, a leading human rights lawyer, said.

In recent years, the army has been keen to seek a larger role in UN peacekeeping operations worldwide in a gesture to raise the country's global profile while also allowing Pakistani troops to work with troops from other countries.

It has also been rewarded recently for staying on the sidelines. The 1990 sanctions on Pakistan imposed by the US were eased for the first time this year when Washington agreed to allow the delivery of some of the \$1.4bn worth of blocked equipment.

were aimed at paving the

## Strike halts shipments of Thai air cargo

By Ted Bardacke in Bangkok

A strike by more than 1,000 air cargo handlers has blocked shipments of nearly three-quarters of outbound cargo from Bangkok's Don Muang airport and forced into the open a controversial government decision to privatise the cargo services of state-owned Thai Airways

The workers, employees of the Cargo and Mail Department of Thai Airways, went on strike on Monday. Most outbound cargo of Thai Airways and other regional carriers which rely on Thai Airways ground staff including Cathay Pacific Airways, Singapore Airlines, China Airlines, Korean Airlines and Malaysian Airlines remained locked in storage

airports around the world. The strike comes at a delicate time for Thai exporters, who are rushing to fill large Christmas orders of textiles and electronics at a time when the country's export growth rate has fallen to the lowest level in a decade.

areas. Thai Airways was not

accepting inbound cargo at

Workers are protesting against a cabinet decision to give Thai Airways' cargo business to a new company in which Thai Airways would be the largest single shareholder but be deprived majority control. The workers fear they will lose benefits and eventually be made redundant.

The airline said its cargo department would carry on normal operations after the

new cargo company was established and that employees would keep their jobs with the airline. But a company spokesperson could not say what the workers' jobs would be if the new company takes over the operations of the cargo The Thai military's influ-

department, as expected. The decision to separate Thai Airways' cargo service from its passenger operations, originally made by the former government of Chuan Leekpai in 1994, had been hailed by exporters as a way to streamline operations Don Muang airport. Labour peace was expected as Thai Airways was to hold a controlling 49 per cent stake in the new company and private sector partners

an open tender process. But without calling bids, the lame-duck government of Mr Banharn Silpa-archa decided to lower Thai Airways' stake to 35 per cent, with an additional 5 per cent for Thai Airways employees. A controlling stake was awarded to a group led by a private company, Commercial Transport International (26 per cent) and Thai Mili-

were to be selected through

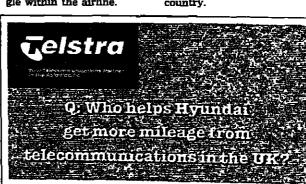

tary Bank (24 per cent). A main shareholder of Commercial Transport International. Mr Anusak Indara puvasak, is also director general of the state-owned shipping company. Thai Maritime Navigation, an organisation which has a monopoly on military transport under the supervision of the ministry of communications and transport.

costs for the borrower. The Kazakhstan ratings disappointed some western economists and business

executives in Almaty. The World Bank, the European Bank for Reconstruction and Development and Japan, backed the country's reforms last week by pledging nearly \$1.35bn for balance of payments, technical and investment support in

IBCA said Kazakhstan's potential as, an oil and gas producer, with reserves rivalling those of Kuwait. was enormous, but being landlocked made it dependent on its neighbours for access to western markets. The planned pipeline through Russia to the Black Sea would raise oil exports by over 50 per cent within

Russia was "likely to continue to exercise enormous economy and had recently cut off the electricity in northern and eastern Kazakhstan, said IBCA.

Kazakhstan, independent since December 1991, had slipped into arrears twice in munist countries of east past three years, and lack of a track record as an independent state was "a key constraint" on its credit rating. S&P said "a sharp tightening" of fiscal and monetary

policies had allowed Kazakh-A strong rating, implying stan to stabilise its economy usually means lower funding the rate of inflation.

## Kazakhstan Goma looters reveal facade behind regime gets its first Michela Wrong visits the east Zaire town now in the hands of rebels

The presidential villa on the outskirts of the eastern Zairean town of Goma, in the hands of rebel forces and Rwandan soldiers who routed the army at the weekend, had been pillaged.

But the looters found little of any real value, because almost everything in the apparently sumptuous estate, perched on the banks of Lake Kivu, was fake. Ornate chandeliers, gilt

mirrors and a brass wall clock decked with eagles and lions lay piled in the corridor, ready for loading. A suspiciously new Oriental rug had been rolled up and a portrait of "the Guide" himself, moulded from Zairean copper, was propped against But no one had bothered

to move the huge dining table, moulded from marbleimitation plastic, the four "Ming" vases, with their price labels still stuck to them, or the Romanesque plinths inlaid with artificial

## Sanctions make for a mixed-up market in Iraq

Roula Khalaf penetrates the secrets of Baghdad's bourse

n the floor of the officials said the market event moving the market against the dinar as well as yesterday was the US presidential election. Investors To prevent the market crashgathered behind a glass win- ing, the government allows the men and women brokers orders to sell.

On the surface, the Baghdad stock exchange is an ordinary capital market, more lively than many others in the Arab world. Opened in 1992, one year after United Nations sanctions were imposed in Iraq, the market has 98 listed companies and a capitalisation of about ID84bn. This equates to about \$47m at the current rate of 1,800 dinars to the dollar on the black market where most dollars are traded in Baghdad.

Companies in sectors ranging from industry to tourism issue annual reports and crowds of investors flock to the exchange twice a week for a two-hour session. Many of the companies shifted to private hands during a brief privatisation drive in the late 1980s. Shares were traded unofficially for years among friends in social clubs and eventually moved on to the bourse. Stock exchange officials said investor interest had grown so much that the bourse was being moved

to a larger location. But, like everything else in Baghdad, the stock exchange, where stocks are quoted in dinars, does not respond to rational market forces. Investors pay little attention to revenues and earnings of companies or to economic indicators; the official Iraqi economy was devastated by sanctions and the government does not publish

official statistics. Instead, the market is speculative. It offers another way of playing the US dol- turns into a broker, what lar's fluctuation against the you get is a mix-up, and the local currency. Strangely, economy here is mixed up.

Baghdad stock seems to decline when the exchange, the main dollar is expected to rise when it is expected to fall. cent in either direction during every session.

The US election should since sanctions, preventing Iraq from selfing its oil and from buying anything other than humanitarian goods. are not likely to be lifted in the near future, regardless of who sits in the White House

The oil-for-food deal frag agreed with the UN last May, allowing it to sell \$2bnmonths in exchange for food and medicine, has been put on hold since Irag's incurin late August. The UN has said the north remains too unstable for the deal to go

through. Mr Walid al Saadoun is a civil engineer who had to look for another line of work when sanctions were imposed and construction business dried up. He became one of the 46 brokers on the exchange. "It is not a particularly fruitful business, but at least it gives me

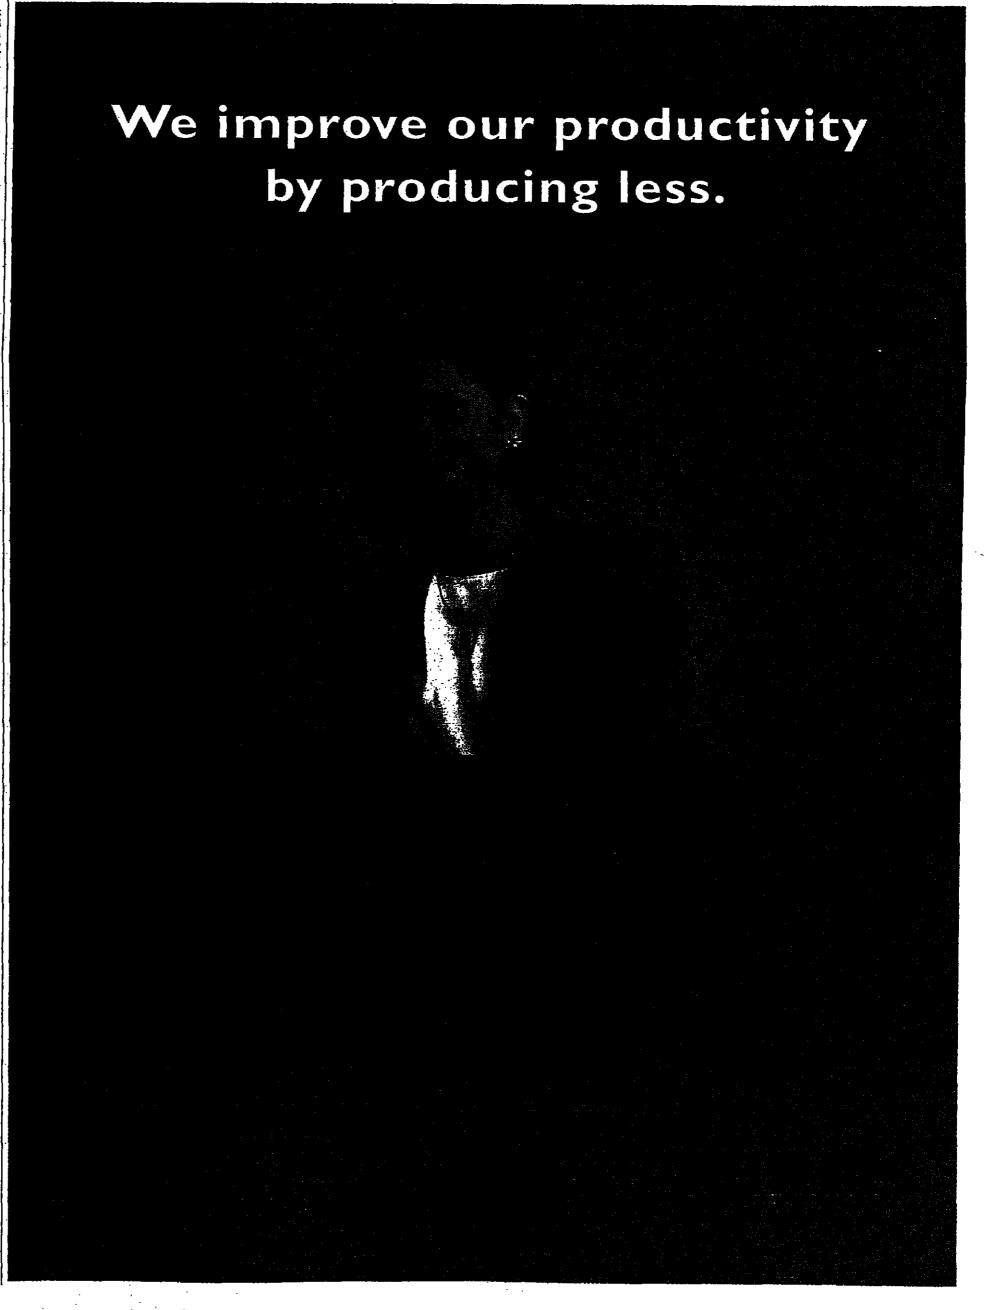

something to do," he said.

Mr al Saadoun said inve tors yesterday viewed the US election as good news, though he could not understand why. When investors in Baghdad anticipate positive developments, the dinar's black market value

So investors sell their shares in dinars because they expect to be able to buy more dollars with their dinars. "People prefer to hold dollars and measure their wealth against the dollar," Mr al Sasdoun said.

There are other speculapush the market down when they expect the dollar to rise. They sell their shares in dinars and buy dollars on the black market in order to resell them for more dinars at a later date. "The market falls on good and bad news, sald a stock exchange official. "It only goes up when the dollar value is stable."

Mr al Saadoun said the market's performance is understandable. sanctions force a doctor to work as a food wholesaler, a teacher becomes a texi driver and a civil engineer

## Blair takes hair advice to woo votes

By George Parker, Political Correspondent

Mr Tony Blair, leader of the main opposition Labour party, has flattened his bouf-fant hairstyle as part of a campaign to build bridges with Britain's women voters, who are less susceptible to his political charms than

Mr Blair's hairstyle was identified by Labour focus groups as one of the more frivolous explanations for his relative unpopularity with women Last month, a Mori opin-

ion poll showed that only 43 per cent of women were satisfied with his performance, compared with 60 per cent of

Senior Labour women MPs are advising Mr Blair on a strategy to recapture the female vote, fearing the gender gap has grown in recent months and could prove a serious handicap to the party's hopes of winning the next general election.

The difference in voting

Tony Blair is to visit more ine' environments

patterns between men and woman can be decisive. In some US states Mr Bill Clinton would be in trouble against Mr Bob Dole if men alone were allowed to vote, but the president typically enjoys a lead of 20 points or more among women

The Labour leader has agreed to undertake more high-profile visits to "feminine" environments, instead of to conferences where he is often surrounded by businessmen in suits. Tomorrow he will visit London's Great Ormond Street hospital for sick children with his wife, Cherle, a high-flying lawyer.

### UK NEWS DIGEST

### Call to curb [V violence

Mrs Virginia Bottomley, the chief national heritage minister and Mr Michael Howard, the home secretary. yesterday mounted a campaign against what they see as unacceptable levels of violence on television and in films

Mrs Bottomley wrote yesterday to the chairmen of the BBC, the Independent Television Commission and the Broadcasting Standards Council, calling urgent meetings to see what more can be done "to ensure that television programme makers and broadcasters take full account of the standards acceptable to today's viewers".

Sir Christopher Bland, chairman of the BBC, Sir George Russell, chairman of the ITC, and Lady Howe, chairman of the BSC, have been asked to submit a report by the end of this month saying what measures they have taken to deal with government concerns on violence, and any fur-

ther proposals.

The same request has been made by the home secretary to the British Board of Film Classification on violence in films, Mr Tom Sackville, home office minister, said that significant cuts in the levels of violence in videos and on television must be made.

### OXFORD UNIVERSITY

### Dons reject business school plans

Oxford dons yesterday dealt a surprise blow to the university's leadership by rejecting plans to build a £40m (\$65.2m) business school funded by Mr Wafic Said, the Saudi entrepreneur.

The university's congregation, or academic parliament, voted 258 to 214 against the siting of the school on a greenfield site at the heart of the city. The issue is now likely to be resolved by a postal ballot of more than 3,000 academics and administrators towards the end of the

Mr Alexander Murray, a history tutor at University College who led the opposition in congregation, said: "I am amazed and delighted by what has happened. I am very glad the university has recovered its integrity because it was in danger of losing it."

Proposals for the business school have proved controversial with academics, university staff and local councillors since Mr Sald announced his donation of £20m to build the new college in June.

### **■ SINGLE CURRENCY**

### Pro-Europeans warn City of risks

Pro-European MPs yesterday warned the City of London of the risks of the UK staying outside the single European currency as they launched a campaign laying out the positive case for monetary union.

The City could find the playing field decisively tilted against it," the MPs claimed in a document circulated to banks, financial institutions and industry. The pumphlet, "The other side of the coin", published by the European Movement, says there is a danger of the UK being outmanoeuvred in the negotiations over access to key part of the new financial system.

The MPs attempt to refute some of the "fanciful" allegations made by the opponents of UK membership. The European Movement's campaign was welcomed by Lord Kingsdown, former governor of the Bank of England, the UK central bank, as a "useful and pragmatic contribution

### ■ MUSIC BROADCASTING

### Plans to rival MTV Europe

As many as three consortia are considering plans to launch music cable and satellite television channels in the UK to rival MTV Europe, the pan-European music

Granada, the media and leisure concern, has held exploratory discussions with four of the UK's largest record companies about proposals to introduce a specialist music channel.

Virgin. Mr Richard Branson's leisure group, has begun negotiations with BSkyB, the satellite television venture, regarding proposals to establish a joint venture to run another music channel.

The BBC last week unveiled plans to launch a television version of Radio 1, its pop station, in a proposed joint venture with Flextech, the US-owned cable and satellite channel operator.

Established record companies approached by Granada are interested in increasing their involvement in broadcasting. The four - PolyGram of the Netherlands, the UK's EMI, Warner of the US and Japan's Sony - are already involved with Viva!, a German music channel which successfully competes against MTV Europe in that

### **■ CABLE TELEVISION**

### **Industry accuses satellite venture**

The cable industry yesterday accused British Sky Broadcasting, the satellite television venture, of impeding the entry of alternative channels and programme providers into the UK pay television market.

The complaint was made in a formal response to the Office of Fair Trading's consultation on the proposed new BSkyB "rate card" which would determine the wholesale price cable operators pay for BSkyB television channels. If the cable industry cannot persuade the OFT that the proposed rate card should be modified, it plans to push for a Monopolies and Mergers Commission inquiry and will also take the issue up with the European Commission in

### ■ PUBLIC TRANSPORT

### Operator to buy 914 new vehicles

FirstBus, the country's biggest bus operator, is buying 914 new vehicles as part of an £80m replacement programme over the next two years. It is the privatised industry's first substantial order for custom-made buses.

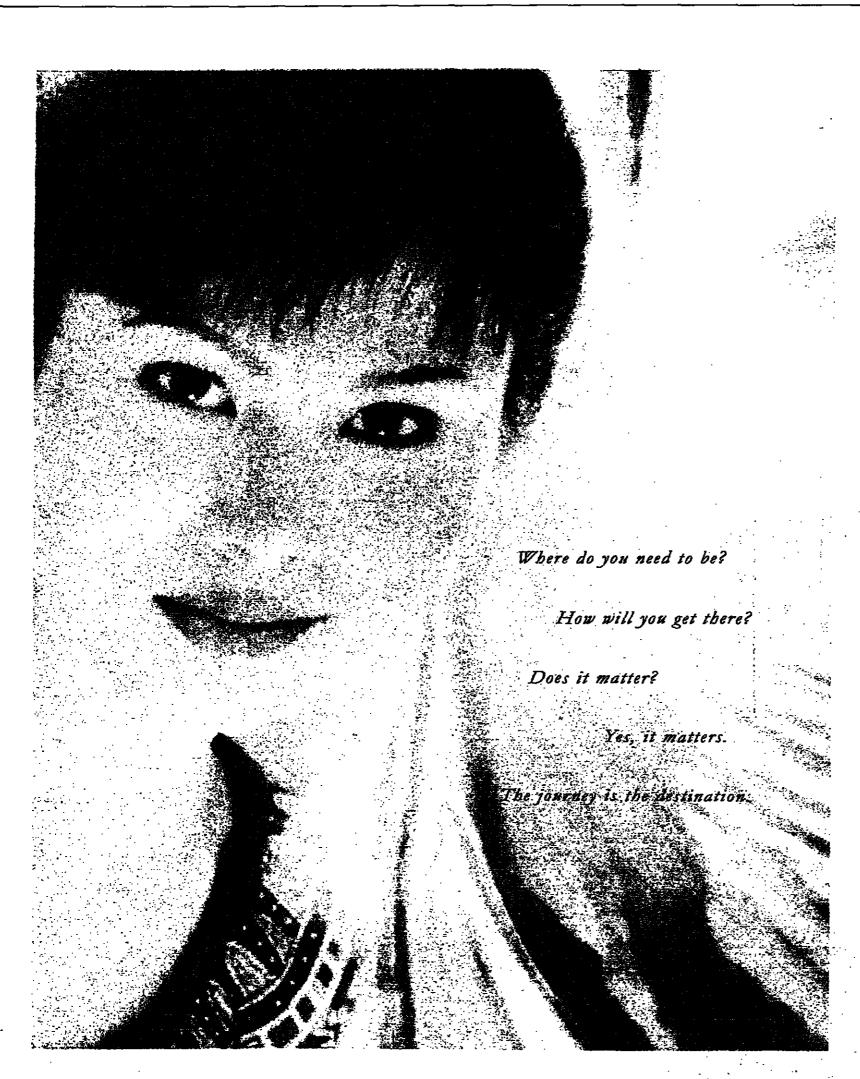

· The group, which this year acquired Greater Manchester bus company in the north-west and Strathclyde bus company in Scotland, has placed orders for 584 vehicles worth £50m, for the year ending March 31 1998. All the bus bodies will be made in the UK by Alexander of Scot-land, Wright of Northern keland and Plaxton of England The chassis will be made by manufacturers abroad, including Volvo, Scania and Mercedes. FirstBus, which commands 20 per cent of the UK bus market, said the new vehicles would be used to replace old buses in its existing

### ■ MANUFACTURING OUTPUT

### Data suggest recovery spreading

UK manufacturing output grew modestly last month, suggesting that the economic recovery is now spreading from the services sector to become more firmly entrenched in

Manufacturing output grew a seasonally adjusted 0.3 per cent in September, compared with a fall of 0.3 per cent in August, the Office for National Statistics said yesterday. Mr Simon Briscoe, an economist at Nikko, said the modest recovery in manufacturing output meant that there was no need for another interest rate increase. He said rates were not likely to change until after the general election, which is expected early in 1997. Graham Bowley

### **NEWS:** UK

## rules out big cuts in tax

By Robert Peston, Political Editor

The UK cabinet yesterday agreed to increase public spending in real terms next year, at the price of ruling out big tax cuts in the forthcoming Budget.

The prevailing view at the top level of government is that the electoral prospects of the ruling Conservative party will not be significantly enhanced by substantial income tax reductions, but that a schools or health service funding crisis would be very damaging.

Ministers approved increased allocations for hospitals, schools and the police. These will not be off-set by swingeing cuts in any big spending departments.

the second second second second

Title MINISTRA

A senior member of the government said yesterday that the main spending total used in the annual expenditure negotiations - called the control total - is likely to be about £1.5bn (\$2.44bn) less than the £268.2bn pen-

cilled in a year ago. This would represent a cash increase of almost £7bn on the current year's planning total and is more than that needed to keep pace with the 2.25 per cent inflation rate predicted.

The outcome represents a victory for Whitehall's big spenders over Mr William Waldegrave, the Treasury's chief minister in charge of keeping public expenditure under control. In the early autumn, he had hoped to shave £3bn from the planned

The settlement means net tax cuts are unlikely to exceed £2bn, ruling out any prospect that the 24p basic rate of income tax will be cut by more than 1p.

Among the big winners was the health department, which secured an estimated additional £600m for hospitals on top of the £34.2bn

earmarked. education minister, obtained

Michael Portillo: squeezed

a relatively generous settlement for schools, at the expense of a squeeze on uniresources for training and enterprise councils. Mr Michael Howard, the home affairs minister, was said to be delighted by the allocation for the police and prisons. However the Treasury

won a partial victory over the defence minister. Mr Michael Portillo, who faced intense pressure to cut military support services. A colleague of Mr Portillo's said yesterday that although he had been forced to accept a squeeze, the stability of the armed forces would not be undermined.

In social security - the biggest spender with a £90bn budget - cash payments to single parents will be frozen for a second successive year and there will be a further crackdown on fraud. However, more radical measures to trim benefit entitlements have been dropped because of the risk they would fail to get through parliament. given the government's slim majority.

## Spending rise Manchester chooses \$815m rebuild plan

.... By Richard Wolffe in Manchester

Manchester, in north-west England, yesterday launched an ambitious £500m (\$815m) four-year project to rebuild its centre, which was destroyed by an IRA bomb in

The new city centre will feature Millennium Centre modelled on the Pompidou complex in Paris, a pedestrian street leading to the cathedral, and a radical redesign of the Arndale centre, the city's main shopping complex.

A panel of business and political leaders yesterday announced the winning team of architects and urban designers which will mastermind the reconstruction. Led by EDAW of London, the team beat 27 rivals to redesign 23.6 hectares of the city centre, extending well beyond the buildings damaged by

the terrorist attack. More than 200 people were injured by the 1,500kg bomb, which devastated one of the UK's busiest shopping areas.

Some 670 businesses had their

premises destroyed, including UK retailer Marks and Spencer. Most have found temporary

accommodation near the Arndale centre. These including M&S, which plans to build its largest UK store close to the bomb site.

Sir Alan Cockshaw, chairman of Manchester's judging panel, said: We want to create the very best city centre in the whole of Europe. fit for the 21st century, and one which the people of Manchester

can be very proud of." The government is expected to

struction, particularly for infrastructure projects. Ministers have already diverted £20m of European Union funds from the wider north-west region into the

But much of the finance is likely to come from insurance claims and £400m is expected from the private sector. The project's leaders will also attempt to convince five landlords - who control most of the centre - to renovate or demolish their own buildings. They said they

fund about £100m of the recon- were prepared to use compulsory purchase orders as a last resort.

The most dramatic part of the new city centre involves the demolition of the unpopular Shambles Square and the sideways move of the medieval Shambles pub, which stands on piles.

The 1960s Arndale centre is to be redesigned with glazed walkways and a covered Winter Garden.

Electric shuttle buses will ferry shoppers from car parks and tram stops into the heart of the new city

## Scheme helps employment data shine

Results of US-style workfare encourage its expansion

est Britain has come to US-style workfare. is set for rapid expansion following early evidence from a government pilot scheme in two different parts of Britain in which recipients were obliged to work for benefit

Two pilot schemes for up to 8,000 people - at Medway and Maidstone in Kent, in the south-east of the country, and in Hull, in the north-east - have resulted in a high proportion of candidates leaving the unemploy-ment register, although only a small number are known to have jobs.

Mrs Gillian Shephard, the chief education and employment minister, who will detail more of the expansion plans this week, said: "The early results from the first pilots have been impressive. Project Work is having a significant effect in helping people who have been out of work for a very long time and who really want a job, and in weeding out those who don't."

Under the scheme, people aged between 18 and 50 who have been unemployed for

roject Work, the clos- 13 weeks of intensive help in searching for a job, followed by 13 weeks of compulsory work experience. Those going on to work experience receive an allowance equal to their benefit plus £10 (\$16.30) per week. Refusal to attend results in loss of state benefit.

So far, 2.481 people have been on the pilot scheme at Medway and Maidstone. To date, 20 per cent have left the register after the first 13 weeks, and a further 37 per cent have left the register at the second, compulsory work experience stage. Similar results have been eported from Hull.

Of the Kent clients, only 120 are known to have filled vacancies advertised in a Jobcentre (state employment office). More may have found jobs and not notified the Employment Service, but even so the figures seem at odds with Mrs Shephard's recent claim that "many have found jobs".

She seemed much closer to the mark when she said: "A noticeably high number have simply ended their claim on referral to mandatory work experience. This suggests that the approach - to another 100,000 people

Enjoying their work: Tilly March (in the stripes) and Grace Beament at the old people's centre in Maidstone

is particularly effective in deterring those whose claims are not genuine."

Mr Bob Keen, project manager at Maidstone, declined to speculate about people's reasons for leaving the register, but added: "There is a bit of carrot and stick. The black economy is always

Mrs Shephard first chose to flag the expansion of Project Work at the ruling Conservative party's conference in September, even though the pilots will run until July. It may seem rash to spend a further £70m in expanding the scheme - the move is planned for early next year

across the country before the pilots have been fully evaluated, but the potential rapid payback in terms of lower unemployment figures has clearly proved to be

irresistible. The Trades Union Congress has called Project Work a step down the road to workfare. The main opposition Labour party

described it as a gimmick. Labour has also criticised the lack of training and education on the scheme. But the party has said it is ready to remove benefit from unemployed people aged under 25 who refuse offers of a job or more education.

Given Labour's determina-

tion to root out benefit fraud, the opposition will also be taking careful note of the numbers leaving the reg-

But Project Work is not just about forcing people off the register. It can also provide inspiration and confidence, according to Mr Geoff Jones, training manager for Community Link, one of the private sector organisations which is organising the work experience element.

"Lots of people have had so many rejections that they have lost the will to look for work," he said. "This gives them hope - they have just got into a rut of not applying for work."

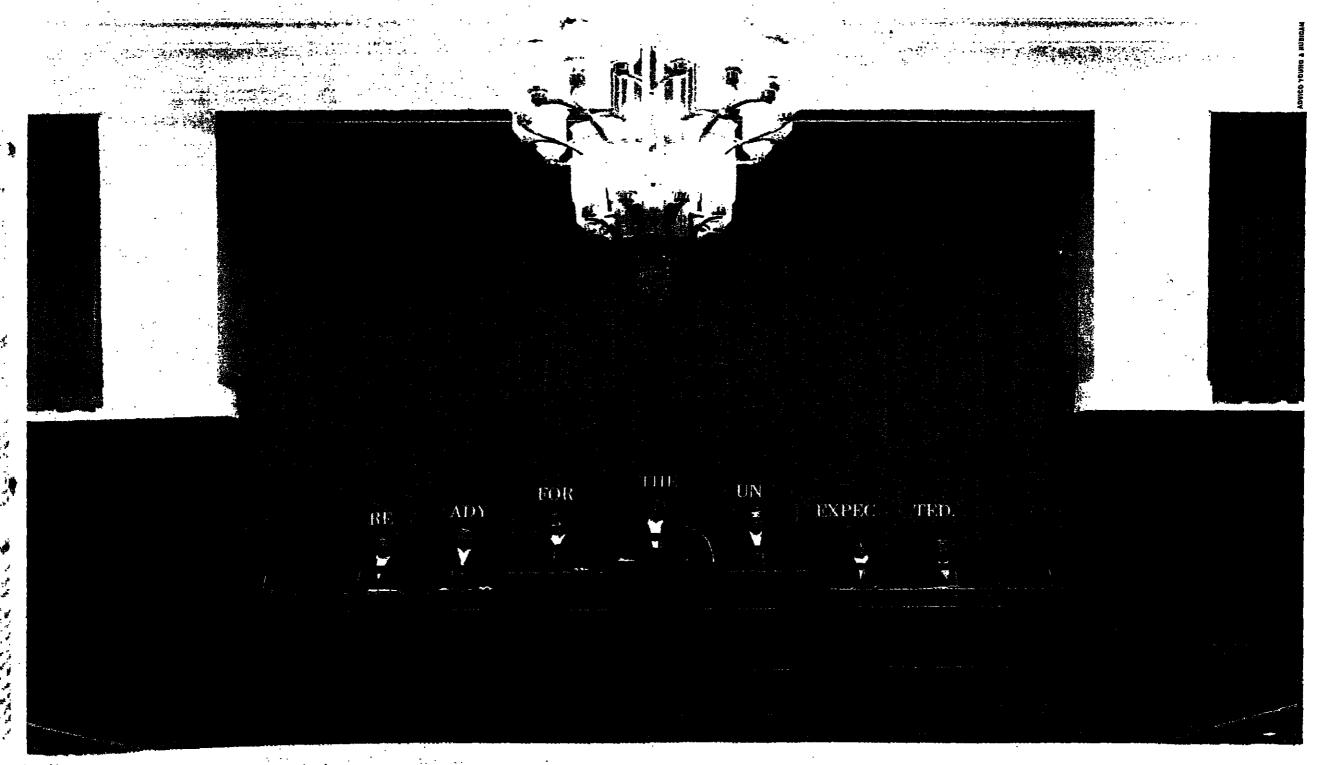

Ms Tilly March, 22, has not worked since leaving school. She is now working at an Age Concern day care centre in Maidstone, helping in the kitchen and caring for the elderly clients. She said: "I didn't like being forced into

it, but it's all right once

you're here." Also at Age Concern's centre, Ms Grace Beament, 23. has been unemployed for two years, having previously worked at another old people's home she did not like. She said: "I like it here. It is good experience and I

hope it will get me a good

**Andrew Bolger** 

Once upon a time, a company had a clear-cut purpose and a simple set of responsibilities: produce, prosper, pay taxes. Over the years, however, corporate life has been getting tougher. A growing number of interests have to be reconciled. How can you satisfy consumers. shareholders, employees, the

environment, the community and the state all at the same time? With the threats of liability law suits multiplying, traditional insurance thinking is

not the answer. Instead, reliable methods of risk analysis and risk engineering must be systematically applied. A leading global insurer is more

likely to have the professionalism and strength to provide them to the same high standard worldwide. And the experience to show you results.

products from light bulbs to loo paper. But, in the name of a good cause, there is a risk that industry is being alienated and consumers are becoming confused.

The root of the problem is the growth in the number of eco-labels - markings awarded by the European Union only to products which meet environmentally friendly standards.

The labels have a dual aim: to encourage industry to market greener products and to give consumers information about products which are environmentally less damaging.

But do eco-labels fulfil these two goals? The question is being asked more urgently following the European Commission's recent decision to press ahead with two new eco-labels - one for copy paper and the other for

refrigerators.
The EU eco-label system is voluntary, the idea being that market forces will lead to wider use once a few companies begin actively using them as marketing tools. "The idea is to encourage competition between companies by getting them to fit eco-labelling into their business strategy," says one EU

The criteria needed to qualify for the EU's ecoConfusion of profusion

labels have been drawn up by the Commission for 11 products since the scheme's inception four years ago. The process has involved long consultations with industry federations, companies and environmental pressure groups. The products include washing machines, paper kitchen rolls, laundry detergents, paints and var-nishes, bed-linen and T-shirts, copying paper, light bulbs and refrigerators. The Commission is working on plans to extend the regime to footwear, stationery products, batteries and personal

computers. But the EU regime has been dogged by controversy. Industry is divided over the merits of the scheme. As a result only a small number of companies, 11 in all, have applied for the awards in some of the product categories. For some products. such as textiles and dishwashers, no applications

soon be feeling on top of the world.

some and costly and that the Goss admits that "in praccriteria for the first batch of tice the EU label is a good thing. Harmonisation would help. It is impossible to sell something with 15 labels on

But, he adds, the EU schemes are unattractive to industry, another leading contributing factor to the failure of the EU labels. Criticisms of the EU scheme vary from industry to industry, but some common points are that it is cumber-

products were poorly defined and impractical. "The Commission was often on a collision course

with industry when it first set up the scheme. It has now realised that the system cannot work unless it has industry on its side." says Sundberg. A prime example of poorly defined criteria was the eco-

label for dishwashers. First introduced in late 1993, the scheme attracted no applicants. "The criteria for water consumption were too low. On the other hand, the performance criteria were too high. There was absolutely no incentive to apply," says an official from a leading Technology manufacturer.

more consistent approach to week

broader overhaul of the EU's eco-labelling regime which includes streamlining the application and award process. Companies complain that it takes too long for applications to be processed by the national bodies which manage the scheme under the umbrella of the European Eco-label Organisation. The Commission will also address the concern that the labels are too simplistic. "It is no good offering a simply black-and-white choice. A product might be less green

make sure the criteria are practical and technically applicable." an EU official

says.

The changes are part of a

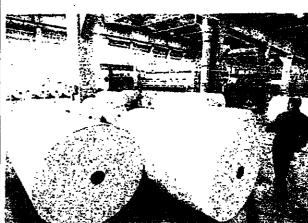

because it has not got the label, but it does not mean it is not green," says Sundberg. Some sectors argue the labels should offer some differentiation by grading products. This could be modelled on the EU's compulsory label for energy consump tion which grades products according to the rate at which they use energy.

Despite all the difficulties there is a strong body of opinion that the EU's ecolabelling will attract wider interest in the longer term. "The EU scheme is gathering momentum. The Commission has gone through a learning process and is now taking a more pragmatic approach. There will probably never be a stampede for eco-labels, but I believe they will become increasingly popular," says Goss...

## Paper warfare

ontroversy still rages over the European decision to press ahead with an eco-label for copying

This particular eco-label has provoked more passion than any of its predecessors. drawing fire from the paper industry on both sides of the

Eco-labels for the paper sector are not new companies have already applied for the EU's kitchen towels and toilet paper label. Fort Sterling, a British company, uses the EU's eco-label on three makes of kitchen towel and toilet paper.

In Scandinavia more than 70 per cent of some paper products carry the local 'white swan" eco-label. Leading paper retailers say the labels bave become integral marketing tool for a majority of pulp and paper

"The labels help us to market products. Most big buyers want to know whether we carry the white swan before they will buy the product," says one leading Swedish paper retailer.

But even Scandinavian paper producers are rethinking their eco-label policies. The reason is that the criteria for paper eco-labels differ from those for all other products in that they target the production process, not just the product

"Companies are obliged to act on the production process. In all the previous cases of eco-labelling we bave only called for modifications to the product." an EU official explains.

The criteria which companies are invited to meet to qualify for the EU label include cutting chlorine and sulphur emissions as well as energy consumption during the manufacturing process. Paper milis must also

meet water effluent

limits. An additional criterion is that companies must be able to provide documentary proof that the product comes from wood fibre that has been grown in environmentally-protecte forests. The Commission believes this will encourage sustainable forest

management. But leading paper manufacturers complain that it is impossible to keep modifying production techniques to meet criteria which are revised every two to three years.

"We work in a capital-intensive industry. The technical life of equipment is 10 to 20 years It is not possible to alter this every few years," says Carl-Johan Alfthan. technology director for Modo Paper Husum in .

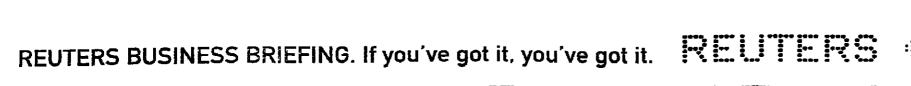

7 he Confederation of European Paper Industries also believes the criteria discriminate against some producers because the favour companies which produce pulp and paper against those that buy in their pulp. In addition, the America

Forest and Paper Association believes the labels could pose a severe trade barrier and are pressing the US administration to refer the issue to the World Trade Organisation

But EU officials believe that the federations are more hostile to the eco-label scheme than the companies

they represent. The eco-labels are designed to create competition. Federations do not like encouraging competition between their members. It is not something that they can openly support," says one EU official.

your business needs to stay ahead.

### he old idea of television making seasonal programme changes three times a year, discarding whole lists of series and introducing new ones, is virtually dead. Network autumn as an excuse for extra ly's World Tour of Australia brain", was fascinating a disthese days new series start every

controllers still use the arrival of ballyhoo about new pro-grammes, but the truth is that week. My notebook for last week includes nine new series and, using television's own established practice, we shall employ a points system and consider them in reverse order.

One out of 10: Sometime, Never (ITV Sundays). A half hour comedy based upon such tired ideas that you wonder how it got beyond the planning stage. Max, a loud-mouthed female teacher, is passed over for promotion in favour of a Thatcherite younger woman whose ambition is (typically contrived joke) "to close a school of her own one day". Max lives in the basement of a house owned by her friend Bernice. Both women are stone-agé feminists. Bernice cannot leave Kevin to feed their children because "Last time I did we had to have their stomachs pumped and I found sawdust".

Two out of 10: Billy Connol-

Paper

### Television/Christopher Dunkley

## Nine new shows – in reverse order

(BBC1 Mondays). The series set in Scotland, combining travelogue scenes of Connolly visiting old haunts with excerpts from his one-man shows was nearly very good. The poignancy of the childhood memories and the exultant swearing in the effortlessly funny stage act sparked off one another splendidly. The attempt to do the same thing in Australia is nearly very bad. Councily now exploits his own celebrity status, enthuses over everything like David Bellamy on speed - "Un-be-lieve able!" he bellows repeatedly at the Sydney Harbour Bridge - and works ancient material to death, Scorning "person-hole-covers" was funny in 1969.

■ Three out of 10: The Mind Traveller (BBC2 Thursdays). Oliver Sacks also comes danger-ously close to celebrating his own celebrity. The subject of this opening programme, in a series promising a journey "through the mysterious folds of the

ease capable of taking very mild or appallingly extreme forms, and limited to a tiny area of Guam. But Sacks' royal progress among the sufferers put you in mind of a ward round by James Robertson Justice. The result was television's version of a rar-

Four out of 10: Staying

Alive (TTV Fridays). ITV decided that since its nine o'clock drama slot had now contained 926 crime series the time had come for a hospital series, there having been a mere 874 of those. Hence this bedpan saga set in the Gilmore Hospital, wittily known as the Kill More. Episode 1, which was a sort of Magnificent Seven round-up with all the characters being introduced, tried to achieve the speed and impact of ER but felt instead like Casualty. Formula drama, proficiently made, it will probably do its job and hold up the ratings for the advertisers in this key

show which takes the idea of Treasure. Hunt, adds more money, more people dashing around the country, pursuers on the lines of The Fugitive, expert commentators in the studio (a former member of the Flying Squad and double agent Oleg Gordievsky) and as presenter. for no obvious reason, right wing newspaper columnist Richard Littlejohn. The determination to inject drama by arranging to have the hunters close behind the hunted while the programme is on the air looks strained, but if Boy Scout wide games are your thing you may enjoy this.

Stx out of 10: Accused (BBC1 Sundays). Yet another courtroom drama, looking remarkably like Granada's Crown Court. Nobody would plan for a half-hour drama series to run from 11.35 until after midnight on a Sunday, so something must have gone wrong here. Too

- Five out of 10: Wanted downbeat? The opening story of (Channel 4 Sundays). A game a young heroin addicted prostitute, trying but failing to break away from an evil pimp, was certainly not the merriest way to end the weekend. But Christopher Reason's script was taut, and the acting was good.

■ Seven out of 10: Where's Elvis This Week? (BBC2 Sunday). British chat shows are in the doldrums because producers have focused on the presenters instead of the guests and very few presenters are up to it. This series goes back to the idea of concentrating on the guests. Better still it has a new wheeze: to interpret the Americans for the British and vice versa. Made in New York, with an American host (Jon Stewart, bright and capable) it has two American guests and two British who try to sort out just how we come to be two cultures divided by a single language. This week's subjects – fitness, obesity, sitcoms - worked well, although the British guests, Martin Clunes and David

Baddiel, were much livelier than their American counterparts.

■ Right out of 10: Third Rock From The Sun (BBC2 Thursdays). An American comedy which sounded doubtful but proves remarkably effective. Here is a sitcom which actually depends for its com upon a strong and unusual sit: four aliens assume human form to study the human race. Portraying human habits, social conventions and emotions in literal fashion, as seen through the eyes of an alien, does make homo sapiens look like homo idioticus. Mr Spock has been milking the gag for decades in Star Trek, but it is still funny. A male alien at a party kisses a female guest who slaps his face, so when he leaves and the hostess pecks him goodbye on the cheek he slaps her confidently round the chops. A female alien who starts crying is asked by a fellow alien "What are you doing?" and replies incredulously "Leaking apparently", and so on. Funny.

Wednesdays). A verité documentary series about life in the area of London's West End which spe cialises in strip joints, restaurants, prostitution, the cinema industry and much besides. I began going to Soho to buy secondhand books when I was 11. Today I record a radio programme once a week in a Soho basement. In the intervening 40 years people have repeatedly told me that "Soho isn't what it was" and they are right. That is its strength and part of its charm: immigrants, wannabes, crooks and geniuses are always passing through. Monday's epi-sode showed the Soho synagogue closing, which was sad, but Christopher Terrill who has made this wonderfully fluid and entertaining series on a modern lightweight camera, seemingly virtually alone, understands his subject well enough to know that something else will open. Via this series we already know Danny the drag artist and Gerard the director at the Raymond Revuebar as well as viewers know the characters in soap operas. Why end Soho Stories? Just run it three times a week indefinitely: the world's first

Nine out of 10: Soho Stories

(BBC2 Mondays, Tuesdays &

Focus on non-verbal effects: Rachel Sanders as Ariel in Shared Experience's new production Theatre/Alastair Macaulay is dismaying how seldom

## This 'Tempest'

with which they are revived. Actors and directors here behave in Shakehits the rocks speare as they seldom do, curiously, in Ben Jonson or Marlowe; they treat him as a too-familiar premise for fancy performing style, for striking visual effects, for clever reinterons - but they cannot be bothered to tell the stories in an cal A mime prologue showed a sexinnocent way that will help newcom- ual encounter between Caliban and ers to his plays. Miranda interrupted by Prospero. The new Shared Experience stag-You could scarcely bear Caliban's transcendent speech of how "The isle is full of noises" because you could not get past the semi-strangulated vocal tone and English-as-a-sec-

ing of The Tempest, mildly pretentious and extremely dull, is just the latest example of this depressing and decadent trend. Watching it, you cannot help but discuss the things Shared Experience have chosen to read into or impose upon Shakespeare; but there is almost nothing to be said about the actual words that Shakespeare wrote, for these are so flatly (and artificially and crudely) delivered that they reach your ear dead, stillborn. This kind of production usually angers me. On this occasion, since I watched it with three friends who were seeing The Tempest for the first time, I felt also

Shakespeare's plays are alive on the British stage today,

despite the great frequency

Here, what we were encouraged to

focus on was all non-verbal: effects praises her, my friends realised they had been speaking. There were worse than this: Alonso, Sebastian, Gonzalo, Antonio. The freshest speaking came from Lucas Hare in the smallest roles.

ut why blame individual actors? Nancy Meckler, artistic director of the company and director of this production, must take responsibility. In recent years, I have seen Michael Cashman play several Shakespearian roles. As Prospero in this production, he takes further the worst tendency he has shown in them steady monotony of utterance without any sign of his real virtues as an interpreter. Hardly had the play begun than, by chanting his long narration to Miranda in ashgrey tones and leaden emphasis of metre, he lost his audience and

delivered a death-blow to the play. An entirely meagre performance.

Meanwhile, of course, physicality and what people now call "theatricality" abounded. Prospero and others played meaningfully with meaningless piles of sand around the stage; the white sails of the stage; having tossed to show a tempest, became moving screens to effect changes of scene; the storm was also a dy waves and cr crosses of movement, some with ropes; and Miranda did several mock-exotic gestures to demonstrate her alien nature. Wind noises sounded through - drowning or muffling - several important episodes. Some of Peter Salem's music was far more poetically alive than any of the text.

Yes, Meckler's production has virtues, but they are virtues that Shared Experience (a company known for its physicality and in particular for its adaptations of novels) has stuck all over The Tempest like luggage labels. The play itself is left a lifeless and inconvenient blank which Shared Experience covers with style, style, style,

At the Wolsey Theatre, Ipswich, until November 9. Then touring.

### Concerts/David Murray

### Chailly in elegiac mood

cardo Chailly has been touring Spain with the London Symphony Orchestra, and at the Barbican last week he led them in a pair of concerts: early Britten with late Mahler on Wednesday, and on Thursday early Schoen-berg followed by the whole first act of Wagner's Die Walküre.

Not what one might expect from an Italian conductor; but Chailly's repertoire is uncommonly wide-ranging. To all this music he brought a full measure of conviction. and the LSO's playing for him was alert and beautiful. If there was anything slightly "foreign" in his readings, it was the near-absence of flexible Teutonic rubato, at least in the nonoperatic music: Chailly likes very steady tempi.

So treated, Britten's Sinfonia da Requiem sounded particularly elegiac and distanced, almost marmoreal no mote of hysteria in the "Dies irae", and only temperMabler's Tenth Symphony, played here in the version completed by Deryck Cooke, Berthold Goldschmidt and the Matthews brothers, was infinitely melancholy and limpid. Its extraordinary dissonant counterpoints became transparent, and the finale ethereally poignant.

choenberg's Verklärte Nacht shared the same tone on the next night. Little Sturm und Drang in the workings-out, but perfect poise and gentle radiance in the final "transfiguration"; Chailly used Schoenberg's later, subtler transcription (1943) of the sextet for string band, and made all its details glow.

In the long Walkitre act he supplied richly sensitive support for his three singers. His Sieglinde was the young Swedish soprano Katarina Dalayman, who made an enormous impression: absodelicacy as and when will

timbre (which always suits this role). Better German would help; in that respect. Wolfgang Schmidt's superb diction as Siegmund left Dalayman's words sounding disappointingly muzzy. Schmidt's intelligent, thor

oughly professional performance grew more impressive as the act progressed. His tenor has a hard ring, and in forte a distinct component of paint-stripper; but he was tirelessly equal to the formidable demands of the role, and managed to shift into a softer, gentler mode for a few blessed moments.

By contrast Gudjon Oskarsson sang the brutal Hunding in a most mellifluous, unthreatening bass - a pleasure to hear, if not exactly a vintage brute. Musically, this was an outstanding account of one of the most inspired acts of the Ring; and I should add special thanks to the LSO cellos, who seized their sumptulute confidence, power and ous opportunities with a

### Bottomley argues the heritage case

eritage secretary ing the case for Heritage. Virginia Bottomley is in Leeds today, telling the British Urban Regeneration Association how the arts and life into depressed inner cities. She is speaking at the new Royal Armouries Museum, one of the few success stories from the Private Finance Initiative, and the most ambitious development in a city that has gladly embraced tourism and the arts after the decline in its textile industry.

But Bottomley's words are not for the converted but for the scentical in the Treasury. At the last moment she is still trying to influence the Budget on November 26. As things stand now her own budget at Heritage, of 2960m, will be cut to pay for more hospital beds and reductions in taxes. She faces a hard task argu-

The Arts Council is terrified that its promised reduction of £3.2m for 1997-98, leaving it with just under £183m, will be greater. Some pessiforecast a £10m incision, which would force the choices, protecting some while sacrificing others, perhaps to closure. In the event Bottomley might keep the grant reduction to £5m.

The problem is that Bottomley is fighting her corner weighed down with lottery money: £2.4b of lottery funding has already been pumped - or promised - into communities; the arts alone have benefitted with £650m and heritage with £300m. Of course John Major, who cre-ated the lottery, pledged it would provide additional capital projects but its very presence makes it easy for the Treasury to insist that

Heritage takes its place with other ministries in financing lower taxes.

All Bottomley can do is to try and convert some lottery money into revenue funding schemes and the stabilisacouncil to make invidious tion fund, while pointing the arts towards other sources of income. Local authorities, with over £200m, give more to the arts than the Arts Council; the Foundation for Sport and the Arts is worth over £20m a year arts sponsorship weighs in with £80m; and there is the Single Regeneration money and European Development Funds. She wants to direct attention away from the Arts Council and its annual whinge. She also wants to make the point that at least she, and John Major, believe money to be concentrated on, in lottery funding of the arts.

## Deadly confusion

Western leaders could stop the turmoil in central Africa if they were willing to signal a readiness to intervene

Two letters in The Times yesterday sum up the European debate about central One, from a former British ambassador in the region, advocated military intervention in eastern

Zaire – by whom is not entirely clear, but apparently western countries "with African participation". The other, from a prolarger scale. fessor of politics, says that "order can only be restored in the Great Lakes region through the emergence of effective domestic regimes which are capable of governing responsibly", and that this process "can only

In this case the political sion of foreign troops". My instinct is to agree with the latter. The case for intervention was strongest two-and-a-half years ago in Rwanda, where the then deliberate genocide of the Tutsi minority, killing at least half a million before it was overthrown by the Tutsi-led Rwandan Patriotic Front. The outside world did nothing until it was too late. France then intervened in the area still controlled cleansing on an epic scale. by the defeated government. stopping the killing but also, perhaps unintention-

Since then the same killers have operated from UNsupplied refugee camps in Zaire. Rwanda has become the Israel of central Africa: a state led by survivors of genocide with an understandable contempt for world opinion" (except that of the US), who rely on their own military strength rather than diplomacy to deal with hostile neighbours and irredentist refugees on their borders.

ally, helping the killers to

Letters may be faxed to +44 171-873 5938 (please set fax to fine), amali letters editor@fi.com Published letters are also available on the PT web site. http://www.FT.com Translation may be available for letters written in the main international languages.

### Keynes' concepts misunderstood | Naive view

From Mr Robert Solomon. Sir, Michael Prowse's polemic against Keynes ("Spurning Keynes", November 4) ignores history, misrepresents the views of today's Keynesian economists, fails to do justice to Keynes' contributions to our understanding of how economies work, and is meanspirtted.

Prowse fails to note that the General Theory was published during the Great Depression when the problem was massive unemployment and the US was certainly not consuming too much. More important, it led to a revolution in our understanding of what makes economies move as they do. The concept of aggregate demand and what influences it is at the heart of modernday thinking about the busi-

ness cycle. Prowse misrepresents economists of the Keynesian persuasion. He fails to note that, with a few exceptions. they are in the vanguard of those pressing for reduction of the budget deficit in the

borrow and meddle". Finally, Prowse tells us that respected economists such as Paul Samuelson, whom he mentions and whose photograph is shown. embraced Keynes' teachings because it gave them the opportunity to save the world by entering government and managing the nation's affairs. As it hap-pens, Samuelson has never

Robert Solomon guest scholar, The Brookings Institution, 8502 W Howell Road, Bethesda, MD20817

'entered government".

Fram Mr W. Stanners. Sir, Michael Prowse hits an easy target in Keynes' "convoluted and often incoherent musings" which "told left-leaning academics what they wanted to hear", but seems unaware that this style was required to counter a self-serving and equally tendentious right-leaning establishment,

US, not telling politicians "to which "advocated policies that would promote the flexibility of all prices including wages", as Prowse approvingly puts it. This formulation treats

labour as a mere commodity,

which may be the only way of putting it into an equa-tion, but is obviously false. Water has never been known to complain if its abundance reduces its price to near zero, but people whose labour value drops below subsistence level will not quietly starve. Keynes noticed that labour units were also people (and also, that when they returned home they were transformed into consumers and savers), but he judged that "it is my fellow economists, not the general public, whom I must first convince". His so-called "general theory" was his convoluted but highly effective, way of reaching, outdebating, and out-jargoning this benighted audience.

W. Stanners 49b Fen End. Over, Cambridge, UK

### Ethos key to boardroom change

From Mr Stuart Bell MP. Sir, The Confederation of British Industry, in its corporate governance report prepared for Sir Ronnie Hampel's committee, may well have rejected suggestions that economic

stakeholders should be represented in company boardrooms ("Two-tier German boards rejected" November 1), but they did not do so in the context of the policies of New Labour. Put simply, the policy of New Labour is to seek to

change the cultural ethos of companies so that they can be more inclusive and forward-looking. We do not believe legal prescription is the most useful route to achieving progress to that

objective. On the two-tier board, New Labour has been fully aware of the CBI view for some time. We have raised the possibility of providing companies with the option, should they choose to exercise it, of adopting a two-tier board structure.

We shall study the CBI submission very carefully, as we shall study the eventual report of Sir Ronnie Hampel. They are both important contributions to the corporate governance debate, building on the reports of Cadbury and Greenbury which we have

### Restructuring challenge more complex

From Mr Chris Gentle. Sir. I agree with much of Stephen Roach's Personal View (October 22). He is quite right to argue that both Europe and Japan are very different economies and that they will not follow the

same path as the US. However, what needs more explanation is exactly how Europe will respond to the challenge of global competition that the US economy has met so effectively. An

understanding of this must be based on a more sophisticated analysis of Europe against the US. It is not simply a case of how quickly this restructuring will take

Take healthcare. Europe manages to provide higherquality healthcare delivery at less than half of the cost of the inefficient US system. I argue, in my recent book After Liberalisation, that there is a limit to the

amount of deregulation that Europe can take after it has undergone the present round of restructuring it is now experiencing. This is because the social and economic fabric of Europe

Chris Gentle. senior consultant, The Henley Centre, 9 Bridewell Place, London EC4V 6AY, UK

wrenching experience.

### of pension liability

From Mr Willem H. Buiter Sir, The Commons social security committee's report. Unfunded Pension Liabilities in the European Union, is politically naive and economically illiterate ("Pensions debt stirs Emu debate", November 1).

Many continental EU members have more gener ous unfunded state pension schemes than the UK. Demographic developments and disappointing productivity growth make it impossible to finance present and future benefits with existing contribution rates.

This conflict is not confined to social security, but extends to present and future taxpayers and beneficiaries of public spending and existing holders of public debt. It is a national polit-

ical issue.
The UK is relatively favourably positioned although the steady increase in the public debt-gross domestic product ratio indicates that the situation here too is worsening.

With or without Emu, there is no chance of the UK taxpayer picking up the tab for the continental pensioner. The Maastricht treaty explicitly forbids it.

The argument that a European Central Bank could be blackmailed into monetising the unfunded pension liabilities of our continental partners is rich, coming from a country with one of the least independent central banks in the EU and a mediocre inflation record. The euro may turn out to be softer than the D-Mark is; it will be harder than the pound.

If cash-strapped governments attempt to borrow their way out, this will raise interest rates throughout the EU. This is a consequence of financial market integration. not of Emu. The notion that the UK can insulate its real interest rates from the rest of Europe by retaining monetary autonomy is an illu-

### Winterthur Group

### Significant increase in profits in sight also for 1996

For the 1996 business year, we are again expecting a significant double-digit growth rate in profits. The 1996 interim account shows a profit of CHF 248 million. In 1995, the annual profit amounted to CHF 419.2 million. which represented an increase in profits of 15.1%.

For the 1996 annual account, we are also expecting considerable growth in the shareholders' equity. As against the end of last year, the shareholders' equity rose by approx. 10% to CHF 4.4 billion in the first half of 1996.

In a comparison of the half-year figures, Gross premi-

ums rose by approx, 17% to CHF 14.3 billion. In non-life insurance, this positive development is chiefly due to the acquisitions made in the previous year, in life assurance, it—and shareholders. is ascribable to organic growth mainly in Switzerland, but also in some other European markets. Parallel to this good performance, investments have grown by approx, 16% since the middle of 1995 and now stand at CHF 78.3 bilton. Net investment income in the first half of the year indicates a very good financial result for the end of 1996.

Our exceitent position as market leader in Switzerland Peter Spälti and our strong showing as the fourth largest insurer in European business form the basis for the Winterthur

Group's continued success. We are strongly promoting our operations in the markets of the Asia-Pacific area, which have great growth potential. In North America, we are operating via companies which are firmly established in their regions. We are also resolutely reinforcing our position as one of the leading global insurers of multinational industrial business.

3: The Winterthur Group's positive development is the result of our clear-cut strategy, which we consistently implement by concentrating on our core business, by further increasing our net worth and profitability, and by focusing our activities on creating added value for our customers

Chairman of the Board and Chief Executive Officer

## Out of the sweetshop

After privatisation in the 1980s, many UK utilities were so eager to spend their cash on foreign ventures that they were likened by investment analysts to children in sweetshops: they bought anything they could

see - and were then sick. The privatised utilities power generators, gas and water companies - have spent an estimated £4bn on international diversification, according to Mr Bill Dale, utilities analyst at SBC Warburg, the investment bank. And most of the ventures

have so far lost money. Now the utilities, which began to announce their interim results last week, want to prove they have grown up. They have started taking a more rigorous approach to operations over-seas. There is a far more focused approach now than there ever was before," says

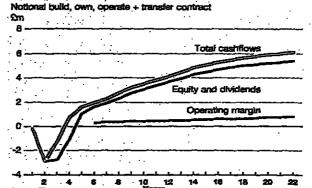

Mr Dale. In recent months some utilities have sold the worst lossmaking companies bought in the first flush of diversification. Others have pulled out of overseas competition altogether. But several have continued to expand abroad and have stepped up efforts to convince shareholders of the long-term potential of these

investments. Executives say exposure to foreign markets is particularly important because tight regulation of privatised utilities in the UK - including price controls - is making it difficult to increase profits at home, "There is no way we can effectively improve efficiency and profits in the UK forever," says Mr David Luffram, finance director at Thames Water.

The experience of Thames is a salutary lesson in international diversification, in the four years after privatisation in 1989 Thames spent more than £120m on overseas businesses, including Utag, a German process engineering company which failed to deliver expected revenues from eastern Germany following reunification. By the time Thames

UK utilities are taking a more grown-up approach to foreign investment, says Jane Martinson

in for the long term

sold Utag and another engi-The London-based utility had already announced a £95m write-down in March, mostly to reverse its over-seas policy. Mr Luffram mistakes. Instead of concentrating on its core water supply and sewerage busines overseas, "we went into design and construction and

fell flat on our faces" Thames has moved away from such "non-core" businesses, but it remains committed to overseas expansion. Presenting its interim results last week it emphasised the potential of six contracts it has won this year from Turkey to Australia, which work on the build, own and operate model and are managed in partnership with local companies. The group won its first such water and sewerage contract in Malaysia last September, at the start of the review which eventually led to the

write-down and a management reshuffle. Anglian Water, which services the east of England, disclosed yesterday that it had lost £6.5m in its international division in the first six taken over by Scottish the moment."

months of this year. It neering company last expects to continue losing month, they had made oper-money abroad until the end of the century. But Anglian is also emphasising its determination to win more overas contracts.

Such projects may lose money at first and can be risky. But they can also yield high returns over the life of a 20-year contract. Thames believes its foreign operations could be contributing £30m or about 8 per cent of pre-tax profits by

Other groups have also been at pains to emphasise the long-term benefits of their overseas strategies. In September, National Power. the generating company which has invested more than £800m in overseas ventures in the past five years, announced that it expected to earn £30m after tax from foreign operations in this financial year. In 1997-98 it believes this will increase to £95m, or about 11 per cent of total estimated earnings.

Other, smaller UK utilities such as Southern Water and Yorkshire Water have been less successful, pulling out of most overseas work and concentrating on the home market. Southern Water, area for these companies at

Power this summer, has emphasised its commitment to achieving cost savings in a four-year £1bn investment programme in the UK. York-shire also decided to concen-trate on winning back the trust of its domestic customers after being criticised during last year's drought.

That partly reflects political pressures. Both the regulators and Labour have voiced unease at the possibility that international ventures may be subsidised by regulated domestic operations. "I am in favour of British companies operat-ing abroad," says Mr Frank Dobson, Labour's environment spokesman. "But, in the case of utilities, that must never be at the expense of the customers to whom they are monopoly

It is not surprising that UK groups look enviously at the greater freedom enjoyed by some of their foreign competitors. On a recent visit to London, Mr Gérard Mestrailet, chairman of Compagnie de Suez, a large shareholder in Belgium's Electrabel and France's Lyonnaise des Eaux, spoke enthusiastically about the value of international expansion. His company, he said, had no problem financing projects involving a profit-ability "J curve" - short term losses, followed by

Embarrassed by their previous mistakes and shackled by political and regulatory uncertainty, the UK utilities have a long way to go before they can expect to hear such encouraging words from their own shareholders for

water analyst at UBS, believes the sector, in spite of its more careful approach to investing abroad, is unlikely to win much support from the City because possible returns are so long-term. "There is a stereotypical image of disastrous diversification, but in fact this is the most promising

escalating long-term gains. foreign ventures. Mr Lakis Athanasiou, a

## Throwing the rascals out

If half the allegations levelled Ms Bhutto has always said that against Ms Benazir Bhutto's she would not go quietly. administration in Pakistan are true, she richly deserved to be stripped of office. In three short years her government has stumbled from crisis to crisis, while acquiring a reputation as one of the most bent administrations this notoriously corrupt country has ever seen.

Yet President Farooq Leghari eserves only two cheers for the way he has moved against her. Through his repeated warnings about corruption and his efforts to ensure the independence of the judiciary, he has tried to enhance the constitutional role of his office as a guarantor of good government. By announcing new elections in February. he has made it clear that democracy is the only satisfactory way forward.

The snag is that three months is a long time to wait for elections when Pakistan faces dire economic difficulties. Much of its \$36bn in foreign debt is short term and requires continuous refinancing. Since reserves were perilously low even before Ms Bhutto's removal, the country risks a full-scale debt crunch if its bankers now withdraw.

Confidence might have been higher if Mr Leghari had acted earlier and replaced Ms Bhutto with an interim government of technocrats, akin to that led by Mr Moeen Qureshi, the former World Bank executive, which pulled the country out of a previous crisis in 1993. As long as its mandate was limited in time. that need not, as Ms Bhutto argued it would, have been an affront to democracy.

### Critical moment

Instead he dithered while Pakistan's finançes deteriorated, the government's moral authority drained away and respect for the law diminished. caretaker government, he has: left the country vulnerable to instability at a critical moment. This would be particularly worrying if the reason for his hesitation was a divided army. Without military support, the exercise could easily backfire.

Stability is particularly impor-tant as Indo-Pakistan relations - always a dangerous potential flashpoint - are at a particularly low ebb and regional tension has been heightened by the upheaval in neighbouring

Two tasks now appear urgent. The first is to ensure that the IMF programme remains intact. It incorporates some important structural changes such as the tax on agriculture which will challenge vested interests. Banks, which have crassly lent Pakistan too much expensive short-term money, must realise that they now have more to lose than gain by pulling out. If necessary the IMF must put pressure on them to continue refinancing their loans. It would help if Mr Leghari continues to allow a central role for the able and apolitical central bank governor, Mr Muhammed Yaqub.

### Political task

The second task is political. Mr Leghari's intervention has been courageous for a man appointed by Ms Bhutto herself. All sides should now co-operate to ensure that stronger political institutions can indeed produce a stronger democracy. Ms Bhutto must accept that her chance of vindication, if there is one, will come with fresh elections. The corruption allegations against her husband and others must be rigorously pursued, but transparently and without vindictiveness. New legislation to tighten public accountability should be enacted and strictly enforced.

It would be foolish to assume that Pakistan can be cleaned up quickly. All major parties are riddled with corruption, but if Mr Leghari's move is followed through Pakistan might finally By finally installing a weak have some prospect of electing a government capable of dealing with the urgent issues of social and industrial development. Its second half-century might then promise some achievements worthy of celebration. Its people deserve something better than

## Spending the people's taxes

ar will be a greater proportion of national income than during the first world war. But most of it now goes on welfare rather

This was not, perhaps, the statistic which Mr John Major, the prime minister, had in mind when he said in September that there was a moral case for reducing state spending. However, it casts a curious light on the dilemma of his ministers yesterday as they struggled to control its rise for next year's Defence spending, at about

£21bn this year, is one of the few programmes to offer a chance of cuts. At 3 per cent of GDP, it is now 27 per cent less in real terms than at its peak in 1984-85, but it may still be too high given the collapse of the iron curtain. However, leaving aside the arguments about maintaining a military capability, the fact is that this is no longer where the big billions are consumed. Defence represents 7 per cent of general government expenditure and, relative to the ize of the economy, it has fallen by a third compared with

its position in 1979. Some further economies may be scraped from this and from other departmental budgets. But after three years of very tight expenditure controls, more cuts have been hard to find without an explicit government decision that the state should do less. In the three big spending departments - health, education and welfare, which now account for 60 per cent of the total (50 per cent in 1979) - significant cuts are impossible in an election year and difficult thereafter.

Keeping pace

For health (15 per cent of total spending), costs will continue to rise in real terms if spending is to keep pace with new treat-ments and the needs of an ageing population. Health spending is now 70 per cent higher in real terms than when the Tories came to power. Despite some slight easing of pressure from demography, it is unlikely that the trend will change much ent government.

UK government spending next without a radical alteration of policy - as the demand yester day for extra cash showed. In education, numbers are

now moving up again. Some 200,000 additional schoolchildren in three years' time could add about \$500m to costs, unless class sizes are allowed to increase. When these children reach higher education, they will add further to cost pressures. So, although real education spending has risen by a mere 30 per cent since 1979, governments will be under strong essure to curb future growth. teenagers going to higher education has risen steenly from under 20 per cent to 30 per cent, so the presumption of free universal access, already eroded by student loans, is bound to come under further question.

Explosive growth

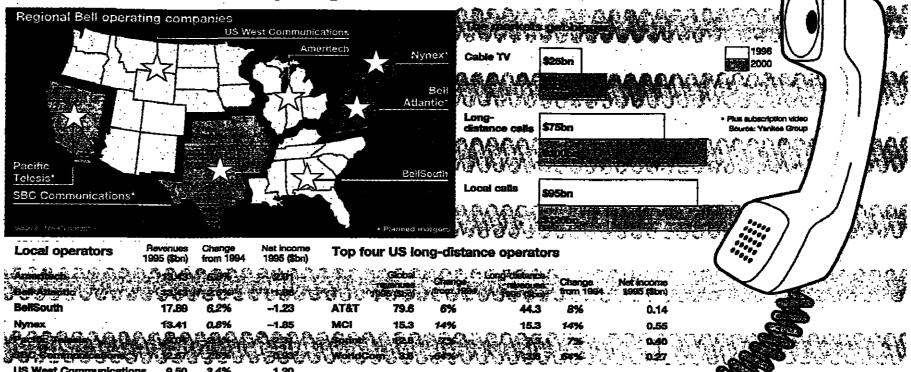

The most explosive real growth, however, has been in social security spending, up 84 per cent since 1979 and now consuming 13 per cent of national income (relatively more than all public expenditure in 1913). Falling unemployment is helping to curb growth, but unemployment benefits (excluding sickness and income support) account for less than 10 per cent of the total, compared with just under half for pensions. The government's ures to curb benefits and to ensure that benefits do not rise in real terms may therefore do little more than reduce the

growth of these transfers. More generally, present spending plans depend on a continued standstill in the publicsector pay bill and a damaging gap in public-sector investment. which the Private Finance Initistive can not fill.

As things stand, the govern ment will do well simply to hold public spending steady at about 40 per cent of GDP. Even if it succeeds in that aim, it will not be able to cut taxes significantly and still reduce the deficit as it must. Tighter targets would require a radical review of state activities.

But that will be for a different Budget, and, probably, a differ-

### US telecommunications: up for grabs

## Telephone turbulence

Richard Waters asks whether the revolution in the US telecoms industry will be as profitable as the dominant operators hope

Hartford, Connecticut. the cables that deliver television signals to many of the city's homes began to carry telephone calls as well.

Meanwhile, nearly half a million Americans have signed up with AT&T to get access to the Internet, just six months after the telecommunications giant started offering the service.

About the same number have switched their long-distance telephone service to GTE, an operator until now of local telephone networks. Has the glorious future that

has long been predicted for the US's communications industries finally arrived - a time when deregulation and technological innovation will change the way homes and businesses across the country communicate? And is this the revolution for which British Telecommunications, with its plan to buy MCI, has just enrolled?

If so, then it looks set to be a pretty turbulent period. Tele-Communications Inc

(TCI), the company behind the Hartford experiment, is stretched to the limit by the need to service debt. The company's share price has sagged by 35 per cent this year, as its cable systems around the country have come under competitive attack from satellite and other television services.

AT&T, which until last week was the US's ordy contender for global leadership in telecommunications, has suffered a setback in its own core business long-distance telephone calls. Rival carriers such as MCI, along with a rash of low-cost resellers who buy calling capacity in bulk and sell it on at discounted rates. have turned up the competitive

In the midst of a restructuring that was meant to leave it ready for the next wave of competition,

little-known printing company have contributed to a precipitate slide in its shares.

GTE has also seen its share price fall this year, as have the country's seven local telephone companies, also known as Baby Bells. Since February, when deregulation of their local monopolies was set in train by the US Telecommunications Act, the Bells' shares have lost between a fifth and a quarter of their value, while the Standard &

Poor's 500 has risen 15 per cent. This is the country that BT has chosen to enter. The hitherto separate cable-TV companies, Baby Bells and long-distance telephone carriers are about to be let loose on each others' territory, with unpredictable effects on market shares and profit margins. BT's sudden appearance on the scene has added extra spice.

Backed by BT's greater financial muscle, MCI says it will be a stronger competitor, not just for AT&T but for each of the regional Bells. It is the combination of BT's strong cashflow and US telecommunications industry this week, and prompted a search on Wall Street for another wave of giant telecommunications mergers.

Shares in so-called competitive

access providers - companies whose local networks already allow mainly higher-paying business customers to bypass their local Bell company - have jumped in recent days in anticipation of a new round of acquisitions by long-distance or even foreign carriers.

At first glance, it is far from clear that MCI needs either BT's capital or its experience of offering local telephone services to attack US local markets, especially since MCI is focusing mainly on serving business customers by building fibre-optic

seem very flat-footed indeed. networks in big cities. The sneak-That, and a decision to appoint a ing suspicion is that the arguments in favour of the BT-MCI deal are calculated to appeal mainly to US regulators, who have indicated that they will look favourably on any foreign investments that would bring greater competition to the US telecom-

> munications industry. But financial strength will be vital for any company that wants to seize large shares of the various telecommunications sectors that are being opened up. This is a matter of marketing as well as capital spending at a time when profit margins will be under pressure from increased competition. The capital investments being

made in the US communications industry at the moment are huge. The local telephone companies are spending \$20bn to \$25bn a year to upgrade their networks and develop new services, says Mr Dennis Saputo of Moody's, the US credit rating agency.

wrangle continwhether local telephony should proved in recent months. MCFs well-known eagerness for a be governed by federal or statefight that has shaken the rest of level regulation - a dispute that financial results since the spring slow the introduction of competition in some states there seems little doubt that widespread competition for local calling will begin early next year. The cable television companies. meanwhile, are set to lift their investment to between \$5bn and \$6bn a year on such products as new set-top boxes and cable modems, which would enable their customers to order films on

> to link to the Internet. That might be less of a drain on capital than investing in local telephone services. Speaking recently, Mr Brendan Clouston, chief executive of TCI Communications, predicted that it would cost the cable-TV company between \$200 and \$250 per home

demand or use their cable service

telephone signals. "Telephony is in many ways the most capital intensive [of services], and may be one of the longest pay-back

Then there is the mobile telephone business. Telephone companies have paid \$18bn this year for licences from the federal government to run so-called Personal Communications Services networks, a lower-cost alternative to cellular. They are estimated to be spending at least as much again to build the infrastructure to carry the calls - indeed, this is the purpose for which Sprint has earmarked the \$4bn it has raised by selling stakes to Deutsche Telecom and France Télécom.

However, as MCI's recent agreement to resell mobile calling services carried by a rival company demonstrates, companies do not necessarily need to own their own physical infrastructure to offer telecommunications services. Even leaving aside capital spending, developing and marketing new services can cost a huge amount of money and have a depressing effect on profits - as the mighty AT&T has

The company's disappointing money behind developing local, mobile and other services, rather than purely the long-distance business, says Mr Joseph Naccio, the head of AT&T's consumer and small business operations. "We took some risks there, and some of our product lines grew slower," he says. Even before full-scale competi-

tion in the local and personal communications services busisses is unleashed, the effects of this are clear: AT&T's marketing and selling expenses jumped by more than a fifth in the latest quarter. An all-out battle for market share will unleash a renewed marketing extravaganza. It will also, of course, hit profit

margins. By MCI's reckoning. competition in the long-distance

market has pushed profit margins on operating cashflow down to around 19 per cent. The comparable margin for local calling services is 47 per cent.

To slow the inevitable shaving of these margins, most big tele-communications companies are taking a similar approach. Called "bundling", it involves selling a broader array of services in packages - local, long-distance, cellular and paging, for instance, all bundled together on the same bill. Besides the revenueenhancing possibilities of this approach, it may help communi-cations companies to dispel the perception that they provide a commodity product while helping to strengthen their relationships with customers.

The average US household spends about \$75 a month on local and long-distance calling and cable television, says Mr Naccio at AT&T. "We have only a small piece of this disposable income." he adds.

There is another reason for Wall Street to feel less gloomy about the prospects for US tele communications companies: the fight for customers in the new world of US telecommunications is not a zero-sum game.

ried on the country's communications networks is rising by 30 per cent a year, says Mr Gordon Anderson, head of the Yankee Group, a telecoms consulting firm. Even with the price-per-bit of information falling, telephone and television revenues are likely to grow by 12 per cent a year until the end of the decade.

This, for BT's shareholders, could be the strongest reason for investing \$20bn in the US. Whatever happens in the international calling business, Concert, the planned BT-MCI group, would have a firm foothold in the world's biggest telecommunications market at a time when various lines of business - from Internet services to local telephone calls - are opening up.

### troops surround Bhutto's house

Mr Meiraj Khalid, the new interim prime minister, said the government's priority would be to hold "free, fair and impartial elections" on February 3.

Mr Farooq Leghari, the presvesterday after accusing her the two leaders.

Government troops meanwhile surrounded the prime minister's official residence where Ms Bhutto remained. She was unable to make telephone calls or receive visitors. Troops were also deployed around key government locations and airports.

In a proclamation ousting the prime minister and dissolving the lower house of parliament, the president said government could not be carried on in accordance with the constitution, and an appeal to the electorate was necessary. He added: "Public faith in the integrity and honesty of the government has disappeared."

Pakistan's main opposition leader, Mr Nawaz Sharif, welcomed Ms Bhutto's downfall as "deliverance of the people". He was confident his Pakistan next elections. The new gov ernment also received encouragement from the IMF, which said it would continue negotiations towards a new \$600m standby loan agreement.Mr Shahid Javed Burki, vice-president of the Latin American division at the World Bank, was expected to take over the finance ministry as adviser to

the prime minister. Pakistan's main stock mar ket, the Karachi Stock Exchange, was closed for a public holiday yesterday, but usinessmen expected shares to rise sharply today.

Confusion continued last night over the whereabouts of Mr Asif Ali Zardari, the prime minister's husband and former investments minister. Ms Bhutto's Pakistan People's Party said he had been arrested on charges of corruption, but there was no official confirmation.

Mr Leghari, a former ally of Ms Bhutto, accused her government of failing to stop the killings of hundreds of people at the hands of police in the southern city of Karachi.

Army exercises power but

### THE LEX COLUMN Destroying Valeo

Yesterday's "French solution" to the future of car parts maker Valeo produced one winner and a lot of losers. Mr Carlo De Benedetti who is selling his 27 per cent stake in Valeo at an 11-14 per cent premium to the market price, must be rubbing his hands. He might have got more from an industrial bidder. But none of the potential candidates, such as TRW of the US or Germany's Siemens, showed any sign of wanting to brave French political

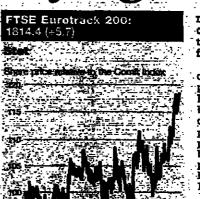

opposition By contrast, minority shareholders in Compagnie Générale d'Indus-trie et de Participations, the family controlled holding company, should be furious. CGIP is paying a hefty premium for a 20 per cent stake in a company that is heavily exposed to the dire French car market and with little scope for improvement, since it is already well-run. And hecause its stake does not give it control, CGIP may well have to mark it to market in its accounts bad news for a company already trading at a 50 per cent discount to net assets. Nor does the deal do much for Valeo shareholders. The chance of a takeover premium has disappeared and the promise of bigger dividends is halanced by the prospect of future share issues. But the biggest loser is France, whose laggardly approach to shareholder value has been confirmed again.

### Iri/Stet

Mr Romano Prodi, Italy's prime minister, has staked much of his credibility on privatising Stet, the state-controlled telecoms conglomerate, by next March. But this much-delayed share sale is likely to be postponed yet again.

With the former Communist party, a partner in Mr Prodi's coalition, opposing the sale, it is nearly impossible to pass the necessary legislation. Last week the party tabled 5,000 amendments. If the legislation is late, there is little hope of tapping international capital markets before next November because the calendar is crammed with planned privatisations for other

European telecoms groups. Postponing Stet's privatisation would not only put back the creation of an efficient Italian telecoms market but would also be a headache for Iri, the near-bankrupt state holding group which owns 63 per cent of Stet. Italy has promised the European Commission that Iri - a generous source of subsidies to state-owned Italian industry – will

cut its net debt from L16.000bn (\$10.5bn) to L4.500km by June next year. But without cash from Stet.

Italy seems destined to revege on its commitments once more. - Still, all is not lost. There is one way the government could simulta-neously meet the Commission's deadline, create an efficient telecoms market and add a few trillion lire to Treasury coffers: by buying

Stet from hi and breaking it up.
Paying Irl the L12,000bn market value of its Stef stake would cut the group's net debt to the Commission-mandated level. But because Stet's break-up value is about 25 per cent more than its market value, the government could turn a profit of L8.000bn on the deal. That should help avoid any concern in Brussels that the state was giving Iri yet another subsidy. Dismembering Stet, essentially a holding company with high central overheads, would also make industrial sense.

Unfortunately, unbundling Stet is easier said than done. Not only have Stet's management and its political allies resisted past attempts to dismantle its empire but Iri would fight the removal of Stet from its portfolio as that would diminish its own power base.

Breaking up Iri - whose assets include the national flag-carrier, the state-run broadcaster, Italy's motorways and most of its defence and aerospace industry - would make abundant sense. If the Treasury could get direct control of Iri's assets, it might be able to hasten their privatisation and stop the steady flow of subsidies.

Not surprisingly, this is the last thing Iri has in mind. Quite the reverse. It is lobbying the government to give it three new compa-

nies - a bank, a semiconductor company and an industrial promotion agency - to help tide it over its financial problems.

Such an injection of assets would. of course, make a mockery of European Union rules banning state aid But Brassels, which has little credibility on policing government subsidies (vide Crédit Lyonnais), would probably do no more than huff and puff. By contrast, dismembering both Iri and Stet would require political courage. It will be a test of Mr Prodi's government whether it has the nerve to grasp this nettle.

### Lloyds Chemists

A contested bid is a wondrous process. Though Lloyds Chemists is worth less now than it was at the start of the year, both Unichem and Gehe have renewed their previous offers of around 500p a share. And given the time and money invested by both sides, they will almost certainly force each other into another increase, which could be worth an additional 20p or so.

The higher the price, the more it favours Gehe, for two reasons. First, Unichem is already at full stretch. According to analysts, if it wins at this level Unichem will make a 12-13 per cent after-tax return on its investment in Lloyds in 1998, the first full year after acquisition. That assumes, perhaps rather generously, that it will deliver more than its forecast cost savings of £20m and has no trouble disposing of Lloyds' health food and drug store chains. If those savings do not come through, or it raises its bid much higher, the return will quickly slip below Unichem's 11 per cent cost of capital and destroy shareholder value. Gehe, by contrast, has a lower cost of capital, due to its larger size and use of cheaper debt to fund its offer. It can therefore pay more and still justify the deal to its own shareholders.

Second, as the two goad each other into overpaying for their target, the clean exit offered by Gehe's all-cash offer will become more and more attractive. If Lloyds investors accept Unichem's bid, which is largely in shares, they expose themselves to the risk that the deal goes wrong. There are also longer-term worries about the direction of the stock market and the prospects for pharmacies as supermarkets pile into their market.

Financial Times Review of Information Technology

### SPECIAL REPORT

This second section of the lovember 1996 Issue of the FT-IT Review examines India's increasing influence in the global software industry. India's software export

Industry, worth more than \$1bn a year, has become one of the most dynamic sectors of the indian economy, fuelled by the demands of offshore client for low-cost, high-quality products and services

There are now more than 700 software companies in India. In the past the year, 104 companies out of the Fortune 500 outsourced their software development to India - "this clearly shows that companies can derive competitive advantage through alliances with Indian software companies," writes Mr Dewang Mehta, executive director of the National Association of Software Services. Nasscom (pictured above).

This report was written by Paul Taylor, IT Corresponde

Production editor.

## India's Software Industry

## Exports are surging ahead

India's increasingly confident software industry has a turnover of \$1.2bn, reports Paul Taylor

n little more than a decade, India has estab-lished itself as the leading offshore software development centre for scores of western companies and a rich source for the skills required to build the information technology systems of the future.

Many Indian software companies have already forged strong partnerships with their overseas and domestic customers and proved themselves able to compete in the global \$400bn software market - not just in terms of price, but on the basis of quality, innovation and technical expertise.

"indian software companies no longer have to compete on price alone," says Mr Charles Aird, president of HCL Consulting. "We were selling a low cost product, but we don't do that any-

His comments reflect the growing confidence among India's software pioneers that they have overcome the credibility hurdle and can now move up the value-chain in terms of both software services and products and compete on equal terms with the best product designers, project managers and software developers in the

Today, Indian software companies sell their services to an expanding international customer list which now includes Japanese and South Korean clients as well as those from north America and Europe, on the basis of quality, speed, innovation

That this should have been achieved in a developing country still struggling with a wide range of infrastructure and other probachievement and testament to the determination of the architects of India's software

Highlighting this, the industry grew by 61 per cent in the year to March 31, posting total turnover of Rs41.9bn or \$1.2bn, according to India's National Association of Software and Service Companies (Nasscom). Ten years ago, the industry was worth a mere Rs300m or

Strong overseas demand. coupled with government support and encouragement for the sector and the liberalisation of the domestic economy since 1991, helped India's software exports grow by 64 per cent to Rs25.2bn last year, while the emerging domestic sector grew by 56 per cent to

Overall, between 1990 and

1995 the Indian industry, which comprises more than 700 companies, grew at a compound rate of 46 per cent, almost twice as fast as the US software sector, and now employs at least 140,000 people in India, including almost 100,000 software developers. The Indian software industry is also developing real depth. According to Nasscom more than 160 companies exported more than Rs10m last year and 41 exported more than Rs100m of software and services.

Nasscom's executive director

try.
"It is ideally suited to India as it demands high skilled manpower; it has no undesirable environmental side effects; it is growing rapidly, and, unlike 'capital intensive and low skilled industries', investment in this industry is not easily

driving force in the IT indus-

number of factors help explain India's software success and its ability to outshine rival offshore software development centres including China, the Philippines and eastern

As Mr Niraj Somaiya, an analyst with Bombay-based HG Asia, part of the ABN Amro Hoare Govett group, notes, "India scores well above other developing in which India, traditionally countries on account of having highly skilled manpower and a tremendous improvement in the hardware and As Mr Dewang Mehta, communications infrastruc-

ture which makes it bighly cost effective for quality softnotes, "the software industry is increasingly becoming the ware development."

The availability of a huge pool of relatively low-cost. technically qualified software professionals, high quality levels and a time zone advantage with both enabled india to exploit the rapidly expanding international market for outsourced software services including the expanding market for remote maintenance".

Indeed, India's emergence as an important development centre in the global software industry has coincided with some fundamental changes in the way information technology is used, including the trend away from mainframe-based computing to client-server computing based on desktop personal computers and inter-networking - an area a Unix-based computing environment, has particular strengths.

While these changes have generated strong demand for

skilled computer professionals from the IT industry itself, they have also spurred many end-users to re-write, convert and upgrade their existing software to take advantage of new technologies, such as graphical user interfaces and object-orien-

Since the mid-1980s however, there has been a growing shortage of software engineers in the West. This, coupled with the pronounced trend towards contractingout or "outsourcing" noncore operations among US and European corporations, been one of the main driving forces behind the growth of the Indian indus-

"Last year saw an unprecedented global outsourcing shift towards India," says Mr Dewang Mehta, Nasscom's executive director, "During the year 104 companies out of the Fortune 500 outsourced their software development to India. This clearly shows that companies can derive competitive-advanIndian software companies." Equally significantly there has been a marked shift away from on-site development services or "body-shopping" where work is undertaken at the customers' site,

to offshore services.

Historically many of the 700 Indian software companies have relied upon providing "body shopping" services for clients such as on-site programming. However, according to Nasscom figures, offshore services accounted for about 40 per cent of total exports last year with on-site services contributing the remaining 60 per cent. In contrast, the percentage share of offshore services in 1990 was a mere nine per cent and on-site services accounted for the vast

bulk of exports. Thus, an increasing proportion of the industry's revenues are being derived from fixed-price turnkey projects which are undertaken in India, some of which involve hundreds of hours of programming code, undertage through alliances with scoring the industry's tech-

nical and managerial strengths. This shift reflects growing confidence among the software industry's overseas customers, many of whom begin their relationship with Indian developers by insisting on on-site work, but once they feel comfortable about the quality and skill levels, are willing to ship their work offshore - a

for 1995-96 are estimate

at Rs25.2billion, while

the domestic software

India's silicon citie

Concentration of

much more cost effective option. "The industry has much more credibility these days," says Mr Mehta. The move towards offshore work has been underpinned by two key factors. First, Indian software companies have adopted quality standards enthusiastically. Forty-one Indian companies already have ISO 9000 certification and another 60 companies are in the process of

acquiring certification. "By the year end, we expect more than 80 companies to have achieved ISO 9000 certification," says Mr Mehta. Highlighting the high

quality standards that are Continued on next page

## No shortage of entrepreneurs

**HOW DO YOU** 

STAY AHEAD

IN BUSINESS?

achievable in India, Motorola's Bangalore software facility has obtained the US Software Engineering Institute's level 5 certification and Citicorp Information Technology Industries obtained SEI level 4 certification last year.

The leading Indian software companies are also investing heavily in training, and in leading-edge programming skills such as computer-aided software engineering, fourth genera-tion languages, object-orientated programming, graphical-user interfaces, Java programming and increasingly Internet and electronic commerce technologies.

Second, the telecommunications infrastructure in india is being improved quickly. In particular, Videsh Sanchar Nigam (VSNL), the international elecommunications carrier, has moved quickly to pro-vide the 64Kbps data links required by software developers to link up with their international clients. "Currently, there are more

than 400 leased lines providing high-speed data communications links for offshore software development," says Mr Mehta, "In 1991 there were only three.

Among the leading companies which have outsourced software development to ber of the top-tier domestic

AT&T, International Business Machines, Reebok, Caterpillar. American Airlines. British Aerospace, General Motors and Fulitsu.

In some cases, western companies have set up their own "captive" development operations in India, in others, they have formed joint ventures with Indian partners or relied on partnership deals with indigenous Indian software developers - some of which have pioneered the concept of "virtual laboratories" - development suites dedicated exclusively to a client.

Another important indicator that the Indian software industry is maturing is that more research and develop ment and software design is being done in India.

Among the multinational companies which have Indian operations, serving as software engineering and production centres for their worldwide operations, are Citicorp, ComputerVision, Verifone and Texas Instruments.

Recent additions have included Oracle, the database specialist, Novell, Motorola and Siemens all of which have established large and rapidly-growing software engineering subsidiaries in Bangalore, India's "Silicon plateau".

Similarly, a growing num-

India are General Electric. Indian software developers gineering are ideally placed are beginning to invest in to benefit from the billions R&D and the development of of dollars of work which their own software packages and services. A handful of Indian companies including Tata Consultancy Services, Infosys, Ramco and Mastek have already developed successful software packages mostly for the domestic market and others includ-

> India has the second largest Englishspeaking scientific manpower pool after the United States

ing BFL in Bangalore are taking the first steps towards developing their own shrink-wrapped prod-

Significantly this higher risk and more costly development work is being undertaken at a time when the Indian industry appears to be on the threshold of a "Year 2000" or "Millennium bomb" bonanza.

Indian software companies, with their proven expertise in software maintenance, migration and re-en-

industry experts predict will flow from the need to rework much older software to deal with the millennium date change. Already many Indian companies have signed partnership deals with western computer services groups and some have already undertaken Year

2000 pilot programmes. India certainly bas no shortage of software entrepreneurs and innovators - after all, one of the country's key competitive advantage has been the sheer size, technical competence and relatively low cost of its manpower base.

India has the second largest English-speaking scientific manpower pool after the US, and a sophisticated higher education system producing a steady stream of highly qualified graduates.

This pool of high-powered but low-cost manpower has helped underpin the rapid growth of the industry - and particularly exports. But most analysts agree that low costs are unlikely to provide a sustainable competitive advantage.

Nevertheless, despite salary increases averaging per-haps 25 per cent over the past 12 months, India is still

very cost-competitive. "We see the advantages of details, page 5 India's cheap labour being 

Case studies, page

sustainable for at least five more years," said Marlin Partners in an analysis of the Indian industry, published earlier this year.

In the longer term, analysts argue that India's competitive advantages will come from ensuring productivity and quality. However. the Indian industry also has other hurdles to negotiate if it is to reach its full poten-

In particular, infrastructure problems, particularly extended daily power cuts and water shortages in software centres such as Bangalore, threaten to stall or curtail the industry's growth.

Nevertheless, most of the indicators are positive. The country's already a force to be reckoned with in the world software market. although, as Mr Ashank Desai Nasscom's president notes, "we still have miles to go. The international opportunities as well as the potential in the domestic market

By the end of the decade, the association is predicting that the industry's revenues will reach \$5bn. By then. India may have even produced its own Bill Gates and Microsoft.

are huge."

□ Exporters' innovation: Indian Software Pavilion in London this month: see

The sales potential is vast

Prospects for India's lively market has the attention of international

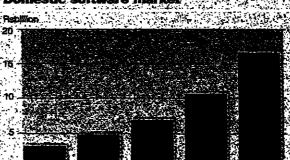

IT giants The domestic Indian software market has grown used to living in the shadow of the dynamic export sector, despite notching up a very respectable compound growth rate of more than 38 per cent between 1990 and

1995. signs that the tide could be turning as Indian industry and commerce begin to invest heavily in information technology to ensure that they can compete in the liberalised domestic market and overseas.

Two years ago, the growth rate in the domestic market exceeded export growth for the first time and last year domestic software sales grew by 57 per cent, only just behind the spectacular 64 per cent gain posted by

According to National Association of Software and Services Companies figures, domestic software sales - ex-cluding software developed in-house - increased Rs16.7bn in 1995/96 from Rs10.7hn the year before.

"One of the major reasons for increase in demand in domestic market has been the increasing maturity of end-user organisations as well as initiatives taken by Nasscom and Department of Electronics in curbing soft ware piracy," says Mr number of other reasons

including a sharp reduction in import duties on software down to a uniform 10 per

Coupled with rapidly growing personal sales, computer penetration - albeit from a low base-and a marked shift towards packaged software, these factors have produced a surge of interest in the domestic market and a boom in IT training for companies like NIIT and Aptech.

### Multinationals

The growth and enormous potential of the domestic IT market has already caught the attention of companies like Microsoft, the world's largest software company, which has built up a nationwide network of dealerships to sell its products and is undertaking a wide range of "market development" activ-

Other multinationals targeting the growing Indian domestic market include Novell, Oracle and SAP, the Ashank Desai, Nasscom's German manufacturing president. But there are also resource planning specialist which has formed a highly

behind the recent surge in successful partnership with cing a bonanza for big re- marketing game, he also Systems, part of the Siemens group. "Virtually all the large multinationals in India

are customers for SAP's R/3

package," says Mr P Venka-

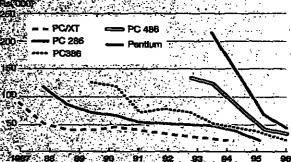

tram, general manager of Prominent local companies in the Indian market include Tata Consultancy Services, Winro. CMC. Onward Novell, Sonata, Tata Unisys, Rolta and Mastek.

While services and turnkey projects still account for a large proportion of the overall domestic IT market, packed software is claiming a growing share. Sales of packages totalled about Rs73m, or around 45 per cent of the overall market

Among the fastest growing market segments are the manufacturing, financial services and government fields. Sales of relational database management systems increased by 50 per cent, sales of financial accounting packages doubled and networking product sales grew

by 90 per cent. Overall, Nasscom reckons 122 new software packages were launched by overseas companies last year - produ-

### The falling cost of PCs in India

Wipro. However, domestic in large niche markets. packaged software vendors have also performed well. According to Nasscom, 104 new products from indigenous software suppliers were launched last year. The leading domestic packaged software developers include Infosys whose rapidly expanding product portfolio includes the Nancs 2000 banking package and D-Maps, a distributed mapping packages which has also been sold successfully

### Competition

abroad.

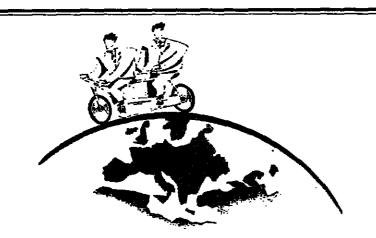

"Our biggest challenge today is how to recruit, train and retain the best and the brightest software professionals because there is tremendous competition for manpower," says Mr N.R. Narayana Murthy, Infosys' chairman and managing director.

While he believes Indian software companies are software vendors have unlikely to be able to combarely begun to scratch the pete against western companies such as Microsoft in the

Other successful indigenous software package developers include Bombay-based Mastek whose products include the Mamis enterprise resource planning package together with life insurance and securities industry offerings, and Madras-based Ramco whos ERP package has won crif. cal acclaim and competehead-to-head with SAP.

Companies like Infosy Mastek, Ramco and othe; have proved that domesti Indian software developer: can build innovative, leading edge business software packages and their success is likely to encourage others to follow.

Today there are about 390 active companies in the domestic software market compared with just 10 five years ago. While their recent growth has been impressive. the potential remains enor mous. ### Timeless Values in a Borderless World.

It is indeed a matter of great pride that some of the most revered names in the world chose BFL Software as their partners. We are talking of names like Astra AB. Berding GmbH. Compaq Computer Corporation, Complex Software Systeme, Comshare Ltd., FedEx, Hyundai Electronics, and NEC. They count on us to

deliver world class software solutions. And appreciate our quicker response times and innovative problem solving methods.

Located in Bangalore, the Silicon Valley of India, BFL Software has a comprehensive resource base. over 400 finest trained software professionals, state-of-the-art infrastructure and satellite communication links for instant access to your office. Our ISO 9001 certification is further assurance of our consistent, world class quality.

WIPRO Better people.

SYSTEMS Better solutions.

We sure understand global business. Our consistent growth rate of over 80% proves one thing : we have made a positive difference to our customers' businesses. We can do it for you too.

### An accolade-winner

India's youngest software start-ups having been founded in 1993, but it is also one of the fastest-growing and most dynamic and last month won an accolade from Compaq Computer, one of its main offshore clients.

The quoted company, part of the Calcutta-based Bangur Foundation, has two development centers in Banga-lore, India's Silicon City (a single campus called BFL Township is under construction 20 kilometers outside the city), and overseas offices in the US and Singapore. Last year the group, which now employs over 410 software professionals and 40 managers, reported turnover of \$7m, a figure expected to grow to \$13.5m in the current year.

BFL's employees are divided into six technology groups, the systems group which specialises in operating systems utilities, device drivers and test suite development; the networking group; the re-engineering group which provides downsizing services, migration services and Year 2000 solution: the database and client/

Nadar, charismatic chairman, has set his sights on turning the group he helped found in 1976 into India's first infor-mation technology multinational by the end of the

Already, HCL ranks as india's largest IT group with revenues of \$500m in the latest financial year, several publicly traded subsidiaries most of which are market. leaders in their fields - and a string of important international joint ventures and partnerships.

Nadar, now aged 50, epitomises India's new bread of IT entrepreneurs. He moved to Delhi from his native Tamil Nadu in 1968 to work as an electrical engineer for DCM, an Indian conglomerate, where he rose to become marketing manager of the data products division.

Hindustan Computers Ltd was set up by Nadar and five colleagues to manufacture office products such as copiers. Since then, bowever, the group has mushroomed into a broad-based IT conglomerate with global ambitions.

Among HCL's main businesses are the flagship HCL

Shiv Nadar, HCL's cheirman, epitomises India's new bread of IT entrepreneurs. HCL Hewlett-Packard employs over 7,500 people

Hewlett-Packard company and HCL Frontline, market leaders in India's fast growing computer hardware business, NITT, one of the country's leading IT training companies, and HCL Consulting which undertakes on-site and offshore software development projects for customers around the globe and ranks as a top-ten software exporter in its own

Aside from running more than 150 training centres joint venture formed in the ops and sells educational government began the eco-

elsewhere and develops software for overseas clients including Sun Microsystems. Sears, Robebuck & Co and

Overall, about 77 per cent of the group's revenues come from computers and software - its hardware offerings range from high powered servers down to its Busy Bee range of home personal computers, priced from iust Rs 20.000.

HCL Hewlett-Packard, a early 1990s after the Indian

organisation and the group, which employs more than 7,500 people - more than half in software and customer-services engineering – has also been broadening its product portfolio and geographic reach through a series of recently announced joint ventures with General Instrument in cable TV equipment; Deluxe, a leader in the US integrated payment systems market; James Martin for Year 2000 solutions; and Perot Systems in computer services and outsourcing, which will focus on opportunities in the Asia Pacific region.

"There are a myriad business opportunities in the IT area in the Asia Pacific region," says Mr Nadar. "We expect continued growth and modernisation in finance and banking, utilities, energy, telecommunica-

tions, transportation, healthcare and manufacturing." Other allies include Microsoft and Britain's Logica which HCL-Consulting has teamed up with to provide

migration services. Outside India, the group has an established presence in 15 countries. "We realised early on that we needed to globalise the business," says

Mr Nidar. Will Mr Nadar and HCL realise their objectives? Most analysts have no doubts that they will. As HCL's chairman notes: "There is a kind of aggressiveness that runs

Strategic alliance Eight weeks ago. Microsoft, the year to March 31 com-the world's largest software pared with Rs1.01bn the pre-whom now run other Indian software companies.

From the outset, TCS recognised that its future lay in software and IT consultancy services, but it needed to acquire technology skills if it was to deliver software products and services to the domestic market. "That is where our venture in exports started," says Mr Kobli.

One of the group's first domestic projects was in banking. "We worked with a bank and discovered they were in arrears by months and years, we cut the areas to about two or three weeks. we couldn't reduce the arrears any further because the entries were still coming by the post, there was no networking then."

Subsequently installed the system in 49 banks in India, "we learned about re-usability long before anyone else."

The first overseas work that TCS did was for Burroughs, taking a hospital management system and converting it from one platform to another. "It was worth \$35,000, but we didn't have a Burroughs machine, so we wrote the code for an ICL machine and then developed a filter from ICL to

Burroughs." Ever since then, TCS has prided itself on being one step abead of its rivals with new technologies - for example, it is investing heavily in Internet technolo-

Mr Kohli insists that the focus of the group will remain software. Currently exports account for just over 80 per cent of revenues and grew at 48 per cent last year to Rs4.2bn while domestic earnings grew by 88 per cent to Rs939m. Over half the export revenues come from onsite projects, and the US market accounts for about 50 percent of total exports.

TCS is also strong in the packaged software segment, both as a distributor for Oracle, Avalon, Lotus, Unigraphics, and SAS and with its own products including E.X. RTwo, Success Planned!, and ISBS, a banking package now installed at 500 sites.

The group has recently signed a licensing agreement with Britain's Business Objects group which plans to sell a new banking package developed by TCS in the international markets.

The Indian group has also renewed its partnership with IBM's Lotus unit for Notes

Software exports • A key earner of foreign exchange in India's economy

Continued from page 3

ware export industry brought in foreign exchange earnings of \$734m and, as Mr Dewang Mehta, executive director of Nasscom, notes, has emerged as one of the highest net foreign exchange earners in the Indian econ-

Indigenous Indian companies, led by industry veterans such as TCS, IIS Infotech and PCL Mindware, are also expanding their international presence, setting up offices in the US, Britain, continental Europe and now in Asia and the Far East for example Square D has set up a Japanese sales office and has a team of Japanes speakers in its Madras facilities dedicated to translating

project work.
While the main objective of these overseas offices is to win new business and build relationships with offshore clients, at least one Indian company, ION Information Technologies, has taken a different approach setting up a team of project managers and software engineers in the Thames valley, "to ensure project manage and control is retained in the UK to reflect customer

The Indian software export industry is also extremely diverse - in terms of size, skill-sets and geography. Last year, more than 160 companies exported over partially solving visa and European companies were

with just 14 companies in this category five years ago. Similarly, the number of Indian companies with high-speed 64Kbps satellite datacommunication links a key requirement for undertaking volume offshore work - has mushroomed from just

five companies, four years ago, to more than 250 today. As Mr Iain Allison of Bombay-based Marlin Partners noted in a recent report on the sector: "American corporates have been the main employers of this industry and have been highly influential in determining its shape and the nature of its

### Communications

"Improvements in the telecom infrastructure have meant that the United States and other developed markets are on India's doorstep and not on the other side of the globe. No other Indian industry has these factors favour-

ing it."
In terms of markets, the US continues to top the list. According to Nasscom, India exported software worth In other words, software exports to the US grew by almost 60 per cent.

exports to the US was possible due to successful lobbying efforts by Nasscom in related issues," claims Mr set up. Looking ahead, most Mehta. set up. Looking ahead, most analysts believe the pros-

But while US companies have been in the vanguard in terms of exploiting the relatively low software software development opportunities that India presents, European and Japanese companies are beginning to realise that outsourcing to India can help them maintain their competitive edge, accelerate time to market and reduce costs. Among the recent new

entrants, UK-based financial

services groups are showing particular interest in India. For example, Churchill Insurance, one of the UK's leading direct motor and home insurers, established a software development subsidiary in India earlier this year. The new unit will undertake software development work in an Oracle Unix environment, and provide consultancy services to Profit margins its parent and other group companies in the specialist fields of very large databases, performance tuning, hardware sizing and configu-

Nasscom has recently launched Phase II of Project Niesa (Nasscom's India-Eu-Rs14.5bn to the US last year. rope Software Alliance) to establish joint ventures and strategic alliances between companies in India and the "This quantum of software European Union Within 15 months of the launch of the initial phase, 11 joint ventures between Indian and

pects for India's software exporters remain good. With development costs and 100 per cent income tax exemption on software exports, the sector has also been very profitable so far.

Both operating margins and return on capital employed have averaged about 30 per cent across the sector, according to SSKI Securities, making the sector's leaders attractive investments.

Nevertheless, there is a growing acceptance that although India's cost advantages will reduce over time. For this reason, most Indian software exporters are looking to move further up the value chain.

The current export mix has been likened to a commodity business - standardised software packages, the most profitable segment of the software market, only account for 10 per cent of Indian software exports.

"With increased competition and higher costs, margins will fall over time, says of Mr Srinath of SSKI Securities. To offset this, he like most analysts believes Indian companies will need to develop products to sustain growth in the

ir::.....

For Indian software companies, rich in relatively low cost skilled manpower and with a proven track record

in software migration and re-engineering, the millennium problem could prove to be a bonanza. Already most of the leading offshore software development companies have set up dedicated Year 2000 units

and some have signed part-

nership deals with US and

European tool vendors, com-

puter services organisations

and consultancies Resources

"Some external service providers are moving ahead to further relationships with various offshore software vendors, particularly in India, to ensure they have the resources to put against insurance policies, are analysts in a report pub-

lished in July. "The recently announced joint venture Luxembourg. between HCL and James However, so Martin is one such exam-

"The millennium bug means tremendous opportunities for Indian software companies," says Mr or 30 cents per line of code. Dewang Mehta, executive director of the National Association of Software and Services Companies. "Many Indian companies have already taken this challenge and see it as a major opportunity and have specialised in providing solutions, not only through products, but also through customised software development capa-

bilities. Nasscom believes Indian software companies could harvest at least \$5bn of millennium work and has formed a special interest group on Year 2000 issues comprising more than 50 Indian software companies which either have tools or are providing solutions for the problem. As part of its efforts to bring Year 2000 to this issue," noted Gartner India, Nasscom is holding a series of seminars - the first

However, some of the leading Indian software companies are already warning that prices for Year 2000 contract work are rising from a base rate of around 25 cents

"We are under increasing sure to sign fixed price deals," says one senior Indian Year 2000 expert.

Cost-savings

Among Indian companies with dedicated Year 2000 programmes, the HCL Group's joint venture with James Martin, the US-based service provider, combines what Gartner describes as "the leading redevelopment and Year 2000 solutions methodology" (The Systems Redevelopment Methodology) with HCL's "software factories" aimed at reducing project time and cutting project costs. Nearly 3,200 of HCL's 9,000

consultants and developers could be involved in the joint venture and by using HCL's the methodology and

### Profile • National Association of Software and Service Companies

## A very clear objective

any trade associations fail in their LV 1 mission because they fragment and lose sight of their objectives, or cling to protectionist arguments rently, according to Mr in the face of rising competition. But for the Delhi-based National Association of Software and Service Companies sscom), the mission has remained clear - to act as a catalyst for the growth of

the software industry. Significantly, the Association's mission statement did not mention 'Indian' industry, and the association has embraced and campaigned for free trade ever since.

Nasscom's membership which has grown to over 400 and represents 96 per cent of the revenues of the industry. not only includes all the largest Indian software companies, but also most of the multinationals involved in

the Indian industry.
"We do not distinguish between companies owned by Indians, owned by a mul-tinational or owned by anybody else," says Mr Dewang Mehta, (see picture, page ane), who became Nasscom's executive director in 1991.

"We do not believe in protectionism, and we have a very global outlook - that has been one of the reasons for our success in establishing ties with various other associations in other countries," he says. "We do not believe in *only* exports, for example. We believe equally in imports: it is a two-way

sion to promote co-operation The association was formed in New Delhi in July 1988 although its origins date back to 1987, and the first software seminars held entrants to the market to in US cities by eight or nine pick their way through the Indian software company chief executives in association with the Department of Electronics.

"The department officers ish companies must look and the chief executives felt that it was important to have an organisation which would keep on doing these activities and more importantly, an association where they could share their expe-

The association had three main objectives. First, to lobby the Indian government

India's software industry has a global outlook

software-friendly", mainly in successfully overseas, particthe areas of tariffs, taxes and public procurement Second. to market the Indian software industry both in India and overseas and third, to campaign against piracy.

In the first two areas in particular, Nasscom has been remarkably successful. The industry has won tax concessions for exports and import duties on software have been reduced dramatically - from 270 per cent in 1988 to 10 per cent today. "We believe if we cannot compete with the global software industry in our own country, then we should

close down," says Mr Mehta. Nasscom was also instrumental in encouraging the establishment of India's 10 software technology parks where small and mediumsized companies can set up software in our own counoperations quickly. The try".

M Software piracy

## A call for tougher measures

Despite recent measures to curb sales in illegal software, piracy is endemic

t the bottom of Brigade Road, one of the favourite hangouts of Bangalore's young and rapidly growing population of software programmers, are four small shops, each not much larger than a US-style walk-in cupboard.

India's expanding offshore gade Computer is selling a software development industry - yet, even here, software piracy thrives. Each of the four shops sells CD- India in spite of valiant Roms packed full with attempts by the National pirated copies of the latest games and business applica-

soft, Novell, Symantec, Lotus and Adobe. Most of the pirated soft-

ware appears to have originated in China. Rs 1,500 buys 'Solid Gold, Vol 5', a disc with 50 software titles on it, including most of Microsoft's applications, software development and operating system programmes from The Computer Shop. Judging by the sleeves,

software development packages, including the latest Java development kits, are Bangalore is the centre of big sellers. Next door, Bribeta version of the Encyclopedia Britannica for Rs 800. Similar stores exist over Association of Software and Service Companies (Nas-

FCS and Avis • Example of an international partnership

Surveys by independent agencies suggest that between 60 per cent and 70 per cent of computer users in India use some pirated software. And a report by Nasscom estimated that the industry lost about \$75m through software piracy last year. However, while most industry executives agree that piracy rates are declining, most also contend that piracy is endemic, at least

Following a

heavy fines.

series of raids, facilitated by the Business Software Alliance and Nasscom, several high-profile court cases have resulted in prison sentences for the pirates.

At the same time, the gradual reduction of import duties on imported software - duties now stand at 10 per cent - has helped make legal software more affordable, although Indians still complain that the cost of imported software is still about 25 or 30 per cent more than abroad. While software piracy is

seen as mainly affecting imported packages at pre ent, it could also stifle the eventual growth of a domes tic packaged software industry. In order to address this issue, most industry executives believe more effective enforcement of the current laws may be necessary.

ComputerVision • Case study in software pioneering

## Expanding operations

The time difference means round-the-clock engineering is possible

ComputerVision, the US computer-aided design (Cad) software group, is expanding its operations in India by moving into a brand new state-of-the-art development facility in Pune which will open early next year.

The US group has pio-neered an architecture called electronic product definition (EPD) which redefines the

engines, cars, ships and air-craft will be designed in the

twenty-first century. EPD aims to replace expensive time-consuming prototyping methods with an integrated series of applications running on a variety of platforms and enterprisewide data management

**US links** 

The Pune facility, ComputerVision's only R&D centre outside of the US, will employ 300 software developers and will be fully integrated with centres in Bedconsumer goods, ford, Massachusetts and San

via a 128Kb backbone network to the Bedford and San Diego facilities, as well as the group's sales and service

operations around the world. The time difference between US and India means that round-the-clock engineering is possible, thereby improving productivity by a substantial margin.

The group's international customers include Fiat, Peugeot, BMW, Mercedes-Benz, Rolls-Royce, Lucas Aerospace, the Rover group, British Telecom, Lockheed Martin and customers in India like TVS Suzuki and Godrej GE Appliances.

Rolta India . Award winner in CAD software

### A winner abroad

The company now ranks among the world's top conversion vendors

Bombay-based Rolta India has carved out a niche in India as a cad/cam (computer aided design/computer aided manufacturing) specialist and has won a number of prestigious contracts including what it claims is the largest software services

export order. The company which works closely with both Intergraph and AT&T in the US and Rolta International, its US subsidiary, recently won a Rs1bn contract to provide AM/FM and CAD Conversion Service for the Saudi Arabian posts, telegraphs and telecommunications minis-

contract to install an additional 1.5m telephone lines,

effectively doubling the size of the existing Saudi telecommunications network. In addition 200,000 cellular telephone lines will also be provided under the main con-

Contract

Intergraph have been awarded a contract by AT&T to provide workstations running Microsoft Windows NT, 14 servers and facilities rulebased application model management environment (Framme) software along with consulting and CAD

Conversion Services. Intergraph, in turn, has awarded a contract to Rolta to provide the CAD conver-sion services which include creation of a digital data base from 30,000 paper and mylar documents into their Framme environment.

Instead of having to search through a filing cabinet for information, the new system

will enable engineers in the subscription and business offices of Saudi Telecom to access digital records and quickly determine the available resources. In the past, they had to rely on paper based records. The project will also include 40,000 building drawings.

This contract is to be completed in a period of 5 years and execution has already

With this order, following closely on the heels of a Rs80m order from Hong Kong Telecom, Rolta has been firmly established in the world of CAD Conversion Services and now ranks among the top conversion vendors the world," says Mr Kamal K. Singh, chairman

In total, Rolta International has won orders worth more than Rs1.2bn from various telephone and power utilities in US. Middle East, Far East and New Zealand.

CITIL: Producer of MicroBanker software packages

## Initiative pays off

Banks in 35 countries have installed the company's

software packages

In the early 1990s when almost the whole of the Indian software industry was concentrating on the software services market. one pioneering company took the bold initiative of venturing into the packaged

software vertical market CITIL, the Bombay-based software development company, owned by Citicorp. launched the first version of its MicroBanker software in 1991 targeting the international banking community and competing directly with established vendors such as Britain's ACT Kindle and

MKI. Over the past five years, MicroBanker has achieved an enviable reputation and

was rated as the top-selling integrated banking software up local support centres in suite in 1995 by one Londonbased trade magazine.

In total, 62 banks spread throughout 35 countries have installed the package a significant success for a "Made in India" software

New customers

Among the recent customers for the product are HDFC Bank in Bombay, which is

branches. Another customer is the Finance Bank of Zambia, which chose MicroBanker for its 35-branch network in Zambia, and its three overseas branches.

CITIL's Bangalore facility model of software engineerwhere enhancements are carried out and where worldwide customers can receive 24-hour, seven-days-a-week cent of the world's software support.

in addition. CITIL has set stx overseas countries. MicroBanker is currently in its release 9.2 version and

the product has built-in interfaces to CITIL's other software products. These include MoneyMaker, a dealing room package, and Finware for retail banking, plus a customer access system and an electronic banking solution for corporate cus-

The Indian group believes using the package in 18 of its its commitment to continuous improvement in the software engineering process has played a pivotal role in its success in delivering high quality packaged products and services.

The company has adopted The product is backed by the capability maturity ing and recently achieved Level 4 certification, placing it among the top two per companies.

## Information Technology

## Java poised to crack it open

Researchers say that new Java software 'is at the epicentre of a seismic shift in the \$650bn global computer industry Paul Taylor examines the claims

programming language - named after a type of gourmet coffee bean - which promises to unleash their creativity and liven-up network computing in meral, and the Internet and corporate intranets in particular.

But perhaps more surprisingly, Sun

According to a recent study completed by Forrester Research, more than 60 per cent of top US companies are experimenting with Java and over 40 per cent have already decided that it will become crucial to their Internet for most operating systems and are

computing strategy within a year. So what is all the excitement about?.. Java is a programming language developed by in 1990 by James Gosting a us-based workstation which where machines supply most of the computing power behind the World Wide Web.

Originally called 'Oak', it was such as set top boxes and video record—such as revolving corporate logos or ers and was therefore designed to be ticker tapes, into Web documents - see compact and easy to develop. "Java is buzzinged explanations, above, right. fully 'buzzword-compliant'," jokes Martyn Lambert, director of the network computing sales group at Sun in

"It is a simple object-orientated, distributed, interpreted, robust, secure, architecture neutral, portable, highperformance, multi-threaded and dynamic language." That may help explain Java's popularity among fashion conscious programmers who are rushing to learn the language and join Java development teams, but what really makes Java special and important to businesses is that it is truly "platform independent".

Currently, if a programmer wants to develop a new application (software programme), it has to be written for a specific combination of computer hardware and operating system, for exam-ple, an application developed for a Windows-based machine will not work on a Unix workstation. That means that if a corporate in-house software develop-ment team wants all computers to be able to run a particular application, a separate version has to be developed for each operating system.

Java is designed to break the fixed links between the application and the

ony-tailed programmers and operating system, so that developers computer 'nerds' are getting can create programmes which can run excited over a new computer on any computer. This means that programmers, can focus on developing applications area only, and then distribute the application to anyone no matter what computer or operating

system they are using.
Sun's Java achieves this alchemy in a simple but clever way. Programme Microsystem's Java software has also written in Java are not 'ready-to-run' caught the public's imagination and applications, but are in a special forcaught the public's imagination and applications, but are in a special for-fired up the enthusiasm of big business mat called byte code. To turn this code customers who are betting that it will into a working application, the comlower the cost of desktop computing puter must be running a separate pro-and improve their efficiency and comcess known as the Java virtual machine. This is another small software programme that reads the byte code and translates it into instructions the computer and operating system can

Java virtual machines are available already incorporated into most of the main web browser packages including the latest versions of Netscape Navigator and Microsoft's Internet Explorer. This means that every computer run-

Programmers initially demonstrated intended as a control programme lan- of Java by building so-called Java guage to be used in domestic products applets, small software applications

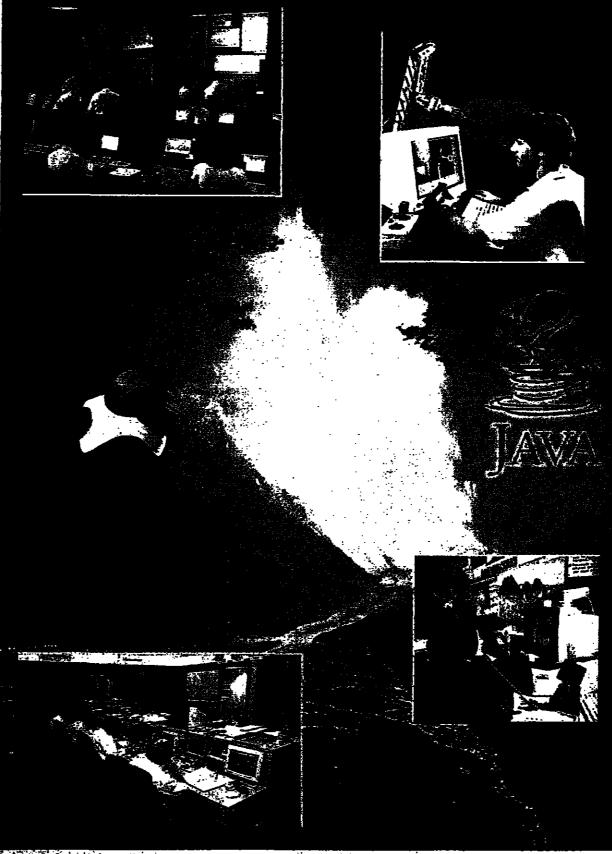

### Cost-savings in desktop computing

Write many people dismissed these early appliets as insignificant, the full implications of Java and Java programming are only just beginning to be recognised.

For example, Java applets can provide a type of 'just-in-time' computing. Instead of installing huge programs every time they need a new function, computer users can download an applet across a network, such as the Internet. Java's advocates also believe that it

will help cut the soaring costs of desktop computing. For example, Dun & Bradstreet has built a Java applet that will let employees issue a purchase request to a corporate server without having a full-blown purchasing program installed on their personal computers. Other software developers have created Java applets that let Web browsers view corporate databases and mainframe applications.

But the main savings are expected to come from reduced maintenance and

sonal computer only represents a frac-tion of the total cost of ownership which may be as high as \$8,000 a year. Instead of having to visit every PC on a network in order to upgrade software or fix a software bug, a Java-based application can simply be replaced or upgraded centrally and is immediately

accessible to all the desktop users.

This model has particular appeal for service organisations such as telecom-

Reflecting this, some of the early adopters of Java technology in the UK include British Telecommunications, Reuters and NatWest bank.

BT, for example, has developed a Java-driven data visualisation application which takes data on the volume of telephone calls across the UK and transforms it into a graphical format. Meanwhile, NatWest has developed an munications companies, information online banking package using Java

ness customers along with a browser to

access the service. Charlie Herbert, manager of Nat-West's new delivery channel unit, says Java has helped ease concerns about customer support and security. "I control the software and I can change it or fix bugs 'on the hoof'," he says.

Java's potential is not however limited to desktop machines. The next generation of personal digital assistants - hand-held computer and com**Java buzzwords** and. benefits

Java buzzwords:

Java: a platform-independent programming language. Java virtual machine: a small programme which translates Java byte code into computer instructions.

Java Applets: smail Java Java beans: a framework or architecture into which a programmer can 'plug in'

Hot Java: Sun Microsystem's Java-enabled web browser. Java chips: semiconductors designed to run Java programmes at lightning speed.

munications devices - may well be Java-powered and several telecom equipment companies, including Canada's Northern Telecom, have announced plans for Java-enabled tele-phones which will also enable users to access the Internet and corporate intranets from a telephone handset.

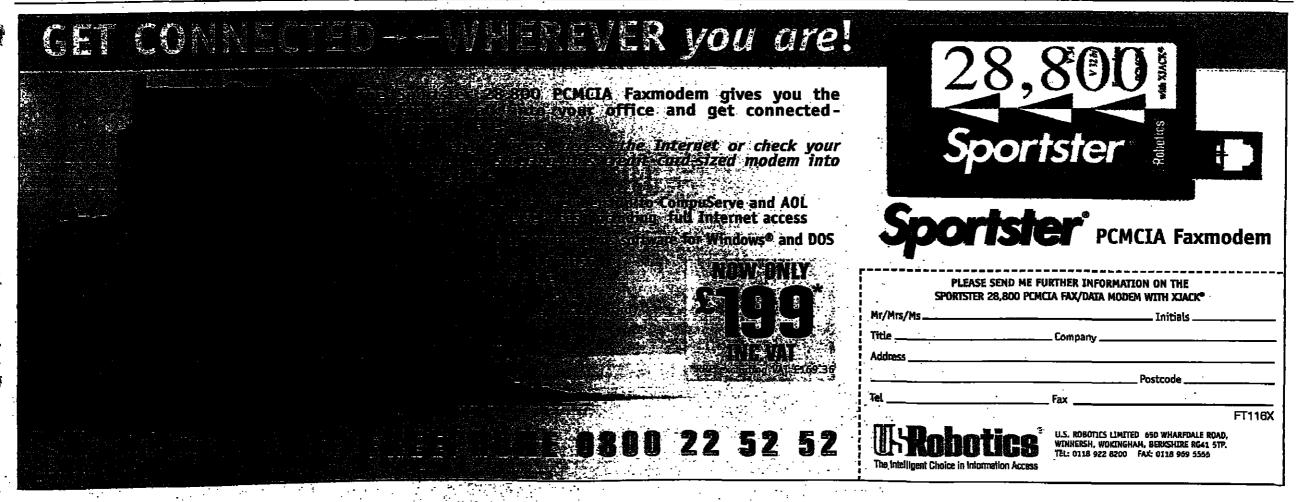

Almost all the leading participants in the emerging Internet software market have agreed to support the Java language – even though it only became fully available in February this year. Among them, International Business Machines in particular is moving rapidly to incorporate Java in its range of computer platforms and has estab-lished its Java Technology Centre at its Hursley laboratory in the UK.

"IBM is putting Java on all of its computer platforms including OS/2, AIX, AS/400 and mainframe MVS," says Simon Phipps who is in charge of IBM's Java development work. "Java makes it possible once again for a business to leverage its size by deploying enterorise-wide solutions."

But not everyone is so enthusiastic. Although Microsoft has also licensed Java, Charles Fitzgerald, who is in charge of Microsoft's ActiveX technology, has noted, "Java is not a cure for cancer, it doesn't repeal the laws of gravity - and there's a lot of things you can't do with it".

Earlier this year, the Gartner Group also gave some reasons for caution. Gartner argued that Java was a young and immature language, that there

have a hierarchical storage management product."

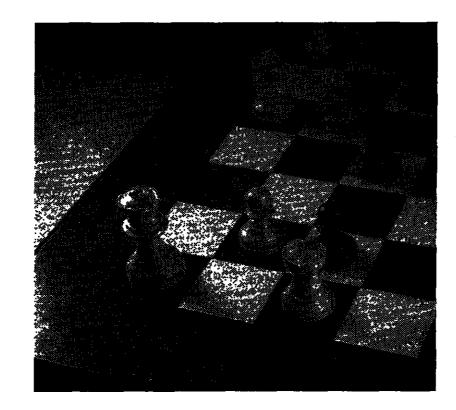

While Wang continues to invest in Unix, its largest investment is in Microsoft Windows NT. "We are riding that wave hard," says Tucci. "That is not to say we are abandoning Unix. We still have a very substantial investment in Unix but we have really invested to be the leaders in NT in this

"I think the office of the future will be Microsoft based," he says. in the corporate world he says Microsoft is a 'one purchase deal'. "We are back to a homogeneous environment from a software point of view, sort of what you had in the old days with Wang, except with Wang you had to buy VS (Wang's proprietary software) and you had to buy the Wang workstation, whereas today you have a wide choice of servers, PC manufacturers and even microprocessor

But Tucci also emphasises that no company in the IT industry can afford to become complacent. As a company re-born, he views Wang's key advantages as its speed and nimbleness. "We don't have a memory. We are a new business. We don't have a big legacy," he

"The industry is changing very quickly and it is easy to become obsolete unless you constantly evaluate and adjust your strategy." He tells Wang's employees: "If you are not highly adaptive and don't like change, you have picked the wrong company and you're in the wrong industry. But if you are looking for a vast opportunity and can commit yourself to hard work and innovation, you can reap the rewards this company and industry has to offer. So if this excites you, put on your seatbelts and let's go.'

## Several Moves Ahead

Ricoh thinks and plans ahead. Always one move ahead of the rest, Ricoh is the Grandmaster in office automation and the way to avoid checkmate. Ricoh offers strategic solutions: digital colour copiers that provide you with extensive copying and printing possibilities, multifunctional digital combination units that print, copy and fax and network equipment that increases the digital connectivity. In short, Ricoh can help give you the edge and ensure that you stay several moves ahead. Ricoh - your masterstroke.

## Lise internetworking revolution ... By Paul Taylor Scramble for shares in a \$470bn world market

As businessess move towards the information age, office system suppliers are in a race to help users exploit the vast pools of data becoming available on the Internet and through other online electronic services

as a business tool, and the rapid adoption of open Internet technologies as the foundation for internal networks, or intranets, has transformed the outlook for technology in the office and further blurred the distinctions between telephony and data

processing.

The immediate impact of this latest IT revolution is reflected in the scramble for new business among traditional suppliers to the \$470bn worldwide market for IT products and services. Well-established companies such as IBM, Microsoft and Oracle are adapting to the challenges and opportunities posed by the phenomenal growth of the internet and the prospects for electronic

Meanwhile, newer companies such as Netscape Communications, the California Internet start-up, and Net-com, the Internet service provider, have been catapulted to prominence while the Internet "plumbers" - such as Cisco, the fast-growing internetworking equipment supplier, and Sun Microsystems, whose web servers help power the Internet - have become hot

shares. Together, these companies are putting together the digital infrastructure for the next decade - an infrastructure that they believe will provide their corporate customers with the electronic tools they need to compete in an era in which the old distinctions between voice and data and between computers and telephones no longer apply.

Naturally, most IT suppliers have their own angle on the internetworking revolution. For example, IBM - the grandfather of office automa-

ver the past 18 tion – sees the growth of the this will remove the remain- the end-users, and local area months, the emer- internet and internetworking as an opportunity to exploit its expertise in systems integration. IBM has also jumped aboard the "network computer" bandwagon, which promises low-cost digital devices that will rely on networks and servers for

most of their power. Similarly, Microsoft, which dominates the market for desktop operating systems and integrated "office" soft-ware suites, has responded forcefully to the threat posed by Netscape and other Inter-net start-ups. A year ago, Mr Bill Gates, Microsoft's chairman, set out a new strategy for Microsoft aimed at placing the Internet at the core of all the company's office products and technologies. One result of this change

is that Internet Explorer, Microsoft's Internet browser software, will provide the user-interface to the next generation of Microsoft desktop operating systems. From the end users' point of view

ing distinctions between networks made the sharing locally stored data, and of data and peripherals information stored elsewhere on an intranet or the

Indeed, the whole basis for using IT systems in the office has changed dramatically in recent years. In the days of the corporate mainframe or departmental mini computer, corporate customers mainly thought of IT systems as a means to cut costs and automate existing functions - hence the everelusive dream of the paperless office.

oday, however, virtually no-one talks about "office automation". Instead, companies are investing in high performance multimedia network systems to improve their competitiveness, reduce time to market and respond faster and more effectively to customer requirements.

Desktop PCs put more direct power in the hands of

easier. But now all these systems are being interconnected using standard Internet protocols to provide seamless internal access to the full resources of an enterprise.

Firewalls and other security devices stand guard over these valuable internal

In the office environment, most medium and large-scale companies already rely on a wide range of digital devices and technologies to run their core business operations. Increasingly, these devices ranging from photocopiers to coffee vending machines are being hooked together and given their own "intelligence" so that they can function more efficiently.

Not only do these integrated systems ensure the smooth operation of basic office processes, but they also increasingly provide key interfaces with both suppliers and customers. Customer helplines are equipped with sophisticated voice systems: computer telephone integration technology reach of the telephone; Web sites give even small local companies the chance to compete with multinationals, electronic mail provides

resources while providing gateways to the external dig-ital world for those inside, and selective access for partners, suppliers and custom-ers. Although many companies have sought to focus on their "core businesses" and outsource peripheral operations; they are also seeking to use technologies such as e-mail, groupware products and electronic data interchange to build closer relationships with their business partners.

The growing complexity of office systems has placed network management tools at a premium. The worldwide market for network maintenance and help-desk services is worth around \$19bn and growing by about 15 per cent a year. Meanwhile, as the shift towards the fully integrated

huge volumes of data are

being generated, data that needs to be stored, sifted and manipulated if they are to give useful information. So today some of the fastest-growing IT areas are workflow, document and image management systems, data warehousing, enterprise information systems and brings together the power of data visualisation - all data processing and the methods to extract the maximum value from massive quantities of raw material see software report, pages 14-17. The market for open systems production worka low-cost alternative to flow and imaging software

Electronic "whiteboards' are becoming a key feature of videoconferencing. At the touch of a button, the Groupview document conference for, shows, from PictureTel, enables business users to send high resolution images of paper documents, transpen tis to distant meeting sites. See also report by Nusia Moran on whiteboards, page 6: the latest trend in teams more traditional forms of alone is worth about \$400m and growing by about 35 per

cent a year.

An increasing number of companies, including those in the financial services industry, is beginning to use sophisticated data mining techniques to target individual consumers, while others are using Internet technologies to personalise their services. The new management digital office gathers pace, mantra is: use IT "to sell to a market of one".

> eanwhile, the explosion of information available on the Internet and through other online electronic information services has generated new interest in sophisticated search techniques and "information robots", which can seek out and highlight useful information. Such techniques are already being used to reduce purchasing costs, track competitors and identify market opportuni-

Indeed, in the new infor-

mation age one of the key attract attention. In particu-differentiators between suc- lar, the lack of flexibility cessful and unsuccessful organisations may well be their ability to exploit effectively the huge pools of information likely to be at

their command.
As the demand grows for advanced forms of data communications within the office such as "whiteboarding" (see report, page six) and multimedia e-mail, the sheer volume and variety of data requiring delivery to the desktop is pushing existing networking technologies to the limit and fuelling the search for an enterprisewide, high-speed broadband technology capable of carrying all an organisation's electronic traffic. The main candidates appear to be Fast Ethernet and Asynchronous Transfer Mode (ATM) which can support video and digital sound as well as data and

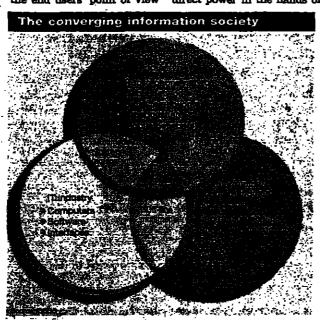

structure have also begun to dawning information age.

offered and the unnece costs imposed by hard-wired telecom links. Cordless telephony, wireless networking and high-speed infra-red links between devices such as printers and portable pcs are all expected to play a bigger role in the office of

the future. Outside the office, a growing number of busines already using digital cellular telephony, portable computers and mobile data networks to exchange information between the central office database and mobile employees, such as salesmen

Indeed, for some companies, the requirement for a full scale physical office may even disappear. In the "virtual corporation", staff will work mostly from home or while "on the road" and yet still have full access to the Other "inefficiencies" in panoply of digital corporate the office equipment infra- and Internet resources of the

■ Outsourcing IT services • By Nuala Moran

### ithin the next few years, 80 per cent of the 400 top organisations in the UK will form a strategic partnership for the supply and management of IT services. In effect, they will be acknowledging that they can no longer cope alone with the opposing pressures of fostering a flexible and responsive IT capability at the same time as controlling the cost.

This signals a change in approach to the outsourcing of IT, which is currently mainly done for tactical reasons, to reduce costs or to deal with particular projects.

"There are strong indications that a radical change will occur in the structure of the majority of IT divisions in the top 400 UK organisations within the next few years," according to a report by the international research company, Input.

These organisations each spend more than £12m a year on information technology. "They will on average outsource 40 per cent of this," says Peter Dooley, marketing manager of the IT services company. FI Group, which

commissioned the survey. "They are putting out such an enormous part of the IT function that attitudes to outsourcing will change. At this level it will affect the structure of the business, and they will be looking for strategic and long term partnerships.

Through these partnerships, companies will aim for an IT capability which can respond to the needs of the business, while keeping costs manageable. This will allow a company to move in and out of new product areas without either needing a huge investment

## Take your partners

In the recession the prevailing argument for outsourcing IT services was cost reduction. Now sentiment is changing and outsourcing relationships are increasingly strategic, rather than tactical

in IT, or paying for IT that is surplus to requirements. Companies now expect the majority of revenue to come from new products. Many of these have information technology embedded in them, or are enabled by IT. Product lifetime is becoming

shorter, and companies cannot allow the process of gearing up IT to cause a delay in getting a product to You can no longer afford to have an IT pipeline of a particular size, and then work through projects according to their priority rating," says Mr Dooley.

could lose half of its lifetime profitability." Furthermore, outsourcing IT functions allows

Now if you are six months

late with a product, you

companies to grow faster constraint of capital investment in computer

For example, a credit card company can recruit 20,000 new customers without having to expand its rocessing capability. Takeovers and mergers are also pushing companies into closer relationships with outsourcing suppliers. The cost-savings achieved when two companies are consolidated can be greater if a supplier or suppliers provide IT services for the whole rather than integrating two sets of

them to meet the needs of the enlarged organisation. An example is the \$5bn merger of the European downstream assets of British Petroleum and Mobil of the US. The merged organisation announced in October that it will outsource its accounting and financial transactions. along with more than 700 staff to Andersen Consulting and Price Waterhouse.

systems, or expanding one of

The company would not say how much it might save by outsourcing. But instead of running separate accounting systems in each of the 43 countries covered by the joint venture agreement, it will be paying the outsourcing partners to run one system each. Apart from reshaping IT to make it responsive to

business requirements, IT

John Willmott: The year 2000 problem will be costly

directors are now facing the huge overhead of dealing with the year 2000 problem. Most older computer programs, particularly those that run on mainframes, use only two digits to designate the year - for example 86 for 1986. Computer systems that have not been changed by midnight on December 31. 1999 will respond to the start of a year ending with the digits 00 by assuming that there is an error, and stop working, or interpret the year as 1900. This will invalidate all kinds of data-related calculations, sort routines and indexing

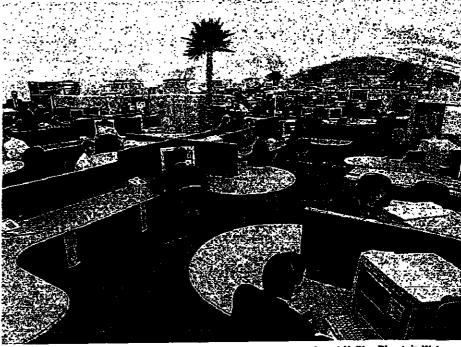

procedures. Dealing with this problem threatens to be costly and distracting. Even companies which consider their systems to be date compliant Also, compliant systems could be undermined by data coming from suppliers or

Having a close outsourcing relationship will make it easier to smooth out workloads associated with the year 2000 projects, and ensure this work is not carried out at the expense projects which drive the business forward, says Mr John Willmott, manager of Input's outsourcing programme.

Another imminent problem for banks and other financial institutions is the introduction of a single European currency. Even if the UK does not join, systems will need changing to accommodate the single currency. Mr Dooley comments: "With European Monetary Union and the year 2000 problem, 1998 looks like being a horrendous year with much skilled input required fust to stand still. But organisations will not need that level of people all the time."

Companies need their IT capability to be scaleable. allowing it to be turned up for a new product launch, or turned down to avoid duplication in a takeover or merger. "The problem for IT directors is that change is like London buses: nothing happens for a while, then it all happens at once," says Mr Dooley.

"This is why they are now looking for a different type of relationship with external suppliers. Change is lumpy. Companies are looking for partnerships which will help to smooth it out.'

tions in the new telephone banking operation at Hallfax Direct, in Water Lane, Leeds. Torch Telecom is providing 330 telephone lines through its high-tech network for Halli Direct, which is introducing its services on a phased basis. Business telephone services are being

■ Computing on the move ■ By Pail Taylor

## Portable PCs make steady inroads into desktop market

With a few clicks of a mouse, notebook PC users can gain high speed remote access to e-mail, the Internet, or a corporate intranet

he 'notebook PC' once viewed as little more than an expensive executive play-thing -has firmly established itself as a mainstream business tool, helping individuals to stay in touch while on the move and enabling organisations to maintain or extend their competitive edge.

At the same time, a growing number of organisations and 'virtual companies' in particular, view the high performance portable PC as a more flexible alternative to a traditional desktop - a machine which can be hooked into the corporate network via a docking station or network card while in the office, then taken home - or on the road, when

traveling.
Used in conjunction with fixed or wireless communications links and credit-card sized data cards or high speed fax modems while traveling, the portable PC is enabling companies and other organisations boost customer service, improve productivity and provide additional workforce flexibil-

Today, high speed remote access to e-mail, the Internet, or an internal corporate intranet can be just a few mouse-clicks away, even while on the move. Sophisticated integrated software packages, such as Procomm Plus and WinFax Pro. provide easy data communications while on the road using high speed data a fax modems which now include V34bis devices capable of transmitting data at

33,600bps (bits per second). For other hustness users. including home workers, remote access programmes such as kaplink and pcAnywhere, enable the portable PC user to log-in and take control of a desktop as though they were sitting in front of the office machine. Other packages, including groupware such as Lotus Notes and an increasing number of Internet-enabled applications, are also designed to work across local or wide-area communications links, enabling co-operative working.

In Europe in particular, the arrival of digital GSM (Global System for Mobiles) cellular digital networks has made keeping in touch with the office while on the move, much easier over the past five years. Portable PCs equipped with a cellular data card can be plugged into a digital GSM handset to send or receive data from almost anywhere in Europe - and a growing number of other places where there is a GSM network.

"Companies are acquiring portables in record numbers, indicating pent-up demand for the flexibility afforded by being mobile," noted a recent study of the European market for portable PCs pre-pared by International Data Corporation for Dell Computer, one of the notebook market leaders, with its range of Latitude machines. Sales of portable PCs.

which are also manufactured by companies such as Toshiba, Compaq, International Business Machines and Apple Computer, have been

growing twice as fast as desktops in some markets and are expected to continue outperform the general PC market.

The value of sales of mobile computers will more than double from \$30bn last year to nearly \$80bn by the end of the decade, an 18 per cent compound annual growth rate, according to a recent study, Pen, Palmtop and Notebook Computers, prepared by Frost & Sullivan, the market research

This demand is driven, at least in part, by the emerging trend for companies replace desktops with portables which are increasingly sold with docking stations or port replicators enabling them to easily integrate with corporate networks.

For example, Dell says that 70 per cent of its new Latitude machines sold in the UK are sold with port replicators which, aside from the usual communications. external video, keyboard and mouse ports, also include built-in support for Scst (small computer serial interface) devices and network adapters.

"Continuous price and performance improvements make the decision to substitute portables for desktops easter," says the Frost & Sullivan report "Businesses in

### The gap in performance between desktop machines and new portables has narrowed considerably

Japan commonly use portables now as their primary computers."

Similarly, IDC suggests that the portable PC is the primary system half the time at large and medium-sized companies in the US, but portable PC users in Europe appear to be lagging their international counterparts.

The growing popularity of portables also reflects tech-nological and manufacturing advances in areas such as semiconductor packaging, screen design and battery technology, as well as the relentless drop in component prices, particularly for Ram (random access memory) and hard disk drives. Until relatively recently, portables suffered a number

of disadvantages over their desktop counterparts. However, over the past year both the performance gap between desktop machines and their portables counterparts and the price premium paid for portables have narrowed considerably. Two years ago a portable machine cost on average 2.8 times the price of a comparable desktop, now the premium is down to 40 per cent.

Intel, the world's leading microprocessor manufacturer, has targeted the mobile computer for particular attention, developing a series of light-weight chips with low-power consumption into the desktop market.

specifically for portables. As a result, many of today's portable PCs boast fast Intel Pentium microprocessors which nevertheless consume much less power than their

Meanwhile, most notebook machines now come with a minimum of 8Mb of Ram, 500Mb or larger hard disks, 12-inch and sometimes ever 13-inch colour screens (virtually the same size as standard desktops) and an integrated CD-Rom drive - all in a package that weighs just over 6 lbs. Almost all manufacturers

have abandoned the market for mono screens. Higher quality 'active matrix' TFT (Thin Film Transistor) screens are gaining market share as greater manufacturing capacity, higher yields and increased competition help erode the price premium over 'passive' STN (Super Twisted Nematic)

For those users who do use their machines away from power sockets for extended periods of time, longer-life Lithium Ion batteries now provide considerably more power than earlier Nickel Hydride technology. while weighing much less. Similarly, the universal acceptance of the PC-Card cards) standard for adding peripheral devices such as modems, has also made mobile computing much easier - and less cumber-

Most portable machines now have two PC-card slots capable of taking the credit card-sized devices. As the demand increases for 'connectivity on the move', the market for PC-card modems network adapters and wireless data cards is expanding

rapidly. For those with limited computing needs and deep pockets, the latest genera tion of wireless digital per-sonal assistants - devices which combine the features of a digital telephone and a high powered electronic organiser - are attractive.

The marriage of handheld

PCs and wireless telephony in new devices from Nokia, Hewlett Packard and Motorola, as well as add-on enhancements to existing hand-held machines such as the Psion 3a and HP 100LX has helped re-ignite interest in the pocket-sized computing market, following disappointment with first genera tion PDAs such as early Apple Newton's which lacked wireless communications facilities.

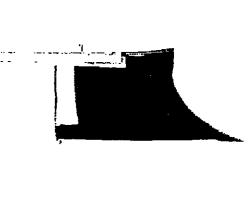

For example the GSM based Nokia 9,000 enables the user to send and receive e-mail and cruise the World Wide Web, as well as make standard phone calls - all from a single (large) pocket-sized device. But it comes with a hefty £999 price tag.

"PDAs, growing rapidly from a small base, will continue to be a success in niche markets, but they will need improvement before they become the mighty industry predicted at their introduction," says Frost &

For the moment, notebook and smaller sub-notebook machines are expected to account for the vast majority of world mobile computing market revenues - and continue to make steady inroads

## Systems security and support . By Paul Taylor Contingency plans are vital

Effective data management systems, back-up procedures and disaster recovery plans are not a luxury; they are an essential part of doing business in the information age

raiders" have helped turn puting Centre. chip theft into a multi-billion-dollar worldwide indusury. Meanwhile, equipment failures, accidents and the unexpected can pose a threat to the very survival of busi-

Corporate computer grow. systems, networks and database information in particubusiness tools, but dependence on computing power carries inevitable risks. Terrorist incidents such as

the bomb attacks in London. Docklands in February and in Manchester in June serve as tragic reminders of the need to develop adequate contingency plans.
In the wake of the resump-

tion of IRA bombing activity, nearly one-in-four city firms surveyed by Guardian Computer Services in conjunction with Computer Weekly magazine bad adjusted their disaster recovery plans. The survey, published in August, also revealed that an overwhelming 77 per cent predicted that their investment in disaster recovery systems will increase over the next two years.

The need for disaster recovery plans is highlighted by a recent study by Coopers & Lybrand, the accountancy Firm, which reported that more than 60 per cent of large UK organisations have suffered a serious control failure with a computer system during the past two years. And a Loughborough University study revealed that 70 per cent of businesses that suffer computer failure of one kind or another will be out of business within 18 months.

Computer equipment failures and nower failures are

> Local area network, and wide area network failures in particular, appear to be on the increase and there is evidence that downtime increases as the size and complexity of networks

The shift from mainframebased computing towards lar have become important distributed computing and client-server systems also has important repercussions for the integrity and security of corporate data. Some surveys suggest that between 60 and 90 per cent of corporate data now resides outside the traditional data centre on Unix and other data processing platforms.

While it is relatively easy to ensure the integrity of a mainframe data centre and that it is backed-up effectively, it is much more difficult to devise effective back-up processes for distributed systems.

Even where the back-up processes are properly defined, security consultants suggest they are often poorly implemented. For example, back-up tapes are stored at the same location as the original data. If there is a fire or other disaster which destroys the computing equipment on a site, the back-up data is lost with the original copy of the information.

Such surveys confirm anecdotal evidence from computer users, data recovery specialists and consultants whose experience suggest that despite the risks. many companies still have inadequate back-up proce-

Peat Marwick. UK accountants, showed that 98 per cent of organisations in the UK and Ireland have falled to implement the BS 7799 Code of Practice for Information Security management" which was published

Mr Michael Bacon, director of information security services at KPMG, commenting on the findings a few months ago, said: "Given the value to organisations of both computer equipment and data, it is extremely disturbing that such a large number have failed to implement these basic security

The scale of the security risk is daunting. In Britain alone, thefts of chips are estimated to have cost British industry £1bn last year, with insurance claims approaching £200m. The largest single incident of any type recorded by the National Computing Centre involved a theft which cost £750.000. But the cost of replacing

stolen hardware often represents only a fraction of the cost of lost data and soft-

most of the headlines, computer crime also encompasses other activities such as hacking and virus attacks. In the US, an estimated \$2.7bn was lost to computer virus infection in 1994 alone. The growth of networking and the Internet is raising the stakes. "Computer crime is now

rife and spreading at epidemic levels," claimed the organisers of Infosec 96, the UK's first big IT security exhibition, which was held in London earlier this year.

n Britain, four out of five organisations have suffered an IT security breach, according to data prepared by Ernst & Young and the Department of Trade and Industry. Experts in the IT security sector estimate that breaches cost UK companies more than £1.2bn a year with incidents rising at 12 per cent a year.
"It is becoming more and

more difficult to keep unwanted 'visitors' out of computer networks," says Peter Hill, director of Index PEP, one of CSC Index's research arms.

a third had no security policy. Another study by KPMG cal computer crime steals 8,500 computer viruses in circulation, with between 150 and 200 new viruses being written each month. In North America, a report on computer viruses conducted by the US-based National Computer Security Association, suggests computer viruses will cost North American businesses between \$5hn and \$6hn this year. The NCSA study, which involved 300 large organisations, discovered that 98 per cent had experi-

> attacks. The losses stemmed from costs related to finding and eliminating these viruses, as well as computer down-time. At least half of the increase in losses was caused by the new macro viruses which are spreading faster than any other type of virus because they can travel by e-mail and can prove difficult to detect because most users do not scan documents for viruses.

## Anomalies across international borders

Encryption will be widely adopted to protect financial transactions, despite national security concerns

global computer networks for commerce re-emphasises a long-running controversy: how to resolve the problem of data encryption. On one hand, companies and individuals, quite justifiably, want to keep their transactions private; on the other hand government authorities, again quite justifiably, are unhappy about possible misuse of encryption by crimi-

The connection between

The increasing use of tography - the science of data encryption - goes right back to the beginnings of the computer age. Indeed, one of the first computers in the world - the Colossus - was built during the second world war to help crack the German military's secret communications codes.

Ever since, national governments have attempted to control the use data encryption - insisting that they must have a way to monitor private transactions. In 1979, for example, Mr Robert physical computer system ments in Britain, more than computer systems and cryp- Inman, the newly-installed

cryptologic activity and publication poses clear risks to the national security." As a result, data encryp-

tion software was classed as 'weapon' and ranked alongside tanks and nuclear missiles as a 'strategic' export. It is still regarded as such by the US government, despite the obvious problems of policing the export of software over the network. Intelligence agencies such as the NSA, despite being non-committal in public, are anxious to maintain a strong hold on encryption - and de-encryption - techniques.

But, running contrary to

head of the US's National the concerns of govern-Security Agency (NSA), ments, individuals con-warned: "Non-governmental cerned with privacy and civil rights have fought against exclusive government control of encryption. One of them caused a

minor revolution in cryptography during the 1970s. Whitfield Diffie, a mathematician working at the Stanford Research Institute, conceived the idea of public key cryptography.

In place of the traditional single-key encryption that every secret agency had used, he proposed a dual-key approach which made it much simpler to encrypt

tional encryption methods is Technology (MIT), intro-

that they rely upon both the sender and the receiver of an encoded message having access to the key - in itself a security problem. There is always a danger that the key will fall into the wrong hands.

Public key encryption uses two keys - a public key, available to anyone for encoding messages and a private key for decoding them. This means that anyone can encrypt a message with the public key - but only the recipient, using the private key, can decode it.

In 1977, RSA Data Security, a company founded by three scientists from the The problem with tradi- Massachusetts Institute of

cryptography software and obtained US patents for the technique.

Meanwhile, Phil Zimmerman, an American computer programmer and political activist set about writing his own version of public key encryption, eventually publishing his software for per-sonal computers in 1991. Under the name 'Pretty Good Privacy' (PGP), he distributed it freely on US computer 'bulletin boards' and inevitably, it found its way on to the Internet and became available internationally.

The arrival of PGP fuelled

AS/400 Advanced Series While several computer systems offer 64-bit technology, AS/400 gives you something that none of the others can match: over 28,000 applications that can actually run on it.

Right now.

The difference is in the architecture. Powered by PowerPC RISC technology, AS/400 is every bit 64-bit - from hardware to operating system to software. Applications are already optimised for 64-bit speed and performance without the need for lengthy rewrites or time-consuming recompiles. A claim that no other company can make.

In fact, over eight years and five major upgrades, AS/400 has never once rendered a piece of software obsolete and we're not about to start now. Which means the software you ran yesterday will still run tomorrow.

Only faster.

It also makes AS/400 the perfect platform for today's power-hungry applications like data warehousing, multimedia and the Internet. And an even better way to protect your hardware and software investment.

Now, and further down the road.

So if you can think of one or two applications for 64-bit computing, call Noel Bradbury now on 0800 400 000 quoting reference FTT 1196. He'll introduce you to 28,000 you can choose from. Alternatively, visit our home page at www.as400.uk.ibm.com or write to us at as400response@uk.ibm.com

Solutions for a small planet

## logging on from afar

As the market grows, remote access systems are becoming faster and easier to use

The huge increase in the number of mobile has made remote access systems one of the fastestgrowing sectors of information technology. It has become more common for people to work where it suits them, using laptop computers connected by modems to the telephone lines to keep in contact with their offices.

ISDN (Integrated Services Digital Network) is starting to replace modems and is being beavily promoted by vendors for its superior per formance and security.

A network manager seeking to enable staff to access corporate client/server systems from anywhere they like will probably need new software at both the client and server ends and possibly new hardware at the server end. The market for server-based remote access systems grew 262 per cent last year, according to International Data Corporation. IDC's research analyst Mr Camiel Camps says this was because systems began to be installed companywide, particularly for access to the Internet.

The market is now being spurred by the development of remote node concentrators, devices which can greatly ease the implementation of company-wide remote access. At the client end, the growth rate is a healthy 30 per cent a year. This part of the market is dominated by Symantec's pcAnywhere which has around a 60 per cent market

Client access products, of which there are many, are usually very cheap and can be used on computers with little memory, but are often limited in their functionality, and especially security.

software systems are supplied by the leading network systems vendors such tively cheap and more flexible, but still may not provide all the functionality that is needed. Some may need to be augmented with and home workers other software packages. particularly groupware such as Lotus Notes or Internet software from companies such as Netmanage

and Quarterdeck. The more sophisticated and expensive systems, such as those sold by Shiva, are mainly proprietary, according to Ms Marina Smith, senior analyst with the Datapro consultancy. But she says the market is moving rapidly towards more standard solutions.

### Many pitfalls

There are numerous pitfalls for buyers. One is the incompatibility of equipment, notably some access servers with some modems. Another is the lack of expertise among resellers, especially with ISDN.

According to Mr Simon Robinson, marketing manager for network software supplier Attachmate, many basic packages fall down when put under pressure. "They may be enough for a few users, but they do not scale up to hundreds or thousands of users, they do not provide security and they become unmanagea-

ble," <u>he</u> says. In the past few years, remote access systems have been getting easier to use as well as performing faster users do not want to have to understand anything about the technology, and with some of the latest products they do not have to. Some are designed so that a sales person can load up the software in a hotel room and start to use the system in just a few min-

updates to their files by of these packages might receiving only the parts well cope with the task.

combined hardware and which have been changed since the last contact, instead of the whole file. This is one of the secrets of as 3Com. Bay Networks and success for remote access Cisco. These are still rela- and can allow downloading of the information needed in a few minutes instead of hours.

Mr Christopher Colisi, vice-president of Symantec's communications products division, says many of the benefits of the latest software will come to users when they upgrade to the Microsoft Windows 95 or NT (New Technology) operating system. Performance of the 32-bit version of pcAnywhere is 25 per cent faster than its 16-bit predecessor, says Colisi. It has been modified to cope with Internet access and deploys Microsoft's OLE (Object Linking and Embedding) object software to improve ease-of-use and reduce the amount of

training which users need from network managers. Users now have a choice between using the in-built remote access facilities of Windows 95 or NT, adding NetWare Connect to their Novell NetWare network operating system or taking on a specialised software package which may have more features such as security. Those who are particularly concerned about who may be getting into their networks and looking at their data may well prefer Windows NT to Windows 95 for its superior security.

Prices of remote access software products vary greatly, from as little as £50 to several thousand pounds. Buyers should start by deciding what volume of data they need to access and more reliably. Many and how fast they need to do so, advises Mr John Birbeck, managing director of the remote access division of Bay Networks. Simpler systems can be sufficient to deliver small amounts of data at relatively low speed, up to a limit of around 20,000 bits per second. If the requirement is only to pick up a few e-mail messages Users can get faster from time to time, then one II The future of fax in an era of e-mail . By John Kavanagh

## Still a preference for paper

Fax remains the most popular medium for messages, although e-mail is far cheaper e-mail attachment or file you cent coming from the labour rier (overnight), 40p by fax, onus is on them to connect

The whirring and beeping of a fax machine might seem outdated in these days of PC communication, but fax has a trump card: people still prefer to get messages on paper. This finding from new research shows that human nature is just as important to the future of fax as current developments aimed at

producing faster and more versatile machines. The survey of UK business users by fax supplier Pitney Bowes shows that two-thirds prefer to receive messages on paper rather than elec-

tronically. Fax also scores relatively well in terms of generating a fast response from the person contacted: 48 per cent of users said the telephone got the quickest response. 38 per cent voted for fax and 8 per cent for e-mail.

hese findings need to be viewed against the fact that fax is well-established, with 70m machines worldwide. Pitney Bowes says 5m new machines are installed each year and 55 per cent of users increase their use from year to year. Its survey also suggests that the real challenge from e-mail is yet to come: only 13 per cent of business computer users have Internet access, although 77 per cent are linked to internal networks.

However, anecdotal evidence suggests that there is no getting away from the

appeal of paper.
"Fax fits in with the way
people work," says Pitney Bowes vice-president Ms Deborah Sauer.

"People like paper, because it's transportable, you can read it on the train, you can scribble on it and fax it back. The preference for paper is also evidenced by the number of people you see printing out their e-mails. In addition, with e-mail you have to go into the system to get your mes-

Mr Lester Davis, fax product manager at NEC, agrees: "If someone sends you an

have to retrieve it and decode it and if you print it out it still might not be an exact replica of the original, with the exact layout and other features. Fax is, in effect, remote copying. so every copy is the same."

Users also see fax as the most reliable method of delivering messages, beating even the telephone. In the Pitney Bowes survey 45 per cent of business users voted for fax as the most reliable method, with 37 per cent preferring the telephone.

Mr Davis at NEC supports this finding, too: "You can scribble a fax message and you know it will arrive immediately, but e-mail might take a day or more and it's some time before you know if there's a prob-

However, companies are ignoring one big issue on which e-mail wins: cost. The Pitney Bowes research that the average shows annual telephone bill for big UK companies is £25m with half coming from fax

transmission.
In addition, transmission accounts for less than a third of fax costs, according to a separate US study by Davidson Consulting, which Pitney Bowes itself high-

Over three years, telephone charges account for 32 per cent, purchase price 14 per cent, and supplies 4 per cent - with the other 50 per

costs of going to and from a machine, queuing and oper-

ating the equipment. Ms Bauer at Pitney Bowes says better training can reduce this last cost: only 10 per cent of users had been trained. Users are ignorant

Deborah Sauer: "Fax fits in with the way people work"

broadcasting to several recipients, she says; instead they key the number and feed the document for each one individually.

Even so, costs are a weapon now being seized on by companies in the Internet business

The Internet service provider Uunet Pipex says delivering a 10-page document in the UK from Cambridge to London costs £27.80 by cou-

38p by post (overnight) and 15p by e-mail. Sending the same document to the US costs £2 by fax, £1.56 by post but still only 15p by e-mail.

Software and services companies are now marketing various products which seek to cut costs by combining fax, PCs and telecoms. For example, Delrina, which supplies software for sending a fax directly from a PC, has now added a £200 scanner to enable users to enter drawings and other paper documents and add them to their

few companies are going further: a new Company called Jfax gives customers a personal fax number which receives incoming faxes into its computer, where they are held as e-mail attachments. The service is £8 a month, including 100 messages; after that the charge is 15p per mes-

sage.
"With Jfax, faxes are sent to people rather than to particular machines," says director Mr Richard Bennett. "People can check their faxes, e-mail and voicemail from anywhere, for example by linking from a portable

PC in a hotel room. He sees the service being especially useful for people who are often away from the office or who work from home: they do not need a fax machine or a dedicated telephone line, although the

to the service to see if any messages are waiting.

However, fax machine suppliers themselves are not standing still. Machines using plain paper are now taking over, and combinations of printer, copier and fax in the same device are

fast appearing. Processors are being built into top-range machines to enable suppliers to customise them: for example to enable machines to store incoming faxes in memory and transmit them to a PC used by someone dialling in

from a remote site. Last month, Pitney Bowes became the first supplier to launch a machine which can transmit at 33.6 kilobits a times the 9.6kbits of most far machines currently installed. This follows recent agreement on a new international telecoms standard.

The company claims that these higher speeds, plus new data compression and error correction techniques can cut those annual £12.5m fax telephone bills by up to

85 per cent. But with all the new features, the enduring attraction of fax in the supposedly electronic office comes back to the paper it produces. As Mr Davis at NEC puts it: "Scanning and sending physical documents will be with us for a long time yet while offices are still based so

Electronic whiteboards • By Nusla Moran

## Latest trend in teamwork

Boards are now software driven, with shared work appearing on each team member's PC

The electronic whiteboard is emerging as the technology which will transform the personal computer from a personal productivity tool into one which supports collaborative working. Individual work on a PC can become group

work. The original concept for the electronic whiteboard was as a free standing, or wall mounted piece of equipment which would be a direct replacement for blackboards, or whiteboards, in meeting rooms. Now it has been scaled down to a deskperipheral which acts as a shared piece of electronic paper. And the trend is that, rather than being separate pieces of hardware, electronic whiteboards will be software elements of collaborative working packages, with the shared work appearing simultaneously on the screen of each PC.

The software approach to whiteboards was endorsed by Microsoft in its Netmeeting collaboration package, released in August this year in conjunction with version 3.0 of the company's Internet Explorer browser. The Netmeeting software supports the emerging industry standard for electronic whiteboards, which is known as T120 This means Netmeeting users can share whiteboards with users of other

T120-compliant packages. Like many of the concepts that have made computers easier to use, the electronic whiteboard was invented by Xerox, at its research centre in Palo Alto, California. The

1990s, was inspired by research into how computers can be used by groups to work co-operatively. Richard Bruce of Xerox who led the project says: "Having five workstations networked and using the same software, won't help people to work as a team. There can be no group leader, and people tend to withdraw into their own activities, because each individual is focused on a

separate screen." On the basis of this observation. Xerox conceived its electronic whiteboard, called Liveboard, as a computer to support collaborative work and meetings. Users can write or draw directly onto the 5ft x 5ft screen, creating electronic documents that can be seen and annotated by people in the same room. or by people working on a networked Liveboard anywhere in the world. The screen images can be printed out to provide participants with an instant record of the meeting or saved to a computer file.

Research by Xerox also pointed to a technology imbalance whereby people were spending 30-70 per cent of their time in meeting rooms that were not equipped with the technology they rely on at their desks. Liveboard overcomes this by allowing company databases, individual files and other resources to be accessed, and worked on, in

the same way as on a PC. While Liveboard has its own built-in computer, electronic whitehoards are now available as peripherals to link into any existing PC. An example of this is Softboard. from Microfield Graphics, of Beaverton, Ohio. Softboard is plugged into a PC using a standard cable and the soft-

ware to operate it is loaded

into the computer. Users

development, in the early write on Softboard with bar whiteboards means they can coded pens which are tracked by an infrared laser system. The data is sent to the PC in real time, and the corresponding image appears on the computer screen. Although screen images can be stored and retrieved, neither Softboard or Liveboard are capable of handwriting recognition handwriting cannot be converted into computer data.

Electronic whiteboards are now becoming a key feature of videoconferencing. In September, Microfield Graphics announced it was to integrate Softboard with Picturetalk Inc's video conferencing systems. Picturetalk already provides a way for people to meet virtually, instead of physically, to share visual content on a variety of client platforms, says Joseph Salesky, CEO of Picturetalk, of Pleasanton. California. Now, with the addition of encing, users may find the Softboard products, users can include freehand input. Prepared content such as to Greg Craven. Business slides and text documents can be shared, as can freehand notes and diagrams

nother videoconferencing company, PictureTel, is adopting a similar approach with its GroupView projector. Images projected in a video conference at one site can be simultaneously transmitted to a remote location. During a meeting these images can be annotated, and the transmitted changes en locations.

written in a meeting.

Although they make it easier for team members in different locations to work collaboratively, Ashim Pal, senior consultant at Ovum. the IT market research consultancy, says that for the moment electronic whiteboards remain a niche prod- more than they expected to." uct. The cost of electronic says Mr Craven.

only be justified in high impact applications. (The PictureTel projector, for example, has a UK list price of just over £8.000).

One example of appropriate use would be if design teams in remote locations worked together to discuss how one change to a design interacts with another. In this case the cost would be justified by reduced time to market, says Mr Pal.

He believes whiteboards will come into widespread use as a software element of videoconferencing packages. For the present, rather than writing freehand, users will rely on PC drawing tools to make screen inputs during the videoconference, but in future it should be possible to make inputs using a laser pen on the screen of the PC.

Indeed, there is evidence that in desktop videoconfe whiteboard more useful than the video element according Development Manager of Videolabs Inc. The company's desktop video and audio conferencing system includes the CU-SeeMe whiteboard software from White Pine Software Inc, enabling users to share graphics and data. If you are working with people you know it is more important to hear them, and share screens with them, than it is to be eyeball to eyeball, says Mr Craven.

This is particularly true of videoconferencing over the capacity of much of the communications network makes video transmission too slow to be useful in business applications. "Most users of our videoconferencing systems are finding they use the electronic whiteboard

## Data encryption anomalies

Continued from page 5

the encryption controversy even further - leading to widespread paranoia among government agencies, both in the US and elsewhere. Zimmerman has been vili-fied both by the security agencies - which see his work as dangerous - and by RSA Data Security, which sees PGP as a threat to its commercial interests.

Despite this, government attitudes to encryption vary. "There are three different approaches," says Mr Neil Barrett, a senior consultant from Bull Information Systems who specialises in security. "The US model sees cryptography as tradeable goods and, at least within its borders, it is not primarily aimed at controlling use. The US is fairly relaxed about citizens using security within its borders.

"By contrast, the French

model does not allow encryp-tion. If you want to send encrypted messages over the French PTT lines, you must have a licence, which is very difficult to get. Only banks and credit card companies and one or two exceptions

have a licence."

Mr Barrett goes on to describe the third - and perhaps the most interesting approach as adopted in Britain: "The UK's approach is relatively free and easy. I think there is a feeling that the UK's long history of success in code-cracking makes the security services confident about being able to break through any encryption scheme. In addition, the criminal law enforces the rights of government agencles. If they want to decode encrypted data, they can insist that the key is surrendered - otherwise the indi-

In his recent book, The State of the Cybernation, Mr Barrett examines these issues in greater detail and concludes that the use of data encryption will become more widespread - espe-cially as companies use the network for financial transactions.

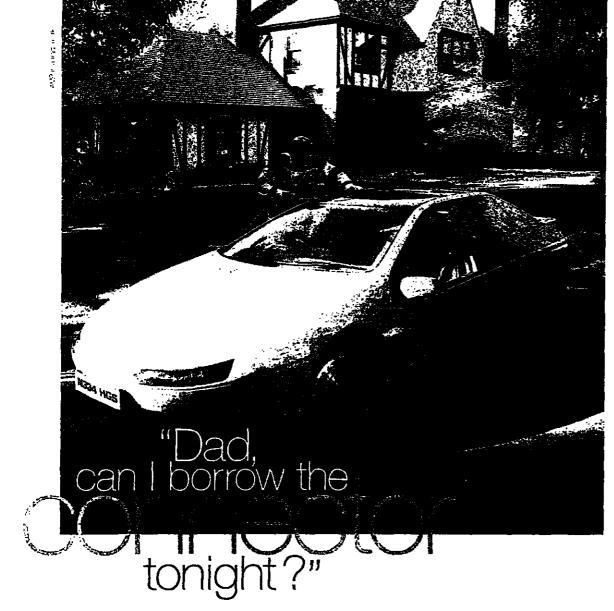

The different approaches of national governments obviously causes problems: companies and individuals wanting to encrypt data and send it across national borders must somehow cope with the anomalies.

Commercial software suppliers have pressed ahead with the introduction of mostly based on public key cryptography. Netscape, the top 'browser' software supplier for example has recently extended the Secure Sockets Layer (SSL) encrypvidual is in contempt of tion scheme for Internet communications to use a 56

character key to increase data security and Microsoft has introduced the Private Communications Technology (PCT) protocol.

The most important step. however, has come from outside the software industry. Credit card companies Visa and Mastercard have devised the Secure Electronic Transaction (SET) standard for commercial transaction on the Internet. Now widely supported, SET uses public key cryptography to safeguard credit card transactions over the Internet.

"Although it is still early days, it seems likely that SET will be the way things encryption techniques, go on the Internet. It has already gained a lot of support both from financial organisations and software suppliers. In the long-term. it will be what brings confldence to commercial users of the Internet," says Mr Bar-

Once, automobiles were mechanical. Now, they're also electronic. Equipped with computerized fuel injection, airbags, entertainment and security systems, even satellite navigation units. • Once, AMP was a connector company. Now, we're a company of many technologies, linking sensors, switches, optoelectronics, circuit boards, wireless components, and connectors into interconnection subsystems. And

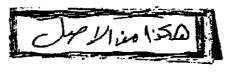

beyond. • Which is why transportation and telecommunications companies, as well as those in many other consumer and industrial markets, increasingly look to us to combine our diverse capabilities in unique and unexpected ways. To help make their products both more capable and more economical. \* You still may not think of a new car as a connector. But today they're safer, and more comfortable, because we do.

■ Printing on demand • By Paul Taylor

## Publish and be better off

Digital technology means business documents are now cheaper to reproduce

he arrival of digital printing-on-demand is changing the nature and economics of the publishing business

New machines from Xerox and its arch-rival, Kodak, 250. This means that if remove the need for complex and difficult pre-press work and create, capture, store and distribute documents tal printing takes the risk digitally. Typically, offset printing is a multi-step process involving creating, making ready, collating, finishing, storing and distributing a document. Digital on-demand printing, by contrast,

is a single process.
Its advocates claim that on-demand printing means a company needs only print the copies it actually requires, when it requires them. It is more cost effec-tive than traditional offset printing for shorter runs of up to about 1,000 copies which currently account for around 10 per cent of all print jobs. In fact, print costs are estimated to represent iust 6 per cent of total production publishing costs, the "hidden bulk" includes manpower, inventories and

Danon, senior vice president of Xerox's document production systems, says on-demand printing means that only the copies required for immediate use are printed. That eliminates the need for expensive storage and warehousing - which can cost four times as much as printing itself. Conventional printing has

a minimum run of around actual demand is for fewer copies, some will remain unsold. "In many ways, digiprinting company that has adopted digital on-demand printing, "We recently digitally produced a highly sped book for a custon whose potential sales barely stretched to 100."

In the language of the industry, digital on-demand printing means "no more dead horses in the ware-

New printing-on-demand machines also highlight the move towards more cost effective integrated multifunctional digital devices. For example, Xerox's Docu-Tech Production Publisher series of machines, first introduced six years ago. integrate scanning, network

Personalised patient information can be immediately published for clinic, hospital and doctor, eliminating the paper-record mountains typical of most medical facilities. Overall, Xerox estimates pages" published will increase at a compound annual growth rate of 29 per cent from 78bn last year to 216bn by 1999 and that digital printing will account for almost 30 per cent of overall production pages, compared with around 12 per cent in "As the concepts of print-for-one and distributeand-print proliferate, the number of pages eligible for printing will

says Xerox.

■ Call centres • By Michael Dempsey

## Phone services transformed

**Traditional** telephone systems are enhanced with smart software

all centres have entered the public consciousness through the explosion in direct selling operations over the phone. The IT industry was quick to claim credit for the successful debut of UK companies like First Direct, a Midland Bank owned telephone financial services operation, or the Direct Line

insurance service.
Direct Line sold motor insurance directly over the phone and then rapidly expanded into broader financial products. The downward spiral in the price of computer processing power had freed these organisations of the need for a huge staff sifting through paperwork, so the IT sector argument ran.

It was true that peither of these operations would have taken-off without comparatively cheap hardware, using reliable software to turn over the data generated by mass contact with the general public.

But until recently, the more obvious intervention of technology, ordering the management of incoming calls and drawing down information from computer databases to boost the telestance, has been ignored.

Suddenly, the economic potential of harnessing old-fashioned telephone exchange has dawned on companies across the globe. One sure sign of the call centre's cuhanced status is the new title bestowed on staff who answer the phone. Increasingly these are called agents, rather than opera-

only" resolution of problems. Many of the calls fielded by Harrogate fall into a catery of inquiry known to all IT suppliers as "read the manual" or RTM. These calls represent the expectation of average users who have better things to do than wade through manuals and assume the service-provider can sort out their problem in

meet its target of "one call

the space of a phone call. By inserting software that gives its own staff an instant entry into the bank's own best practice, NatWest is keeping abreast of the customer's needs. Electronic banking for domestic customers has received a lot of publicity, but at Harrogate one large institution is applying the lessons of consumer product support to keep corporate services running smoothly.

Case studys on demand printing. • By Paul Taylor

### Panasonic reduces manual labour

anasonic's television well ahead of production. documentation has to be manufacturing facilThe Cardiff factory manuproduced on time - otherity in Cardiff, Wales, claims it has significantly cut costs by switching its print production from commercial printers to facilities managed on-site using Xerox's DocuTech on-demand printing equipment. The company says it has

made savings of £50,000 a year by reducing wastage and that production lead times have been cut from 12 weeks to just two days. As for many other companies, manuals are an impor-

tant part of Panasonic's manufacturing process and have to be booked into the manufacturing resource planning (MRP) schedule factures televisions and microwave ovens for European markets and is a prime example of how to join document production seamlessly into manufacturing.

The company produces 50 different standard models that can vary widely in specification from market to market. A model run can be from a minimum of 500 units up to 10,000, with a To co-ordinate its outside typical life cycle of two

Each TV set leaves the factory with a registration document, guarantee card and a user-manual that has been translated into various European languages. The

produced on time - other-wise the whole manufacturing process would be held

Before introducing its in-house on-demand publishing system, Panasonic contracted the work out. We used up to four commercial printers to produce the manuals, which were printed in black and white on semi-glossy paper stock print source, the company generated a full TV set production forecast and then a three-month MRP schedule that the printer had to adhere to. Typical lead times were 12 weeks," says

senior technical buyer.Inevitably, the number of televisions coming off the produc tion line differs from the forecast. In addition, the use of outside printers made it difficult for Panasonic to update documentation quickly and the lack of flexibility meant Panasonic had to dispose of out-of-date peterm

manuals, worth about \$30,000 each year. To overcome these limits tions, Panasonic has installed a Rank Xerox DocuTech digital publishing system. "By switching to an in-house digital print system, we have print capacity which is flexible enough to meet future demand," says Mike Palfrey, Panasonic's Mr Palfrey.

## Document management & 69/Ceorge Stack pening new doors

Boosted by the spread of intranets, document management systems give wider access to business information

ocument management is starting to become recognised as an essential component of modern office technology. With imaging, workflow and groupware systems, it promises to make available a much wider range of data to many more people. At the same time it will replace old bureaucratic ways of working with more modern, quicker and easier electronic

Playing the role of corporate librarian, document management systems take charge of text and graphics produced by word-processing software and spreadsheets. They will be increasingly able to handle audio and video components. Overshadowed by groupware in the past few years, document management has only recently become recognised as an technology in its own

Before, it was seen as either a specialised system for heavy data processing jobs such as insurance claims, or as an aid to desktop publishing for in-house generated brochures and the like. Law firms, being document-driven, were keen

Document management is by no means yet a clearly defined market

early adopters, but they were not followed by a rush of others. Now document manage-

ment software is being taken up by a much wider market. It may be used instead of or in addition to a corporate groupware system such as Lotus Notes, which offers only limited document management facilities.

"It is starting to become a part of the mainstream, though it is not quite there yet," says Ms Joanne Bonnett, Filenet's marketing programme manager for the Saros document management product.

The sector is growing at 50 per cent a year and will reach \$1.2bn this year, according to research from CAP Ventures. "The market is moving into higher gear," commented Mr Bill Zoellick. its research director. All recent research on the technology points to it being poised for rapid growth. One example of its spread-

ing popularity is Royal Dutch Shell, which recently took a worldwide licence for 42,000 users of the Saros soft-

Another user is Abbey National, which has bought Interleaf software to enable it to transmit documents to 15,000 users in its branches across the UK by satellite broadcast. The bank aims to save £1.7m in the first year of running the system and to re-coup the total cost of its investment within three years. A third user is Ford Motors, which is using Documentum software to distribute information to its customers and dealers.

Interest in document management has been increasing largely because of the Internet, says Mr Alan Jeffries. European marketing director for Interleaf. "It has made many more people aware of the volume of information which is available and which needs managing electroni-

cally," he says.

Mr John Newton, cofounder of Documentum and its vice-president of European marketing, agrees, adding: "It is the spread of intranets (corporate networks modelled on the Internet) which is now driving growth in the market."

Managers are also realising that vast amounts of computerised information are held by staff outside corporate databases and beyond any form of control. This may include financial plans, price lists, bid documents. technical drawings, contracts, company standards and policies and other information essential for the busi-

the document does not turn up for work or the machine on which it was held fails and there is no copy, there is a crisis," says Filenet's Ms Bonnett. "Document management allows companies to overcome that situation." It is by no means yet a clearly defined market. Many companies operating in other parts of the soft-ware market have, or would like to have, a presence in document management. This

which have taken place. The workflow and imaging systems vendor Filenet bought Saros; the network operating system company Novell bought SoftSolutions; the database vendor Informix bought Illustra. Potentially important new alliances were formed by OpenText with Odesta and buying CP Software Group with Unipearing.

is clear from the number of

mergers and acquisitions

plex. Documentum appears to be the market leader in terms of the power of its product, according to research group Ovum's evaluation, but research from Delphi puts Interleaf first in market share with 20 per cent, followed by PC Docs and IDI with 12 per cent

Most systems run in a client/server structure, with the user on a client machine requesting a document and the server searching for and delivering it. Increasingly the server employs 'object' software techniques to ease the re-use of existing soft-

Prices range from about £50 per user to about £500, depending on the scope of the functions; buyers have first to decide exactly what they may want to do with it. Ovum warns that prices for more complex products are unlikely to fall in the next few years, as vendors will be increasingly squeezed

by freeware or bundled document bandling functions from operating systems and database suppliers. This will prevent the specialists from gaining the mass sales which could produce those lower prices, says Ovum. Lack of standards is proba-

bly the biggest snag at present. Users cannot rely on the compatibility of different products, and standards. could greatly increase the use of the technology.

ODMA (the Open Document Management API, or Application Programming Interface) is becoming a more significant force, while the Document Management Alliance's specification may eventually be able to make communication between document management systems as routine as between e-mail

However, at present it is the Internet which appears to have the most potential to impose standards on competing producers.

Database management systems

### The goal posts have moved

Influenced by the Internet, the role of the company database is changing, writes Philip Manchester

or the last twenty ┥ years, database management systems have maintained so-called 'structured' data - customer tions will be a primary account codes, sales figures, means of achieving competioutstanding balances and so on. But now company databases are increasingly called upon to cope with unstructured data - text files, images and multimedia data.

New concepts such as document management and data warehousing are also changing the uses to which data is put. And the growth of Internet-based systems has altered the way data is viewed. The flat 'hypertext' model used on the World-Wide Web is replacing the conventional view of data as a strict hierarchy where, say, a customer account is stored at the top of a pyramid with orders and invoices beneath.

Inevitably, these changes demand new ways of storing and accessing data. US researcher Meta Group, for example, points out that the traditional division between so-called operational data orders, invoices and so on and data for decision-making, such as sales trends and buying patterns, is disap-

"While most users are experimenting with this hybrid application form. 1998/99, decisional applicative business advantage

6000 6200

through IT." Meta Group Established database software suppliers, are faced. therefore, with the problem of combining traditional methods of storing and accessing data with more modern approaches. Oracle, the market leader, has set out to achieve this with extensions to its established relational data base soft-

"Users are increasingly confronted with information overload and are looking for new ways of coping with data. The use of the Internet is bringing in a plethora of thematic searches, instead of simple word searches, and the traditional tabular view used in the relational database is not appropriate," explains Mr Andrew Bailey. product marketing manager at Oracle UK.

"We no longer think of ourselves as a relational database company. The tra-

■ Doing away with wires • By Michael Dempsey

The idea of dispensing with the chaos of wiring that links computer networks is very attractive. Architects have learned to design wiring ducts into new buildings, but running kilometres of cable through an old construction can be a nightmare. "the wireless Lan" (local area network), flashing data between machines using radio waves, has an instant appeal to anyone trying to reconcile high technology with listed or ancient

Not every computer network is a potential convert to wireless connections, but some networking specialists have spotted a large market in wireless technology.

begun deploying radio technology connecting portable notebook computers Beaujon, a hospital uses this technology for bedside patient care, doctors and nurses accessing files with a hand - held terminal, A credit-card sized insert into the spare slot normally occupied by a modem card is all it takes to let the portable PC use an infra-red frequency to link up to the mix of video images, can be very taxing sages at a glance, even in a board meet. But Rich Redelfs, marketing director

## Computers linked by radio waves

Wireless connections offer greater flexibility to office planners - and encourage executive e-mail addicts larger, conventional hardwired net- for radio transmission. But most wire- ing. One very practical use of the wire- for mobile products, says this figure

Another Xircom client is the German police force in Saxony. Investigators following up every incident, from murders to car accidents, traditionally carried 150 forms with them at any time. Now that bureaucracy in held on PC notebook: police officers download

their field reports using Xircom cards. The appeal of a wireless connection here is that officers can get on to the Xircom is a \$136m group: it has main network without needing an extra physical 'station' to sit at; with one access point, a PC receiving the to networks. In the French town of signals, up to 12 users can download material simultaneously. But John Lindsay, a marketing manager with Xircom in Belgium, admits that this arrangement does have its drawbacks: "With a lot of users downloading at once, the process might be slow."

less Lan sites want to send and access conventional files of written data. And the cost of Netwave, Xircom's wireless PC card, is low and practical. Each PC card retails at \$495, with the radio interface to the main, physical network, costing \$1,850,

Lindsay emphasises the robust appeal of his cards: "We have compact cards - they don't have any protruding wires, which is important for users such as the police and doctors." The wireless business is still mostly

confined to vertical markets, says Lindsay - "but it's useful to people who want to increase their productivity". He cites "the higher executive category" as a target group: main board members develop an insatiable appetite for electronic mail, according to Lindsay, and wireless local networks could Multimedia applications, with a rich allow them to read their latest mes-marketplace is worth \$200m worldwide.

less Lan, involving Xircom's cards, was demonstrated in Austria this year at the annual engineering conference of PC-maker Compaq. The company presented its entire strategy for working with third parties through 30 presenters in ten different rooms: the wireless Lan shared files between attendees' laptop PCs, and every presentation was downloaded from a central server

The viability of wireless Lans has iust been underlined by a management buy-out at Xircom. The Netwave wireless product line was purchased by Xircom's chief financial officer. Jerry Ulrich, and the US company,

Another US group, 3Com, turns over \$2.3bn in the global data networking arena. It estimates the wireless Lan

should grow to \$1bn by 1999 - "more and more products demand linking through radio frequencies". But he also confirms that this

demand is emerging from a select number of vertical markets such as warehousing, or retail point-of-sale systems. As Redelfs notes, a wireless connection between electronic tills and stock checking computers allows a supermarket to easily reconfigure a store without worrying about the complexity of installing new wiring.

3Com is one of 15 participants in the US Wireless Lan Alliance. WLA president Jeff Abramowitz explains how his members can recoup an investment in R&D and make a profit by selling networking cards, costing \$500 . \$1,000. "People think the networking card can't be big business with this kind of retail price. But if you sell a million of them, your investment is worthwhile.

This market is growing at 53 per cent a

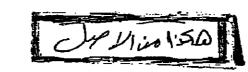

The Chicago Board of Exchange is an example of a location where a large number of itinerant dealers roam the Exchange floor and benefit from micro wave links from their PCs to central processors.

Novell, the \$2.8bn networking glant, which made its name writing software that keeps most office Lans up and running, has kept a weather eye on the emergence of this market. It has concentrated on sending data through a radio system employed for some mobile phones and known as Global System

Mobile, or GSM. Simon Palmer, product manager for Novell's mobile systems, says his company is exploring the use of GSM links to data networks with Sweden's Volvo

Cars and national post office. Last June, Novell demonstrated a link-up of 40 laptop PCs at an exhibition in Birmingham: the networking currency was radio ethernet - an established and proven Lan technology was "hitching a ride" on the latest way to link computers.

New directions: see page 11

## etermined to dominate

Despite innovations from Sun, Oracle and Netscape, Microsoft leads the office software market by a distance

personal computer software is so extensive that the company is often depicted as the ruler of the software world.

ual labour

Last year an Internet joker even suggested that Microsoft may be reaching beyond this world to try to dominate the heavens. A widely distributed fake press release announced the company's acquisition of the Roman

Microsoft did not appreciate the gag, but for many in the software industry who have felt the effects of the company's growing ambitions, it hit the mark.

Microsoft is now the world leader in many segments of the PC software market. Its strengths, and biggest revenue generators, are the Windows operating system and the Office suite of business applications

Microsoft holds an 89 per cent share of the world market for personal computer operating systems, according

icrosoft's influence research group. About 87 per cent of all PC operating systems sold this year will be Microsoft's Windows, the researchers predict, while the older MS-DOS still accounts for about two per cent of the market.

Apple Computer's Macintosh operating system comes a distant second with just over six per cent, while IBM's OS/2 has achieved a share of just over two per

The picture is similar in the "suites" market for packages of office applications programs, Microsoft Office was the market leader with an 84.5 per cent market share in the second quarter of 1996, measured in revenues, according to Data-

Lotus' SmartSuite package with 7.8 per cent of the mar-ket. Corel, which recently acquired the Wordperfect subsidiary of Novell, has increased its share of the market rapidly, but still came in third with a 7.7 per

In spreadsheets, Microsoft's Excel had an 80 per cent market share last year. In wordprocessors, Microsoft was far and away the market leader with about 70 per cent market share. Microsoft PowerPoint leads the field with 75 per cent market

In contrast, Microsoft is coming from behind in the market for Internet browser software, where Nescape Communications holds sway with a greater than 80 per cent market share. However, Microsoft's plans to incorporate its browser in a future version of Windows may enable the company to leapfrog its competitors.

One PC software company that has proven to be remarkably resilient to competition from Microsoft is Intuit, publisher of Quicken, the home banking and personal finance software. Despite intense competition In second place was IBM from Microsoft's Money program. Quicken remains the leader with a 73 per cent market share, according to PC Data, a US market research firm. Microsoft Money has a 23 per cent

market share. Both Intuit and Microsoft have launched new versions

grams over the past few weeks and the battle is now focused on forging marketagreements with banks. On this front, Microsoft appears to be moving ahead

Yet in some segments of the PC applications software market, Microsoft has only a small presence. Entertainment and games, for example, was the largest segment of the US consumer retail

Microsoft is gaining ground rapidly in the

intranet field

software market last year, representing about 19 per cent of total sales. In this category, Microsoft had only a four per cent market share. according to the company's own data.

Similarly in educational software, Microsoft had only a seven per cent US retail market share last year. In the "reference" category for electronic encyclopedias, dictionaries, altases and the

of their personal finance pro- like, Microsoft claimed a 30 per cent share of US retail

> While Microsoft continues to attack consumer markets, it is putting much of its efforts into expanding its role in the "enterprise" software sector with its Back Office suite of server products. Windows NT, Microsoft's operating system software for network servers, is the foundation of Back Office. It is gaining ground rapidly, particularly in the deployment of "intranets" office networks that adhere to the standards of the public Internet.

Can anything, or any other company stop the Microsoft behemoth? Many in the computer industry believe that Microsoft is unstoppable because it has greater resources than any of its individual competitors.

Yet Microsoft does face challenges. Sun Microsystems, the leading manufacturer of Internet servers, is capturing the attention of third party software developers with its Java programming language. On the back of Java's success Sun has launched a range of related products that constitute a new computing 'platform' to

Dominating the proceedings: SE Gates, Microsoft chairman, towers over other contenders in the office software market. He is pictured here in a video-link with NBC interviewers in New York

compete with PCs running Microsoft programs. Netscape Communications, which leads the market for Internet browser programs, is also on a course to clash with Microsoft. Even as Microsoft plans to incorporate a browser in a new version of Windows, Netscape is expanding the capabilities of its Internet program to compete with

Then there is the Network Computer(NC). Promoted by Larry Ellison, chairman and chief executive of Oracle, the NC is a lower-cost alternative to a PC. If network computers take off, they could pose another threat to Microsoft because they would probably deploy software developed by the company's

rivals. Microsoft is convinced. however, that the PC will remain the primary desictop computing system and chair it as a step backward in terms of technology.

however, Microsoft's dominant role in the software industry appears secure. Competition from Netscape Communications and others seems only to have hardened Microsoft's determination to remain number one.

## Web's impact

ditional relational view is just one component in a range of tools which we must give users. Other tools include ways to manage video data and things like spacial geographic information systems data. We have also built our ConText option for Oracle version 7 database to handle text."

Mr Bailey argues that companies want an integrated view of their data, no matter what the form or source: "The obvious application of this kind of technology is in managing textual data document management. I don't see document management as a completely separate application. It is just more information and should come under the same regime as the standard

structured data." Increasingly, the Internet and the World Wide Web are becoming part of "a data continuum", particularly when it comes to managing unstructured data, he says.

the goal posts because it is so easy to deploy information applications. We have picked up on this and our InterOffice product now uses the Web to store documents and references."

Other suppliers also see the Internet as having an important role in managing unstructured data. Document management software company Documentum, for example, has recently re-oriented its product strategy to take account of this.

"Without question, the web is the new paradigm for corporate information delivery. But even though the web is effecting the way information is distributed, customer's information haven't requirements changed," says Mr Jeffrey Miller, president of Documentum. The cost of setting up Web site as part of the corporate network can range from \$60,000 to \$2m and the cost of maintaining the data can be as much as \$450,000 a

year. He claims that these costs can be reduced by using Documentum's Right-Site software. RightSite filters and assembles the data for web pages when required, thus ensuring that users are looking at the most up-to-date version.

FileNet, another document management software supplier has taken a similar approach with its

Saros@Mezzanine software. "We see that the problems of keeping Web pages up to date as crucial to successful use of the Internet and Intranet systems. The problem with classic Web links is that they are static and you must rely on some one to update it. Our software links into the live document systems so Web pages will always be up to date," explains Mr Karl Matthews, product marketing manager at FileNet UK.

He describes Saros@Mezzanine as an 'enterprise librarian' which can bring any kind of data together and distribute it through the Internet and the Web. This has implications which go far beyond simple informathe Internet as an expansion to the traditional database. It could change the way companies work both internally and with each other.

"We see the Internet primarily as a communications medium. But it provides a platform for us to deliver document management and workflow applications and lets us think about expanding workflow beyond the immediate organisation,

says Mr Matthews. The traditional corporate database is now being seen as more than just a place to store data. As a result of the spread of applications, based on the Net, it is being transformed into the foundation of a completely new method of carrying out business. While it is still early days, the first building blocks of this foundation are being

## There's more to quality than meets the eye.

Quality can sometimes be difficult to quantify. With PCs, it's simple. The higher the quality, the lower the cost of ownership. Fujitsu ErgoPro PCs are designed to provide the highest levels of build quality and reliability, which means they are up and running faster and keep on running. But there are many other aspects of ErgoPro's focus on quality that help reduce costs.

Ergonomic keyboards, low emission monitors, low noise output and pin-sharp graphics are features that produce a more relaxed operating environment and hence improve end-user productivity. Comprehensive desk-top management facilities, pre-installed LAN software and plug-and-play connections make network control more effective and upgrading much easier.

High levels of security protection cause potential thieves to think twice and future-proof technology enables growth without system replacement.

It all adds up to superb investment protection. And at really keen prices. Check the ErgoPro range out for yourself, and do some comparisons. You could be in for a pleasant surprise.

## Digging deep into the data mine

The analysis of business information is becoming increasingly sophisticated as orgainisations try to make the best use of databases

s competition becomes senior managers fed by ana- Holos." more intense, leading Lorganisations are increasingly trying to use their data more aggressively in order to make smarter

Most large businesses have moved beyond paperbased reports to software tools which enable users to access data directly. However, they are increasingly moving beyond queries and reports to use interactive data analysis tools, such as multi-dimensional On-Line Analytical Processors (Olap), Enterprise Information Systems (EIS), data mining, data visualisation, desktop mapping and intelligent

There is a need to act more quickly to be competitive and make better use of information in databases ' says Bernard Liataud, cofounder of Business Objects (http://www.businessobuser information tool vendor. "Companies want more

lysts, so we have democratised access and reporting." Business Objects has recently written its own Olap analysis tool and launched the most comprehensive data mining partnership scheme in the industry. "Giving users access to

information is the first step, but they need to analyse it," explains Mr Liataud. "Access, analysis and reporting are part of the same workflow. Olap is the easiest tool for users and is the widely accepted first step in analysis. Olap technology has been

available for many years, but is starting to be much more widely accepted. "Oracle's purchase of the Express Olap tool was a smart move and was the major event in the market," says Mr Eric Woods, senior consultant with analysts Ovum, (http:// www.ovum.com). "It has had jects.com), the French end- an incredible gravitational pull and other vendors have taken similar steps, such as of their users to make more Informix purchasing Metadecisions, not just a few cube and Seagate buying

Multi-dimensional analysis and reporting is now seen as essential way of analysing business information, says Mr Nigel Pendse, co-author of The OLAP Report (Business Intelligence, ISBN 1 898 085 21 8). "There have been some extraordinary growth rates, such as Brio, trebling turnover in a year. Business Objects have rewritten their whole product to add Olap technology. Business Objects 4.0 isn't just 3.0 with extensions." Rusiness Objects' fiercest

competitor is Cognos (http:// www.cognos.com). one of the Olap pioneers, which is intending to bring data mining to the masses. "Users are recognising the need for a range of capabilities, so that they can understand information, as well as report it." says Mr Neal Hill, vice president for marketing. "Olap is the next step after

reporting, allowing users to explore their data. Data mining then acts as a software assistant which automates their analysis and helps

easy-to-use analysis systems to make the data productive

them find hidden patterns in their data. The next logical step is forecasting, because managers want to know what the effect of a relationship could be, so we are adding that with 4Tune from Right Information Systems (http://www.4Thought.com)."

New and novel visualisation techniques would follow in order to comprehend the full impact of forecasts, including mapping, says Mr Hill. "Once you have delivered a set of tools you will want to deliver the capability in software robot form, using intelligent agents. Two years ago we predicted that by 1999 our tools will watch your internal queries and automatically get related information from the Internet, which is the ultimate information source."

It is this move to bring more leading edge tools to users which is consolidating the products. Most of them have existed for some time. being marketed by small specialist vendors.

"Chief information officers will no longer tolerate tools which are not integrated," says Elizabeth Ireland, vice president of marketing at Mapinfo (http://www.mapin-fo.com), the desktop mapping vendor. "We are still in the early days, but with object technology there is an opportunity for software vendors to provide integrated suites of products."

usiness Objects also sees the neck close integration: "We sees the need for are partnering with seven data mining vendors, but will work more closely with one, because it needs to be fully integrated as part of a single workflow for the user," says Mr Liataud. We are investigating new

technologies, such as maps, drawings and alerts which can prompt the user for exceptions. We want to provide a universal decisionsupport functionality if we are to support the many large organisation. We have 10.000 at Shell, 8.000 at Dow Chemical and 6,000 at BT." Seagate Software (http://

oww.seagate.com), whose Crystal reports is a widely used access tool, purchased the EIS, Olap and Data Mining product, Holos. "We plan to package the Holos Olap

server with basic non-customisable functionality which can be given to the masses," says Greg Kerfoot, president of Seagate's Information Management Group.

"Intelligent agent technology is the most interesting." says Mr Woods, "It expands analysis and increases automation to make it easier to deal with vast amounts of data, making users more Comshare (http://www.com-

share.com) has incorporated intelligent agents into their Commander Decision product. which already includes an Olap, EIS and data min-

ing.
"We have created an object-oriented architecture into which these different features can be inserted, but which supplies a context for the user," says Mr Dennis Gangster, Comshare's chief technology officer. "For instance, we can insert a specific object just for sales analysis for brand managers in the consumer packaged goods industry. We are currently working with US research laboratories which are doing advanced research into data visualisation which we want to add just for users with very large databases."

Information Builders' (http://www.ibi.com) Focus Six visual information suite provides a set of tools in a managed desktop, which includes reporting, Olap, EIS, desktop mapping, data mining and data visualisa-

"We have to support the needs of novices, knowledgeable users and analysts," says Michael Corcoran, director of marketing. "The tool which can provide the most complete solution to data analysis is the tool which will be most widely deployed." Obviously, users are going

to need to learn how to use these new tools before they will be able to generate any competitive advantage. Cognos and IBM have founded tional establishments with third parties. The information tools can also be tried out at the Informix Superstore or IBM's new Teraplex complex.

Information suites have a lot to offer to organisations who need to improve their Worce recognition • By Philip Manchester

## Now you're talking the PC understands

Speech recognition software is being added to standard applications

peech is going to be "the future of the userinterface with computers", says Ms Anne Marie Deroualt, worldwide executive for IBM's VoiceType speech recognition products.

"Development of the Internet will bring far more people in contact with computers and this will force the interface to develop. At the moment our minds are tuned to the graphical user interface but in the future we see speech as one component in a multi-mode interface," she explains.

Speech recognition has moved a long way from its rather shaky beginnings as a gimmick to the point where it is now a viable option on ktop personal computers. Only 10 years ago, speech recognition demanded the power of a massive mainframe. Now there is a growing range of products that need only a PC with a standard sound card to carry out usable speech recognition.

Ms Deroualt says IBM's VoiceType software works on a relatively standard PC with a Pentium processor. It recognises individual words as they are spoken, making it ideal for command-based applications such as navigating around an operating system. It can also be used for dictation into a standard word processing program although pauses are required between words. IBM also has so-called continuous speech versions of the software - but like rival products from other suppliers - these are restricted to a specific context.

Now that usable speech processing is available on a PC, it is possible to add it to standard applications rather than working as a stand-alone technology.

Ms Deroualt says IBM is keen to see the VoiceType technology become part of a wide range of applications in much the same way that graphical user interfaces are currently used. It released a VoiceType toolkit to help resellers and other manufacturers build speech recognition into applications.

The UK software company Staffware has, for example, added VoiceType to its workflow package so that users can control their work "vocally".

ward and there was little we had to do to our software," explains Mr John Pyke, technical director at Staffware. "You can use it to instruct the program - call up files and the like. You can use it for dictation - or even to access the Internet." Mr Pyke is suitably impressed

by the accuracy of the technology and notes that it has no difficulty with regional accents: "It seems to understand my cockney accent which I suppose must be good for financial applications in the City."

Dragon Systems, a UKhased speech recognition specialist also sees the technology gaining wider appli-cation. Its DragonDictate software is now in its second generation and comes with a range of tools to help build it into applications.

"We saw that developers wanted to add their own features to the basic recognition technology. They might want to restrict the words used to fill in a field on a form, for example," says Dr Melvyn Hunt, joint managing director of Dragon

mprovements in the latest version reduce the time taken to 'train' the systems to recognise individual voices from half an hour to a few minutes. "This means you have a usable system much quicker than before with up to 80 per cent accuracy. The system will, of course, continue to improve as it learns more about an individual's voice," says Dr Hunt. He goes on to say that the

new version of DragonDictate can also recognise some continuous speech: "Numbers and post codes can be input continuously with the new version. This means, for example, you can put data into a spreadsheet much more quickly than typing." Mr Stephen Thompson,

managing director of Dragon reseller. Voice Write, says this feature is particularly attractive to financial institutions: "DragonDictate is very good for spreadsheet work. Once you are in the spreadsheet program it is still some way off, the first rally." he says. Voice Write has installed DragonDictate systems at Barclays and Lloyds banks as well as many smaller companies. Mr Thompson says the technology has improved substantially: "We work

with PC distributor Gateway

2000 at its London showroom

in Covent Garden. When we demonstrated the first version of DragonDictate, I had has improved so much with the new version that I can ad lib in the demonstrations and be confident that it will understand me.' Philips Speech Processing.

part of the giant Philips company and pioneer of speech recognition, has also moved towards including its technology in other applications. As the first company to produce a commercial continuous speech recognition package in 1995. Philips has continued to build the range of "contexts" including various branches of medicine and legal applications. "We have the radiology

version now working in two hospitals and a growing amount of interest in areas such as banking and finance," says Mr Roger Holmes, general manager of Philips Speech Processing in the UK. "We are now promoting the use of the software with various partners to take the technology and include it in their existing applications," he continues.

Philips's systems works in a slightly different way from IBM Voice Type and Dragon-Dictate in that it sends the continuous speech signals to a special PC server attached to a local area network.

Mr Holmes notes that for the applications it is concentrating on in the medical sector, this "batch" approach is quite acceptable - "we application for immediate real time recognition. But in radiology, for example, users do not need to see the words coming up on the screen as they speak".

While the day when we will be able to use natural speech as a substitute for a keyboard and a mouse is only expecting zero to nine steps have been taken and erate as speech technology gains a wider market.

## Charity will benefit

**Software Developers' Challenge:** London competition

One of Britain's oldest children's charities, the NSPCC, which protects those who may be at risk from abuse, will be the beneficiary of this year's "Software Developers' Challenge" which takes place during "SoftDev 96" at Olympia, London, later this

The National Society for the Protection of Children, founded 112 years ago, has requested a new human resources software programme to improve management and distribution skills at its 120 centres throughout the UK. Competing software

development teams at Soft-Dev. will have 24 hours to design the application to process data on the work of 1.250 NSPCC staff. The system will be used for the exchange of expertise in areas such as legal matters and fund-raising. RHEA International, the

oftware consultancy, based in Weybridge, will provide technical consultancy and judging for the competition Dr Alan Rushworth. RHEA's managing director, says: "The challenge, now in its third year, offers an exciting opportunity for developers to show off their skills - and for suppliers to

display rapid development

Last year, another charity the Save the Children Fund - received a tailor-made purchase and supply software application. valued at £20,000 and developed by the challenge winner, Safe Computing. This year's SoftDev event,

being held on November 27 and 28, takes place alongside WebDev 96. The two events focus on software development for corporate systems, the Internet and the World Wide Web through a range of features which include three high-level conferences and exhibitions: ☐ The IntraDev'96, focusing

on the latest technologies for intranet development. ☐ The Dynamic Systems Development Method (DSDM) RAD conference. ☐ Visual Basic user-group conference. ☐ Enterprise application development tools.

### Indian Software Pavilion

A new initiative at Soft-Dev'96 at Olympia will be the Indian Software Pavilion, sponsored by the Financial Times. This event brings together some of India's leading software development companies.

Mr Dewang Mehta, executive director of India's National Association of Software and Services Com panies, Nasscom, will give the keynote speech for a two-day seminar programme presented by Indian companies,

Mr Mehta's work includes extensive lobying with central and state governments in India – as well as over-seas – on behalf of the Indian software industry which is growing at more than 50 per cent a year and where software exports have increased 20-fold in the last six years.

Revenues for India's software industry exceeded \$1.2bn in the past year and will be worth \$5bn a year by the end of the decade, says Mr Mehta.

### Intranets

A four-page report on a concept that helps cut the cost of corporate computing

This "dealing desk of the tuture" was demonstrated last week in New York. The prototype, giving an ides of what traders will be using in the next decade, has been developed by Syntegra, the IT services and systems consultancy of BT and researchers at BT's laboratories in Martiesham in the UK. The desk of the tuture incorporates intranet facilities and shows how they can be developed in the global exprise. This week the prototype is being demonstrated to the banking community in Edinburgh

■ Cross-platform communication • By Tom Foremski

### wiring the office, the focus has changed from simply installing local area networks (Lans), to converting exist-ing Lans to create intranets - internal networks that help give staff access to corporate information and simplify the distribution of data within the organisation.

Intranets provide staff with connections to the Internet: they also bring the potential to lower substantially the cost of computing within organisations through developments such as network computers - simple computing devices that promise to lower annual administrative costs.

The US computer trade magazine *InfoWorld* found in a recent survey of businesses that the number of corporate intranets is growing dramatically. In a recent three-month period. 51 per cent of surveyed companies said they had built an intranet compared with about 39 per cent in an earlier survey.

"Intranet implementation is growing far more rapidly than anyone previously thought. Our last study showed that 13 per cent of our subscribers planned to implement- an intranet within 12 months, but this study shows a 31 per cent jump in intranet implementation in just 3 months. This level of significant growth in such a short period of time is truly amazing," says Jim Martin, CEO of InfoWorld Publishing Company.

The Info World survey reveals that the most popuintranet is to share or disan organisation. The web browser, either Netscape netWare product line. Navigator or Microsoft's Internet Explorer, is becoming the standard user inter-

## New ways to wire up the office

Many companies are converting their networks into intranets which will help cut the cost of computing

face for most intranet appli- ture to the Internet and corcations, replacing proprietary software that often required special training. Another advantage offered president of local area net-

by intranets is that the network technology is cross platform, so that it can be used with a wide variety of different types of computers. Since large organisations often have different types of computers that could include mainframes, minicomputers. Unix systems. IBM compatible PCs and Macintosh systems, tying such diverse platforms into a coherent network has been a problem. But Internet technologies such as the hypertext mark-up language (HTML) standard for text presentation, and the TCP/IP communications protocol,

hereas on the Internet the speed of the network is a problem, most corporations have fast Ethernet Lans already in place, making it relatively easy to create an intranet.

allow standard web browsers

to be used by virtually any

computer user to access and

share the same information.

Novell, which leads the market for Lan operating systems with its Netware lar reason for creating an products, has spotted the enormous market opportuseminate information within nity offered by intranets and recently introduced its Intra-"IntranetWare will help

NetWare users extend their existing network infrastruc-

porate intranets as they manage the transition from IPX-only network environvirus infection. ments," says Lee Doyle, vice

firm International Data Corporation. "As more NetWare customers take advantage of new Internet and intranet resources, they can add capabilities without having to sacrifice their existing investment in network

works and data communica-

tions at US market research

access and management." Novell sees a big opportunity in helping more than 55m users of its Netware Lan software convert their existing networks to intranets.

IntranetWare includes a directory, security, routing, messaging, management, web publishing and file and print services. It adds a web server, Netscape Navigator browser, a gateway between networking protocols, a multiprotocol couter for wide area networks, and support for telephony and multime-

Once an organisation has an intranet installed, it could take advantage of new developments such as network computers (NCs). Intel estimates that it costs an average of \$8,000 a year per PC-user in administrative

The idea behind NCs computers is to use an intranet to push most of the process-

ing power deep within the

network and limit the ability of users to install their own software which has a risk of

While NCs will not replace desktop PCs, they will provide greater access to computing resources. And, costing as little as \$300-\$500 each, they will allow corporations to give more of their staff access to computers and corporate data.

The popularity of intranets signifies a move away from the standard client/server network model; many companies are developing custom applications that make use of intranet technologies. At the US firm Sybase, for example, intranets are used to handle changes in human resources information.

"Formerly, if a staff member was moved or someone joined the company, they would have to fill out a lot forms which were then input into the computer system several days later. Now this is done by the staff member using an electronic form via a standard web browser,"

Other companies report that intranets allow their staff to set up their own web jects.

With ready access to the Net, staff can more easily research information and communicate with peers in other locations without the restrictions of proprietary Internet/Intranets: softward and services . By Philip Manchester

## Race is on to supply the needs of business users

The speed with which the concept of the Internet has moved from a fringe activity for enthusiasts to a serious proposition for business is staggering

even by the standards of the computer industry

t is little more than a year since terms like L'browser', 'network com-puter', 'World Wide Web' and 'intranet' emerged to describe entirely new concepts of computing. And yet, many companies are already planning to exploit the potential of electronic commerce and adapting conventional computer systems to take advantage of technology derived from the Inter-

net. The basic Internet infrastructure has, of course, been around for many years. What suddenly made it so attractive was the innovative software that has emerged from companies such as Netscape and Sun Microsystems. The new breed of so-called 'browser' software typified by Netscape's Navigator that sits on top of the World Wide Web (the Web) extension to the Internet opened up the power of computing to a wider audience. It made it easier to access complex data from a simple desktop computer.

The next stage - now beginning - is to extend this concept of easy access from simple information retrieval to conventional business data processing systems. But this demands significant enhancements to the basic Internet 'model' of computing. Security mechanisms, data protection recovery programs and reliable financial transaction systems are all needed on top of the basic Internet technology to make it viable to carry out business. Manufacturers and software suppliers are rush-

ing to fill the gaps. "The Internet took off because of the accessibility of Web browser software. It is an easy way to access data, independent of the computer being used. But we see it going far beyond this and becoming an extension of conventional network-" says Mr Eugene Forrester. Intranet/Internet market

software company Novell.

"Companies can use their existing network infrastructure and install the browser programs to get the same easy access to their corpo-rate knowledge-base," says Mr Forrester.

Novell's move into Internet systems - and the internal corporate intranet equivalent Habed role as a networking software developer. Mr For-

working perspective, other suppliers are coming to the Internet with a different view. Database management software company Oracle sees the Web and the Internet model as a natural extension to data management and client/server computing. This applies especially when used to build an intranet - an internal corporate version of the Internet.

– is a natural extension to its well-estab- net. You don't need to and install large amounts of

"The Intranet presents a more compelling cost-benefit argument than client/server computing was able to deliver. Client/server is a more complicated method of distributing computer power and there are overheads that don't happen with the Interupgrade desktop computers

The intranet offers a simi-

"This model has never been

beaten. The problem is that

mainframes are too complex

and cannot cope with the

demand for new services

such as multimedia. But

Web technology lets you

span business processes in a

way that you could not do

Predictably. Oracle is con-

improve the data-handling features of Internet/intranet systems. Mr Bruce points out that the basic software used to build information pages for the Web can only cope with static data.

Updating a price list or a product catalogue is labourintensive - "we can use the power of the database to deliver information dynamically. This makes it much easier to keep Web pages up

to date". Mr David Bridger, Internet server product manager at Microsoft UK, echoes Mr Bruce's comment about the static nature of standard Web pages: "You need to be able to get information from different sources and pull it together dynamically cause it is an expensive business having it in a static

But he also says Microsoft sees potential in other areas of commercial computing with the Internet as the base technology - "collaborative working, workflow and automating business processes are all helped by Internet technology. You can build electronic communities and enhance the relationship between supplier and customer<sup>™</sup>.

He goes on to describe several areas of Internet 'enhancement' on which Microsoft is working: "There is an awful lot going on. We have a number of projects under way which aim to plug the gaps in the Internet to make it suitable for electronic commerce. In addition to support for security and encryption standards, we are building a component-based transaction monitor called Viper and a message queueing system called Falcon.

"The key is to be able to integrate these components because there are so many processes you need to bring transactions over the Inter-

net." It is of course still early days - both for Microsoft and its rival software suppliers. The real proof of the viability of the Internet as a mechanism for electronic commerce has yet to emerge. it is a matter of when expanding conventional rather than if or how - this

Shanker Trivedi, marketing director at Sun Microsystems which has just launched the JavaStation: 'The shift to network computing,

rester says that Novell's software to build an Intrarecently-launched IntraNe- net," explains, Mr Rob Bruce, marketing manager tware software fulfils many of the criteria needed to turn at Oracle UK. the Internet into a viable lar cost model to the old platform for business commainframe systems, he says.

"We have concentrated our efforts on disguising the complexity of the network and building a set of services to make secure business computing possible. With our GroupWise workflow product, for example, we can offer guaranteed message delivery. We are incorporating C2 level security and working with partners to fill

"plumbing". A key trend is in stackable hubs - these hubs connect and act as the connection between local area networks (Lans). Hubs used to be

complicated pieces of equipment requiring a reasonable amount of expertise to set up and manage. But this is changing as companies bring out stackable hubs that can be as simple to use as plugging in wires more complex and larger chassis-based bubs and simpler standalone hubs, with some of the best features of both. Stackable hubs are now

available for all types of networks such as Ethernet or Token Ring. And they bave a small 'footprint' which makes them useful for smaller offices.

Futhermore, stackable hubs can be combined to grow with a company and allow users to expand their networks.

- Tom Foremski

### Market swiftly brings products into line

■ Groupware • By George Black

Lotus, the groupware market leader, has been the fastest to respond to the spread of corporate intranets

culty that even the most dynamic software developers have in keeping up with the pace of technological change. Microsoft planned its

Exchange Server to topple Lotus Notes from its perch as the top product in this field. But while it was developing the software, it failed to anticipate the rise of the Internet and the spread of corporate intranets modelled on the internet.

porting the Internet, but its late to enable it to shape Exchange Server to overhaul Notes.

Lotus Development was quicker than Microsoft to on the Internet is often unre respond to the shift in the liable and getting the tools direction of the industry. It to work together to produce which took it over last year, to help fund the development of new software to meet the requirements of the Internet and intranets. So Lotus, which has dominated the market for the past six years, looks likely to be able to continue to do so for

another few years. Virtually all groupware suppliers are bringing their products in line with Internet standards. Lotus has managed to do this by introducing a program called Domino which allows users to convert Notes into an

The groupware market intranet. Earlier this year illustrates the diffi-there was much speculation that Notes' position was threatened by intranets. All the elements of groupware appeared to be available on the Internet either as freeware or at very low cost.

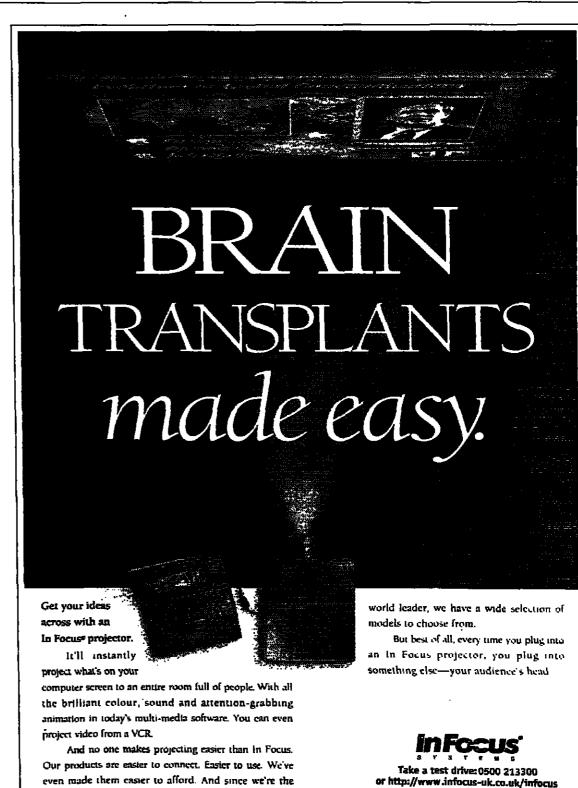

However, after further comparisons of the costs of the alternative systems and the launch of Domino, the prospects for Notes have been revised in its favour.

"The intranet is excellent for publishing, but groupware beats it for collabora-This year Microsoft was tive working," says Mr publicly converted to supthe consultancy Office change of policy came too Futures and author of a report on the subject pub-lished last year by Cambridge Market Intelligence.

"The groupware available was able to call on IBM. business applications is not easy," he says. A Xephon survey this summer showed that use of the Internet is more likely to complement Notes than replace it. "The Web absolutely does not make Notes obsolete," it summed up.

Lotus's Notes marketing manager Mr Jim Moffat regards the intranet as the "only real competition" for Notes, but believes that Domino has secured it against that threat.

### New directions: intranets

Business applications for Intranets . By Rod Newing

ntroducing an intranet will allow organisations to extend, cost-effectively, the reach of their main packaged business applications to a whole range of new users.

12 FT - I T

Existing power users of accounting, manufacturing, distribution, sales and marketing, and human resources systems will continue to use the full desktop software, called a "fat client", supplied with their client/server systems. However, browser access to packaged business systems can be given to a wide range of casual users within and outside the organisation.

The intranet expands the scope of the enterprise application because anybody on the network can access it, says Jim Johnson, lead architect for web services at business application vendor Dun and Bradstreet Software (http://www.dbsoftvare.com).

Somebody in the human resources department would continue to use their full client, but other employees would use our Java applet (see buzzword definitions page one) to update their

Ease-of-use is a key factor Intranets allow a whole range of new users access to business applications. But there are still technical problems, particularly with transactions outside the organisation

cials through its intranet. It has 1,400 users of its worldwide financial system, but has written an application using its own intranet tools which has allowed a further 12,000 employees to raise requisitions and get them approved before automatically entering them into R/3. However, vendors themselves will soon be providing these tools.

Oracle (http://www.oracle.com). the database and application vendor, has recently announced a series of Web extensions to its packaged applications. Web Employees offloads administrative intensive work from support staff to the employees themselves, such as job application processing, raising purchase requisitions and expense reporting.

Oracle will also extend use to customers and suppliers, through secure access to Microsoft (http://www.mi-crosoft.com) is already Customers provides sales

accessing SAP's R/3 finan- order entry, inventory and functionality. It is also planaccounts receivable, allowing a customer to check product availability, place an order, drill down to the carrier to track its progress and monitor its account to check invoicing credits and payments. Web Suppliers allows supply companies to access

ning employment opportunities, electronic correspondence, bank data transfer, just-in-time stock levels, plant maintenance information product quality certificates, help calls, project progress, employee directory, ad hoc financial reports, overhead allocation activity levels and simple workflow tasks

These extensions have a number of benefits. They reduce costs by allowing direct input of data, rather than tying up customer service and data input staff. Oracle has already reduced the internal cost of processing a purchase order from \$100 to \$15. "We can control who is

buying what and get better deals from suppliers," says Greg Harmon, Microsoft's SAP project manager. With intranet access. information is available to partners at any time, not

to a traditional graphical user interface is important, as it is costly to train employees and suppliers. and customers cannot be trained. Oracle refers to this situation as "switch on and use". In 1995, Silicon Graphics, the visual computing company, developed its own Pole Vault (http: // lurch.corp.sgi.com) technology to allow enquiries to a range of legacy business applications across its intra-

The ease-of-use of a

"No training was required because of the intuitive Net-scape interface," says Bob Zalusky, information technologist. "People are already familiar with the browser and only have to learn the business process. When we replaced our legacy systems with Oracle applications, the interface didn't change, no further user training was required and productivity

wider Web-based access to business nackages. A World Wide Web connection is not continuous because the connection ceases when a page has been sent to the browser and is only re-established when the user clicks on a link to another page. It is also subject to interruption. "We have quite a way to go in technology development before we have serious

It is important to draw

distinction between Lan-

based intranet access and

transactions on the Web," says Ashim Pal, senior consultant with analysts Ovum (http://www.ovum.com).
"Web technology cannot recover from an interrupted transaction, so until Web servers can handle transactions properly, this is beyond reach."

Microsoft is working to improve transaction integrity. Early in 1997 it will launch its "Viper" transac-tion co-ordinator to ensure that any transaction is fully posted to all application modules. Also, using its two main object technologies, the Distributed Component Object Model architecture embedded in Windows NT Server 4.0, its server operating system, and ActiveX, managed Web connections can be made without using existing protocols.

The dream of using a network computer for all soft-ware interactions is still a long way off. "The power of the Windows environment is impossible to deliver in a browser," warns Bobby Cameron, director of packaged application strategies at analysts Forrester Research (http://www.forrester.com).

The power user benefits from Windows integration for query, decision support, eet and OLE automation. The heavy duty Windows client will remain until the browser can duplicate it, which will take years. The 'thin client' doesn't exist in this context." A thin client is a

## Cage study & By Rod Newing A quick fix

An intranet at Dixons, the consumer electronics retailer, has improved customer service and reduced costs

The rapid installation of an intranet was a priority for Mr Keith Martin-Smith. Dixon's newly-appointed PC service director for its enstomer-support rganisation.

"I wanted to improve service levels quickly and easily," he says. "The company aiready had a Wide Area Network to link our point-of-sale terminals, which was running the TCP/ IP Internet networking protocol, so it was easy to connect our PCs.

Dixons is a leader in its field, with 800 outlets, including its PC World superstores. It took only two 'man weeks' to install browsers, to enable the file erver with Windows NT and Microsoft Internet Information Server, and to build a two-page Web site, using Microsoft's Front Page authoring tool. The site has links to each hardware and software vendor's own external Web site.

Knowledge-base "Overnight, I gave 200 technicians a connection to the outside world and we had everybody 'intranet capable' in four weeks,'

says Mr Martin-Smith. "It didn't take massive resources and the cost Was almost zero. We immediately increased our knowledge-base and the speed of our problem-solving, because we could get information and oftware fixes or upgrades

direct from the vendor's

Web sites."

Dixons Mastercare have added to the site solutions for predicted problems for new products, and the ents guide service arrange for each vendor. Any technician can post solutions to a "problem" section where it becomes immediately available. Managers draw up staffing rotas using

spreadsheet so that they can be converted to HTML, the Web format, and posted on the site. The engineers use a digital camera to record physical changes to products they support and will add video and animation of common upgrades later.

All the PC World stores are being added to the intranet. The first application will book an engineer's visit the following day. "It takes away the pain at busy peak times, such as lunchtime queues in stores," says Mr Martin-Smith.

"We are still amazing ourselves with what we can do with Front Page when designing Web pages enthuses Mr Martin-Smith, but we have outsourced the design of more graphical pages which will make better use of Microsoft's ActiveX technology when customers are given access

less profit

food new for tree wire

MINT LINANCE IN

WARE YOUR GE

Mastercare is also eveloping a pilot site using a beta of Merchant Server, Microsoft's electronic commerce software.

Dixon's experience is that the intranet requires very little support. "We had to develop skills quickly but our networking staff easily made the transition," says Mr Martin-Smith.

"The ease of use and integration of Microsoft products makes the cost of developing an intranet very low, because we can set it up in man weeks, not man months," he explains. "It isn't rocket science – and with good planning there is no risk to the company or

"By using the intranet we have improved customer service and reduced costs simultaneously, something which is rarely achieved in any other medium. The opportunity to use the intranet is endless and we have yet to discover its full potential."

**Groupware** market

## Plenty of scope for development

its user base in the past year, achieved by a big price cut which IBM's chairman Mr Lou Gerstner authorised to increase market share.

The company's target is 30m users by the end of 1998. spanning not only personal computers but also IBM RS/ 6000 and AS/400 servers.

### Viewpoint

Mr Gerstner is said to regard Notes as fundamental to IBM's future and he has therefore given Lotus plenty of scope to develop the product as it likes, while imposing a stricter business culture on the new subsidiary. Another potential threat to Notes which has been

Notes licences, a trebling of browser vendor, Netscape. It integration of its products has been building groupware features into its Navigator browser software since its acquisition of Collabra Software last year.

> Collabra, founded by an ex-manager of Lotus's E-mail team, launched its Share groupware system in 1994. The next version of Navigator (code-named "Galileo"), due for release by the end of the year, is expected to include all the functions of

Analysts have doubted

Share.

whether Netscape has sufficient resources to devote to groupware at the same time as battling with Microsoft for control of the browser market. But Mr Serge Bernard, Netscape's director of much discussed this year European intranet market 44 per cent had no plans to comes from the Internet development, says that the do so.

with Collabra's will enable it to compete with Lotus. He believes there are many companies in which Notes is used only on a lim-

applications. These companies will also be looking for cheaper and simpler groupware and more of their staff, he says and will therefore be keen to run Netscape programs alongside Notes.

ited scale and for complex

There is certainly still plenty of scope for growth in the groupware market, if computer users can be convinced of the benefits of the software. Xephon's survey found that only 32 per cent of sites used groupware and

10,000 reasons why the world's largest company chose TeamWARE

At NTT's Shinjuku Headquarters in Tokyo, 2000 TeamWARE Office users are communicating with each other, sending and receiving over 10,000 e-mail messages every day.

When choosing an IT solution for their e-mail, resource scheduling and information publishing needs, NTT had a number of requirements. Firstly they needed a solution flexible enough to support an initial 2000 users expanding later to a potential 4000 users. Secondly they needed a solution that could support a mixed community of PCs and Macs, and thirdly, they didn't want to spend large amounts of time or money training their staff to use the new system.

The solution that met the requirements was TeamWARE. The TeamWARE Office suite of groupware tools is; scalable, supporting users numbered from tens to tens of thousands, platform independent, supporting all major operating systems and so easy to use that NTT needed to train only 3% of their staff, who were then able to train their

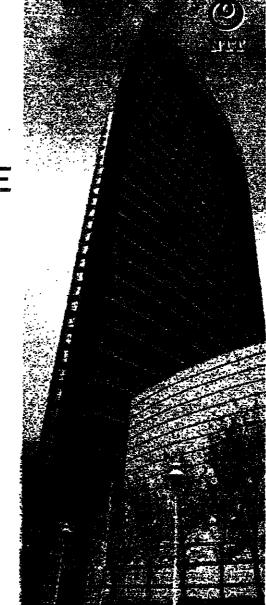

TeamWARE helps staff at NTT communicate and improve productivity. To find out more about how TeamWARE's intranet solutions can give your business the edge, visit our web site http://www.teamw.com, send an E-mail ccenquiry@teamw.com or contact us on the numbers below.

company and customers grow:

■ Database applications • By Geoffrey Naim

## Less problems for IT staff

Software houses are rushing to meet the demands of customers moving their databases on to intranets

he ease of use and low cost of web technology are powerful arguments in favour of moving database applications from existing networks to an intranet. But transforming corporate data into web pages is not straightforward and the software industry is racing to develop tools to

ease the task. Many of today's business applications, such as accounting or retail point-ofsale systems, depend on data stored in corporate databases running on mainframes or client-server systems. By building an support software, from intranet and moving these applications on to a web server, complexity and costs

can be cut a stroke. Users no longer need powerful PCs and applications programs, whose installation and support cause IT departbig headaches. Instead, they access web-based applications and corporate databases via cheap, simple-to-use browsers that run on any computer - Netscape's Navigator works on 16 different platforms, for

example. Oracle, the leader in client-server database software. takes the cost cutting further and proposes companies equip their users with \$500 network computers. These

designed solely for browsing and thus lack the local storage and complicated features of today's PCs, so reducing their price tag and support costs. "With an intranet, the database delivery mecha-nism has changed. Users do not need a local 'mainframe' on their desktop or software that resides locally," says Mr Andy Bailey, Oracle market-

Silicon Graphics built an intranet to give its sales staff cheap and easy access to corporate data. "We are able to leverage our data warehouse investment and extend the reach of this information worldwide, without making a huge networking investment," says Mr Mike Graves. chief information officer for Silicon Graphics.

ing manager.

The US workstation company is using a new webenabled version of the BusinessObjects decision French company Business Objects, to allow several hundred intranet users to access sales and marketing information in its data warehouse.

Many software hous rushing to adapt their database software or tools to work over intrapets. Oracle, for example, hopes to increase its dominance of the high-end Unix database market with software to allow companies to move existing client-server applications to the web or build new applications for their intranets. The company has developed its own web server technology, included free in the next release of its Oracle database. This allows

tions on a corporate database directly from their web browser, and while the primary market is Oracle users. the company this year unveiled new "cartridge" technology to allow Oracle

Web Server to integrate with non-Oracle databases. Oracle and other leading database vendors, such as Sybase and Informix, see intranets as a natural extension for their Unix relational database technology. But they are losing ground in

> By building an intranet and moving applications on to a web server, costs can be cut

their traditional client-server market to Microsoft, whose Windows NT operating system and SQL Server database provide a cheaper solu-

This trend is even stronger in intranets and a growing number of web servers use Windows NT instead of Unix. The Unix database vendors have responded with cheaper databases and intranet access products for Windows NT, but they face strong competition. Microsoft, for example, is trying to establish its BackOffice technology as a platform for corporate intranets. It has developed FrontPage to

nies to build web applications that more closely match their business needs. In the UK, Honda Manufacturing is using Amazon to create an intranet to link its factories to its parts suppliers. "Electronic data interchange (EDI) has not taken off really well and the web potentially can replace it," says Mr Tony Goschalk,

rivals such as Oracle.

Other companies have

developed similar products

and many interface the data-

base to a web server using a

standard called Open Data-

Base Connectivity (ODBC).

This is easier and quicker

than developing a custom

application, though critics

claim the extra layer of

interfacing software slows

"There is a slight time

penalty, but it all depends on

the database you are are using," says Mr Randy

Development,

marketing director at Intelligent Environments. The tools to move data between databases and web pages are immature, analysts warn, and require much manual fine-tuning to work effectively. The main problem is that the two worlds are essentially incompatible. The intranet is designed to handle unstructured content - text, sound and images - accessed randomly from web pages; a relational database, by contrast, contains highly structured data organised and accessed by rows and col-

umns. Object technology may provide a better bridge between the two worlds. The object-oriented language Java already allows browserbased mini-applications called applets to extract their data directly from a corporate database via the intranet (see cover story).

Object Design, a leading supplier of object database software, claims relational databases are simply unsuited to building intranet applications. It maintains object technology is better at handling the complex relationships between multiple data types, such as text, audio, video and image. Web sites on the Internet increasingly use a variety of types of data to present information in different ways and Object Design argues corporate intranets will soon fol-

European pacesetters . By Geoffrey Nam

Corporate intranets have caught the European imagination

urope has tradition-ally lagged behind the US in its adoption of the latest information technologies. But with corporate intranets the gap is closing rapidly as European companies warm to the benefits the technology promises over their existing networks.

European companies are very interested in what intranets can offer and the gap in deployment between the US and Europe is fairly limited," says Mr Ashim Pal, senior consultant at Ovum. the UK-based IT consultancy firm, which plans to publish an intranet report in Decem-

This strong interest in intranets contrasts sharply with the lukewarm attitude of many European busises to the public Internet. According to a survey commissioned by Digital Equipment, interest varies by country with most enthusiasm coming from UK and Scandinavian companies. Almost half the German and French companies polled believe the Internet is overhyped, while in the UK, the sceptics are outnumbered two to one.

"Information on the Internet is mostly in English and this will always be an impediment to the Internet's growth. Intranets do not have this problem as companies can create them in their own language." says Mr Paul Evans, marketing director with Digital Equipment Europe.

As well as the language barrier, European Net surfers are handicapped by sometimes creaky infrastructure and the afternoon slowdown when North American Internet users wakes up. According to the Digital survey, 24 per cent of European businesses believe their Internet infrastructure will be used primarily to access

predict their browsers will he pointed internally, running powerful applications and accessing corporate data on private intranets.

The figures for US busisses are 38 per cent and just 16 per cent, suggesting intranets could develop more rapidly in Europe than the

Europe has realised there is a competitive advantage in using intranets and does not want to be slow off the ground," says Mr Evans. By 2000, intranets will take 80 per cent of the European market for Internet software, he predicts.

As in the US Europeans are taking their first intranet steps with simple applications, such as information publishing and document

management. Here, the tech-

nologies are relatively stable

and the risk of failure lim-

ited. "If the intranet does not

work with these applications

then the business will still

the intranet, researchers can access articles, news and external Web sites, or debate topics in "discussion areas". sharing experiences and project results with col-

Previously, there was no central repository of inforwhere the information is mation, so researchers located, they can run a wasted time looking for information perhaps available in-house. The intranet has also improved research management by giving project leaders instant access to administrative data, such as man hours spent and procurement requests. "Project leaders can focus more on technical problems than on administrative issues," Mr Claudio Adriani, Olivetti's director of technology strategies, who claims productivity has also increased Interest in intranets is

growing beyond the IT industry. Kvaerner, the Norwegian conglomerate, is constructing an intranet to help integrate its growing business empire. Last April, Kvaerner acquired the UK company Trafalgar House and the first stage of its intranet will link

its Oslo headquarters to the

new London offices. Additional servers will later be installed in Houston, Singapore and Sydney to act as communication hubs for a global intranet linking 40,000 employees in 400 offices. Our main goal is to achieve effective information flow throughout our operations." says Jorgen Piene, Kvaerner's technology director. The intranet servers, supplied by Digital Equipment, will run Microsoft Windows

Other intranet pioneers can be found in Europe's pharmaceutical industry. where a wave of mergers has caused companies such as the UK's Glaxo Welcome to look at using the intranet to improve information distribution and collaboration between their many European sites.

Elsewhere, the clothing firm Levi Strauss has a project to link 60 per cent of its European staff using an

### Good news for business consultants

Continued from page 12

stripped-down PC (a low-cost NC) designed to work across However, occasional users

may find that the thin client puts on weight rapidly. "In order to have value, the browser has to get bigger to support groupware." argues Mr Pal. "This means it gets larger and more like an existing chent. People will find out in two years that they have the same level of complexity as a fat client."

۲.

An interesting long-term between the client and solution to these problems is IBM's San Francisco Project (http://www.softmall.com/si). IBM has teamed up with more than 50 software developers, including Computer Associates, Dun and Bradstreet, JBA, Lawson, IBS and Marcam, to produce high level application frameworks using Java, Sun's new Internet programming language. These basic frameworks will be adapted by each vendor for its own market and con-

The intranet looks like being good news for consultants, who can now start planning to revisit all their past business process re-engineering projects. They will soon be able to change their client's business processes again to make use of this new functionality! Nevertheless, the intranet does offer the opportunity to use existing applications to increase customer service while figured across the network reducing costs.

### Software solutions . By Rod Newing

## In sales, it's grow or die

Integrated sales and marketing systems are still not being used by many businesses - and even those that do use these software packages are not receiving the full benefits

tion technology for their sales and marketing. The latest Softworld survey for sales and marketing systems (http://www.softinfo.com) shows that 81 per cent of respondents, down from an astonishing 95 per cent a year earlier, perceive a gap between what is possible and what is being achieved.

However, only 31 per cent of them are using an integrated sales and marketing system and the majority (51 ner cent) are still using con-

Sales and marketina systems

tact management software. Integration with existing systems is considered the biggest barrier to implemen-

"Organisations tend to expect an all-embracing sys-tem to be delivered on day one," says Wendy Hewson, a principal in Hewson Consulting Group, (http://www.hewson.co.uk), a specialist sales and marketing IT research group. "Political and techni-

rganisations are still nies are leading to an indefi-not realising the benefits of informa-benefits of informa-mentation with consequent mentation with consequent loss of benefits."

The benefits are in making sales and marketing more efficient and effective, as well as in making better use of the different resources available at appropriate points in the sales process.

"These systems are very

easy to use," says Clive Burrows, co-author of Ovum Evaluates Sales Force Automation, (http://www.ovum.com), "so the salesperson only needs to know how to connect the cable in a hotel room. Once they see the benefit, they will use the system more and more. This will give the marketing department better information, so the production department will start to get better forecasts. They will get more faith in the figures because they can see more information.

"At that point, everybody wins, especially the salesman, who will have to complete fewer reports."

Nevertheless, the functionality of the packages available is holding back more widespread adoption of sales and marketing software. "Activities such as contact management, sales activity reporting, direct mail and telemarketing are simple mechanistic tasks which are well-supported by systems." explains Mrs Hewson. "Systems for these have

been available for some time and users requirements are well-known and catered for. However, co-ordinating an organisation's contact strategy with a customer or prospect across the most cost-effective marketing channels, typically involving direct mail, telesales, different teams of field sales representatives or distributors, is very difficult to do well. Systems have made little

Wordprocessing packag A 1500 Mobile phones Same of the same Portable PCs/laptops/palmtops Internal E-mail system The internet/world wide web S. Water to the Contact menagement software Lead tracking software Mobile data communications THE TOWNSON Postcoding (PAF) software stical analysis/EIS enf Section Section Commences Call contre/CTI evsterr

eling technologies in use now and the coming year

progress to date." "The US is more advanced than the rest of the world." reports Mr Burrows, "In Europe the only major players are Point from Germany (http://www.pointinfo.com), which is strong on call centres, and Oxygen (tel: 44 (0)181 740 7440) from the UK, which has a kit of parts to build the system you want."

Most organisations are not migrating to more modern packages, but replacing in-house systems. This suggests that the market for packaged software is relatively immature.

"Siebel (http://www.sieleader," predicts Burrows coauthor, Beth Barling-Twigg, "although they are still new and don't yet have a full

implementation. However. they are winning the big orders to the extent that their main competitor is in-house development."

Mrs Hewson is forecasting substantial growth in 1998. She reports that there has been little growth from 1994 to 1996, with fewer but more sophisticated systems being sold. In 1998 and 1999 she predicts rapid growth as a result of product strength and increased competitiveness between users.

"A trend will emerge of switching from outsourced operations, such as telemar-keting and direct mail, to bel.com) will be the market internal systems in order to get ownership of data and a single customer view across multiple communications channels," she predicts.

However, a sophisticated sales and marketing package is not easy to implement, because of the range of tech-nologies involved. We are advising organisations very strongly not to implement systems themselves," warms Mr Burrows.

With client/server, a data-

base, mobile computing, computer telephony integration and networking, very few in-house IT organisations have the range of skills. If you need a new system, you need it quickly and in-house staff will take 18 months to get it wrong. Using the vendor will be fas-

■ Support for the sales force

## No simple solutions

Trouble-shooting for a remote sales team is far from easy, reports

Tom Foremski

upporting a remote sales force with adequate computing services is not an easy task. There are significant issues of how to support staff who may be rarely in the office - with software upgrades, training, and creating the right computing infrastructure.

There are also issues of security, since providing outside links into the central office brings the potential for unauthorised users finding their way to sensitive company data. And while there are many solutions available for remote access, the number of options, configurations and parameters can be overwhelming to an organisation's already overworked

Supporting a remote sales force means more than just allowing staff to run spreadsheets or word processors on portable computers, with inventory data, delivery schedules and prices; it also needs to be able to file sales orders and track their status. This means access to the company's database and, traditionally, this has always been a difficult task. When problems arise, troubleshooting is difficult because the salesperson and their computer may be hun-

dreds of miles away. A general rule of thumb is that supporting a remote worker is about a third more expensive than supporting a local Apart from solving the

technical problems, the other half of the coin is deciding how to manage a remote sales force. Experts say that guidelines must be established that place an emphasis on training staff to enable them solve some basic computing problems

It also means setting up a schedule to update the applications on portable computers when the salesperson visits the home office - and making sure that staff are using the right versions of

software programs that they need to carry out their

work. Connecting with the main office is achieved in several ways. Some companies opt such as Lotus Develop ment's Notes software. This helps distribute marketing information, collect sales orders and access data about customer purchasing. Notes can be used to prepare pre-sentations, with several users participating in the process through modem connections. Notes also provides security to prevent outsiders from tapping into the network.

Other solutions providing remote access to the central office local area network (Lan) include Novell's Netware Connect and Microsoft Windows NT Server Remote Access Service.

hese two applications allow a sales staff member in a remote location to dial-in to the main office and make it seem as if they are just another local node on the network. Data transmission is slower because of modern occasional links into the connections, but there is a office. A mobile sales force lot of value in having full needs access to the latest access to all files and application

Similar remote access applications include Simware's A2B, Attachmate's Remote LAN Node, and Funk Software's Wanderlink. In addition, there are remote control programs such as Symantec's pcAnywhere and Traveling Software's LapLink which allow a remote user to take control of a PC from a remote

The future for connecting a remote sales force, however, lies with Internet technologies and Internet enabled database systems that can generate web pages on-the-fly. Using a web browser as a universal user interface, companies can set un special web sites to support their sales force.

The web site can include electronic forms to accept sales orders and handle data queries, cutting down on paperwork. A company's web site connected to its database, can provide realtime data on inventories, billing and delivery sched-

Continued on facing page

US companies are generally more advanced than those in Europe in applying sales and marketing systems. Above: the service centre of US West, the telecommunic company, in Phoenix, Arizona. US West has partnerships in the Europe, including Telewest, the cable company, and One 2 One, the

ter, cheaper and more effec-

The increasing use of implementation assistance is supported by research carried out by Hewson Consulting Group on behalf of Mercatus, an association for the profitable use and development of IT in sales and marketing. This predicts a ratio of licence to services revenue of 40:60 in 1998 and 30:70 by 1999

Strategic marketing, planning and campaign management are vital areas which are not yet fully supported by available systems. Existing software is largely single user, aimed at helping teams of cross functional managers to draw up plans.

"It acts as a facilitator, records the views and assumptions they make and plays back the results of their assumptions," says Mrs Hewson. "It is only adequately supported by 10 per cent of systems.

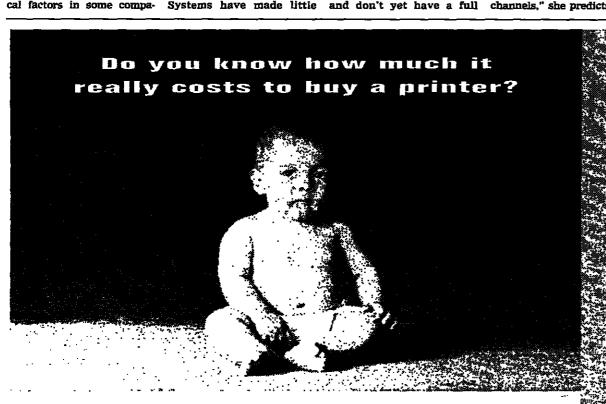

"It is exceptionally difficult to do as you can't unbundle the software from the marketing techniques involved. Planning requires fax 01908 677850.

integrating hard data from marketing systems with 'softer' data, such as customer needs, competitive positioning and attractive-

The sales and marketing software already incorporates in its logic a complete model of the organisation's products, markets, channels and customers, so it would be natural to incorporate a planning and modelling facility which could accept and record the soft data, while providing manages with the hard data thev

Meanwhile, Ovum is enthusiastic about the benefits offered by an integrated sales and marketing system. "Can a business afford to wait?" asks Burrows. "In this competitive age. it's a question of grow or die."

Membership of Mercatus is open to vendors and end-users interested in the profitable use and development of IT in sales and marketing for an annual subscription of £295. Contact tel: 44 (0)1908 677840,

# New ways to plan a global business

Managing complex relationships between global organisations presents a substantial challenge to sales and marketing systems

L isations having to repond to increasing globalisation. Their customers need the banks to have a good understanding of their overall needs and investment strategies; banks must offer consistent advice across a range of markets, products and graphically separated execuregions and design solutions which will add value to their customers' businesses.

"We have a huge global customer base, so we are joint client marketing strateconstantly trying to improve and stay ahead of the competition," says John Weguelin, senior vice president of Global Capital Market System at Bank of America, the US bank with offices in 38 countries around the world.

"We need systems to help us to identify and leverage giobal investment opportunities, integrate and distribute economic research and market data and share comprehensive customer informa-

However, traditional organisational structures, based on product groups and geographical locations, are poorly equipped to provide a lent tool which will allow

nvestment banks are one uniform product range and of a wide range of organ-services in each market in each financial centre. Groupware products, such as Lotus Notes and Microsoft Exchange, are ideal for building relationship management systems.

A relationship manage-

ment system allows geotives with different market skills to share information about each main client and so work together to develop gies and pitches. As well as providing complete details of all enterprise-wide relationships, contacts and meetings, a relationship management system can provide prospect status, potential investment needs, responsibility and date and nature of next action, including dele-

gated actions. in 10 different countries and they expect us to be one organisation," says John Odmann, project manager at Svenska Handelsbanken, the leading Nordic bank with 500

"Lotus Notes is an excel-

staff regardless of location to supports customer informabuild up a more complete tion, external news, internal picture of the client's news, to do lists and credit requirements and needs."

Such a system enables the preparation and management of individual global client marketing strategies and allows monitoring and maintenance of the deal pipeline, including forecasts.

well-designed system will also provide manage-ment information, covering areas such as growth in multi-product clients, monitoring success of cross divisional account teams or reviewing consolidated cli-ent profitability.

Anybody in any office can find information on current and potential clients, covering all parts of both organisations throughout the world and in all markets. The systems also allow access to internal electronic professional information libraries, covering areas such as products and services, financial instruments and market research. Perhaps most importantly, they allow dispersed staff to conduct group discussions and draw up joint client market-

Standard Chartered Bank, which has a network of 600 offices in 40 countries, has used Lotus Notes to develop an integrated system which

helps to keep existing clients. A client-focused relationship management system provides a very strong means of building long-term

market share and consistently growing profits. SBC Warburg, a division of Swiss Banking Corporation, the global investment

bank, is very aggressive about using its relationship management According to Otto Benz, IT project leader: "We will extend Notes to more clients, improve the quality of our presentations, increase our marketing options and stay

Telephones and marketing • By Michael Dempsey

# Machines are the answer Pinpointing the best sites

Companies have begun to exploit the integration of computers and telephones

o matter what the time of year, the IT sector always has a flavour of the month. And. judging by the flurry of marketing activity, extolling the virtues of call centres and the allied technology of computer telephony integration (CTI), it appears that linking processing power to the humble telephone is the next great hope for an industry that never misses an opportunity to market a concept.

to bear out the marketing turning to computerised call fewer salaried employees?

telecoms consultancy, has conducted interviews with 500 businesses across Europe that use CTI. It concludes that the market for these systems will grow from less. than \$100m (£64.1m) in 1995 to more than \$1bn by 2000. When it last carried out this survey, in 1992, only 4 per cent of companies interviewed had, or planned to, install CTI. Now that figure stands at 13 per cent.

Off-the-shelf packages which can exploit CII hardware or add value to other applications are also beginning to arrive in significant

This is opening up CTI to businesses which might not seem obvious targets for You're talking about a techleading-edge technology. The key lies in the way the technology extends the scope for contact with customers for retail outlets.

Milk Marque emerged in 1994 when the UK's statuand distribution, represented by the Milk Marketing grated voice response (IVR) system. The IVR is linked to system. The IVR is linked to marque's Sequent comtory monopoly in milk sale Dairy farmers could now choose where to take their produce. Milk Marque collects, tests and sells milk for some 20,000 farmer members. costs would become critical

A growing number of call The CTI market in Europe will be worth \$1bn by the year 2000. centre contracts would seem. Above: rapid call-handing with Nortel Meridian equipment

ture based on five areas has cess which does not require steering telephone inquiries help desk with one call ceninto a remote system with tre. This employs 12 staff working on rotas seven days Schema, a London-based a week, every day of the

To make such a lean operation work, Milk Marque divided calls between complex queries needing expert intervention and routine calls, in an operation dealing with 2,000 calls a week. It turned to Germany's Siemens to implement a call centre that would meet this

specification. Jack Griffin, manager for voice applications at Siemens in the UK, says that his company makes money out of CTI by focusing on integration. "Siemens might charge around £20,000 for a system, but that would buy a very basic box. It all needs to be set up very precisely. nology that's very hard to understand, the issue is how to get it serving the business

quickly. Milk Marque bought an automated call distribution system which takes calls and queues them into another puter system containing the results of milk quality tests. A farmer rings in, presses the hash key on his phone, The company realised that gives his membership and personal identity numbers, in a competitive market- and then interrogates the

push. But are companies just place, so a traditional struc- computer using IVR, a pro-

removing the need for some personnel, is not as ruthless as it might sound. "Many jobs in call centres are seriously boring," Griffin explains.

People burn out, they just don't last long dealing with these queries. We remove the boring bits of the agent's job so the customer only discusses real live matters with

IVR exploits the milk test database by pretending to be a number of computer terminals. It can pick up the latest information typed into the system and distribute this by following its own script. This process is known by the unlovely but memorable term "screen-scraping". Human intervention con-

tinues alongside IVR. Siemens has configured Milk Marque's call centre to flag calls from Wales and divert them to a Welsh-speaking phone agent.

Many call centres boast about the information made available to staff via computer screens. Griffin notes that Milk Marque no longer has computer terminals on its agents' desks - the human side of the equation

"Milk Marque bas devolved the tedious side of its work held on the large Sequent computer, to IVR. Machines talk to machines and people talk to people." This is the kind of result IT suppliers have promised for the last two decades, but rarely, if ever, delivered.

involves phone contact only.

### Application

The commercial possibilities of this have begun to impress users. London Electricity, the £1.3bn utility serving two million customers, plans to offer time and capacity through its new purpose-built call centre in Sunderland, hundreds of kilometres north of its London

London Electricity has centres to shed staff by been replaced by a central a member of staff. giant Rockwell, IVR from steering telephone inquiries help desk with one call cenlec and software that stores and retrieves call data from UK CTI specialist Inference. Gordon Critchlow, cus-

tomer communications manager at London Electricity. says his company handles two million calls a year. A London Electricity employee since 1968, Critchlow is about to relocate to Sunderland. Faced with an open market in UK electricity supply from 1998, London Electricity wants to be a national utility. And the potential of its CTI operation should add

to its turnover.
With ACD able to identify which supplier a caller is searching for, there is no reason why it shouldn't supply call centre facilities and experience - to other

CTI growth is not another IT marketing illusion. London Electricity is one of 220 companies that have joined the Call Centre Manag Association within 12 months of its founding. The reason behind this explosion in sales may well be the fact that smart users can sell on their own expertise with no extra outlay on the original call centre investment.

Business planners to a small number of toprange machines.

are able to make shrewd campaign decisions with the use of data

mapping software

or a very obvious con-cept, data visualisation has taken a long time to arrive. Expressed in its most simple form, it entails expressing a mass of numeric information in a colourful format.

This allows salient points to be grasped quickly, which in turn means pulling out facts that make a difference in the commercial market-

Data visualisation owes its current status to a number of factors: the entire field of welded together an ACD sys- data-mining, the search for tem from US electronics valid information in the giant Rockwell, IVR from mass of data acquired by computer-literate large busises, has focused attention on what can be gained by a shrewd evaluation of existing material.

Another reason for the rise of data visualisation is that when material is represented graphically, it is a lot easier to understand - and IT analysis has spread into all lev-

els of management. Businesses that need to react to market trends cannot wait for lengthy techni-cal examination of their sales data by distant specialists. They want to put the power to reach practical consultants at the fingertips of

Finally, there is the cost factor. Cheaper processing power is continually cited as the reason for trends such as client-server computers displacing the large, expensive mainframe of yesteryear. But the proliferation of powerful computers that do not soak up half a company's IT budget also allows the user to experiment with new 'flavours' of software.

IT suppliers who offer data analysis services using visualisation techniques can cost-out their time at a realistic rate if they are not tied

**II Data visualisation in marketing .** By Michael Dempsey

Keith Bear, an IBM business manager in the UK, is active promoting Diamond, a main sales offices, plus sup-£400 package that allows traders to apply data visualisation to financial statistics. Developed with US software house, Infinity Systems, Diamond is aimed specifically at risk management.

"Based on our models, it allows you to take historical data and project that forward. It gives you a way to test assumptions and correlation." says Bear.

Investment bank JP Morgan provided the risk factor data that underlies Diamond and JP Morgan's contribution to this product highlights the importance of having the right parameters fed into a data visualisation project.

Getting the rules right before you begin to interpret data in a graphic form is known in this field as establishing a "gravity model". The gravity model is essentially the weighting given to comparative types of information; while the actual data visualisation product may appear quite cheap, the kind of information it demands can be expensive to acquire.

### Network

Nigel Weston, business strategy manager for Daewoo Cars, relied on data visnalisation techniques to devise a dealer network that

Daewoo, a Korean conglomerate ranking as the 33rd largest company in the world, formed a UK vehicle subsidiary in 1994. Starting with a clean sheet gave the company a chance to place dealerships and support outlets where they could best serve the target customer-

# Web sites will make work easier

Continued from facing page:

ules plus historical information on each customer; taken a step further, it could also help to produce personalised presentations for cus-

An Internet-based solution also brings several important support benefits. Since the only thing the sales person needs is a portable com-puter with an installed web browser, support costs are lower. The web site can be set up to provide all the information and control the display of that information without requiring the user to run their own spreadsheets or presentation appli-

cations. applications can be devel- keting at Sybase. oped to add further func-

programs when required, them around constantly. Database companies such as Sybase, Oracle and Informix are rapidly adding fea-

tures to their databases that help support a remote sales force by using internet connections. "We allow you to take advantage of distributed

computing by giving a por-table laptop to a sales person. We've introduced things like message replication so that whenever you get the chance to get connected to the home system. you can replicate changes from your database to the corporate database," says David Heeth, vice president Java or ActiveX-based of enterprise product mar-

and let them call into the rather than have to carry home office and talk to someone about whether we've got that product in inventory or how quickly we can get 'a thousand widgets in red' out to the customer. We don't think that's the way to do it," he adds.

Opportunities

Oracle also sees big opportunities in enabling its databases to create web pages 'on the fly' for applications such as supporting a remote

sales force.
"If you look at the content
on intranets and the Internet, most of it is static pages. Whereas most of the interesting data that people and enterprises use within the enterprise, as well as "The centralists of the their suppliers and customers, is stored in a relational place. world would say "take away

database for security pur-poses, reliability, availability - all those things. So what we see is that the web is going to evolve from static documents to dynamic documents where the contents will be constructed when the user makes the request for what they want," says Schafb Abbasi, senior vice president of Oracle's tool product division.

While giving a sales force access to a web site brings the same concerns over security, firewalls can be constructed and security procedures established that makes it very difficult for outsiders to gain access to sensitive information. And ultimately, the same system could be used by customers to make place their orders themselves and conduct the entire sales process in one

Interview with Peter Schnell, co-founder of Software AG . By Geoffrey Nam

# Passing the baton to a new generation

Marketing is of paramount importance to IT companies, says Peter Schnell and he cites Software AG and SAP as examples of European companies successfully competing with bigger US suppliers. Today, Schnell's company has customers in more than 80 nations

n 1969, Peter Schnell, coset out to crack IBM's dominance of mainframe software by building a better

The technology he developed, Adabas, still wins by Mr Schnell until 1993, orders today, and the company, one of Europe's leading software houses, is poised for a new phase of foundations, to ensure the growth as a supplier of data warehousing software and other products that turn

Mr Schnell, however, will into this new era as he chairman at the beginning of this month. At the age of 58 a friendly bidder. and after 30 years in the "It's no longer true that decided it is time to pass the baton to a younger generation better prepared to cope with the dramatic changes sweeping through the oncesleepy world of database

Software AG, based in founder of Software AG, Darmstadt, is Germany's second largest software house behind SAP and, like the latter, it has stubbornly remained a private company. All the shares were owned when he placed the entire holding, reportedly worth around \$500m, in two private company's independence after his retirement.

Three of SAP's founders recently did the same thing. Times change, however, and Mr Schnell believes Software not be taking Software AG AG will soon have to seek external funding, either through a flotation or by offering a minority stake to

the company can grow simply by investing its profits in innovation. The innovation cycles have become too short and now we need new capi-tal. I have no doubt that Software AG cannot stay

The NCR Scalable Data Warehouse.

The list of potential partners is long. One obvious candidate is SAP, which has a similar culture, and activities that dovetail well with those of Software AG. Another possible suitor is Microsoft. Software AG is converting Microsoft's object technology, called Distributed Component Object Model, to run on mainframes and the fruits of this collaboration, predicted for next year, will take Microsoft into

new territory. "Microsoft knows the consumer market is not 'everything' and they obviously want to get into the very lucrative market for enter-prise computing," says MrSchnell. The prospect of the company he started 27 external shareholders does not disturb him.

"It is a major change, ous for rapid change and given the history of the company, but we have to adapt to the needs of the real

AG is currently going was originally developed for Schnell's fortune in the early through a rough patch and mainframes but its latest days, but he says the prodreported a net loss of DM50m for 1995. It is in the middle of a restructuring programme which includes abandoning non-strategic activities and refocusing on a smaller number of lines of business. It hopes to be profitable again in 1997, but to achieve this it has to save DM100m in the

next two years. blow for Mr Schnell who is increasingly worrled about the social consequences of the information revolution. "Using IT to slash costs is

a real time-bomb and we

cannot act as if nothing has

happened," he says. Last June, the topic was explored in Software AG's annual symposium, which had as its theme "Information Technology with a Human Face". Software AG is best known for its Adabas datahase and the Natural fourth generation language. These

pany successful and indepen-

dent in an industry notori-

Software AG has more than 5.000 customers in more than80 countries. Adabas

incarnation, Adabas D, works on many types of PC and server platforms. It can be used with standard relational databases from vendors such as Oracle, Sybase and informix, though Mr Schnell clearly believes Adabas is superior.

"The 'relational' approach was a function within Ada-Roughly 350 people will bas long before these other lose their jobs - a bitter companies were founded and companies were founded and Adabas includes other data models that you cannot do with a purely relational database," he says.

> he Adabas technology was recently enhanced to manage World Wide Web documents on a web server, and Mr Schnell sees a bright future for Software AG in the Internet age. However, he cautions against companies rushing into building intranets and distributed

> "Nearly all distributed projects fall to meet their price tag because the moment you distribute something, you get problems you never realised before. There is an extra dimension of complexity." he says. Adabas made Mr

of the company's revenues today. The new focus is on products that sit on top of databases and make data sations. These include prodncts to model data and extract it from existing databases, reporting and query tools to allow non-technical managers to access a database, and data warehousing products.

"Every other year the industry has to invent a new buzz word and 'data warehousing is the latest. The concept, however, is 100 per cent valid

"Data warehousing is completely different from the way computers were used in the past. Instead of automating business processes, you take existing data and create something out of it which for you - as a human being, is information.

Back in the 1960s, when Mr Schnell was working as a computer consultant in Darmstadt, his clients were struggling to make sense of the data on their main-frames. "I did projects for large companies and found they were constantly trying

Exploiting his background in mathematics research, he set out to build a database that would answer these cries for help...and so started Software AG.

It has taken 30 years, but Mr Schnell believes the data warehouse could finally crack the problem of turning unintelligible data into use ful information, thanks to the recent arrival of relatively inexpensive processing power that makes the data warehousing concept affordable for business

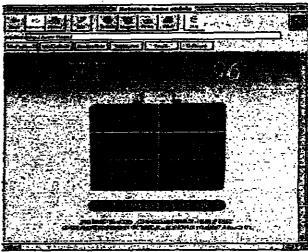

The data warehousing market is predicted to be worth \$7bn in 1997, but is hotly contested. Software AG has strengthened its marketing muscle by poaching a director to oversee marketing and customer service from the US computing services giant EDS, and Mr

to re-invent the wheel," he tured company is more market-driven than it was in the past. He cites as an example Dmart, an easy-to-use "data mart" product unveiled small data warehouses tailored to a specific group of users or applications, such as marketing or customerinformation systems.

commerzb.in

According to Mr Schnell. marketing is of paramount importance to IT companies and he cites Software AG and SAP as examples of European companies successfully competing with higger US companies.

He wishes there were more examples to cite, however. "European firms have a tendency to invent things and not understand how to make a product out of it. But in the US, there is more emphasis on marketing, which speeds up the testing of new ideas. In Europe, we more or

household – gave Map<u>In</u>fo

more critical information to Mapinfo threw this data up in terms of a thematic map, showing hot and cold areas, depicted as red and

blue. "We used our gravity model to consolidate on the central areas of chosen populations within a given drive time," adds Weston adds.

None of this effort came

for usual PC software prices. According to Weston, Daewoo's annual budget for planning using data visualisation, in conjunction with geographic information systems, amounts to £60,000. He says, however: "It's money well spent - you have to rationalise that expense against the £60m we've spent on sites and also consider the financial conse-

quences if we put one site in the wrong place. "It's a minimal cost in terms of what's at stake." Weston notes that "specialist consultancies in the field can charge 230,000 per town to carry out this kind of analysis and we needed 40

or 50 towns studied". Including after-sales support operations, Daewoo has 176 premises that owe their address to data visualisation projects. From a standing start, it has cornered 1.8 per cent of the British car market, selling over 17,000 vehicles between January and September 1996, with a brand that no UK driver would have recognised two

A 'datamap' button on Microsoft's Excel spreadsheet designed to work with the Windows 95 operating system, now introduces users to a cutdown version of Mapinfo. Thus, data vis-ualisation is selling cars and seeping through outo the

### **Excitement** over Java

Continued from page 1:

ere few Java development tools available, Java developers had limited experience with the language and that development processes were experimental or undefined.

Sun's Lambert argues that most of these issues have since been resolved. He points out that there is now a wide range of development tools for Java and an estimated 200,000 Java developers - a number which is fast catching up with the 400,000

### 'An earthquake'

Indeed, some analysts, including Robin Bloor of the Bloor Research group, predict that Java is at the epicentre of a seismic shift in the global \$650bn computer industry which could pose a serious threat to Microsoft and Intel, the two industry powerhouses created by the explosion of the personal computer - "this earthquake will totally re-arrange the IT landscape, affecting all vendors of IT products and services as well as their cus-tomers," he says.

"Java will turn the World Wide Web into a vast network for client/server operation...because Java exe cutes anywhere: for the first time, software application development can take place separate from an operating system. This enables the internet, changes the client/ server paradigm and smashes the door open for the 'thin client' [i.e. a stripped-down PC - or an 'NC' - designed to work across a network)."

### IN BRIEF

### Commerzbank profits up 37%

Commerzbank, Germany's third biggest commercial bank, announced a rise of 37 per cent in operating profits for the first nine months to DM1.67bn (\$1.1bn). However, the result was below some analysts' expectations and represented a slowdown from the 48 per cent advance of the first half. Page 16

HK Telecom advances 12% at mid-term Hongkong Telecom announced a 12 per cent rise in net profits to HK\$5.39bn (\$697m) for the six months to the end of September. However, the company, a subsidiary of Cable and Wireless of the UK, lost 15 per cent of its international market share in the first half of the year, compared with the same period in 1995. Page 20

BP third-quarter profits up 9% British Petroleum reported third-quarter earnings in line with market expectations. Net profits for the quarter were up 9 per cent to £650m (\$1.05bn) on a replacement cost basis and before exceptional items. Net earnings for the first nine months of the year were a record £1.98bn. representing an 18 per cent rise from last year.

Gebe in Lloyds Chemists bid The battle for Lloyds Chemists intensified as Gene of Germany returned to the fray, bidding £650.6m in cash for the high street pharmaceuti cals chain. Page 22

Whitbread pre-tax profits up to £177m Whitbread reaped the rewards of heavy investment in pubs, restaurants and hotels and an upswing in brewing profits, reporting a 14 percent rise in interim pre-tax profits to £177.5m.

US demand surge buoys market for LPQ The booming market in liquefied petroleum gas has hit US petrochemicals producers hard. LPG contract prices from Saudi Arabia – the main supplier - were recently fixed at \$250 a tonne for both propane and butane, an increase of almost \$50 a tonne from the October price.

# Bertelsmann group may be reorganised

Move would allow more outside investment

By Frederick Stüdemann in Bonn

Bertelsmann, the German media group, is considering a corporate restructuring which would allow some of its units to be offered. Mr Mark Wössner, chairman, said the group was thinking about making its four main business units book publishing, printing, Gruner + Jahr. its magazine and newspaper subsidiary, and the television and entertainment division - into public companies under a holding

This would allow outside investors to take stakes - a marked change for Bertelsmann, which is predominantly owned by a foundation and the family of Mr Reinhard Mohn. formerly sole proprietor. An exception is Gruner + Jahr Premiere, the subscription where the Jahr family retains a minority stake.

Restructuring Bertelsmann, Surope's largest media group, would enable further large scale expansion, Mr Wössner

true of the television and entertainment unit, which would be the first candidate

This could happen within two or three years, with the other units following considerably later. "I don't see it hap-pening in the book and printing divisions or at Gruner + Jahr for 10 years," he said. · Since postponing its plans for digital pay-TV this year,

Bertelsmann had refocused its television activities on free TV, he added. "Free-TV is significantly bigger than pay-TV. Free-TV [in Germany] has a total volume in terms of advertising revenue and licence fees of DM15bn (\$9.9bn), pay-TV only DM500m." Mr Wössner said Bertelsmann remained committed to

channel in which it holds a 37.5 per cent stake. The channel has 1.35m subscribers, and is signing up some 10,000 a

said. This was particularly for eventually developing digital pay-TV, he said. But this would require the consent of rival Kirch Group, also a shareholder in Premiere. Kirch launched DF-1, its own digital

pay-TV service, this year.
Despite acrimonious exchanges and even courtroom battles, talks between the two continue. Bertelsmann would like to see both networks brought closer together. "My wish would be to see Premiere as a stand-alone network with two core areas - films and sport - and the rest of pay-TV covered by DF-1," Mr Wössner

Premiere yesterday confirmed the expansion of its live coverage of soccer matches The exclusive deal with the German football federation covers both digital and analogue broadcasting. It gives Premiere the right to screen two games a week until mid-

# Valeo future secured by sale of 27% stake

By David Owen in Paris and Robert Graham in Rome

The medium-term future of Valeo, one of the jewels of the French car industry, was settled yesterday in a deal valuing the parts maker at more than FFr23bn (\$4.5bn).

The controlling 27.4 per cent stake in the company held by Cerus, the French holding company of the Italian industrialist Mr Carlo De Benedetti, was sold to three separate buyers – principally Compagnie

Générale d'Industrie et de Par- L12,500bn to L4,500bn (\$3bn). The move is a big retrench-

ment in the business activities of Mr De Benedetti. Mr De Benedetti and his family held the Valeo stake via their holding companies.

been cut by two-thirds from say is within the bounds of lary of J.P. Morgan, CGIP's

ticipations, a French industrial excluding the family's 14 per holding company – for F330 a cent stake in Olivetti, the trou-share, or FFr6.33bu. cent stake in Olivetti, the troutechnology group which is not consolidated. An aide of Mr De Benedetti described the sale as

"a big sacrifice". Cerus will also benefit from French stake in Cerus. This in an extraordinary interim divi-turn was owned by Cir and dend of FFr10 a share, as well Cofide, the family-controlled as a possible additional FFr10 a share payment if Valeo's At one stroke, Cir-Cofide's 1997 net profits reach at least consolidated turnover has FFrl.45bn - a figure analysts

possibility. The company said this could take its overall receipts to FFr6.7bn.

The deal keeps Valeo, which has been a target of speculation for most of this year, firmly in French hands. CGIP, chaired by Mr Ernest-Antoine Seillière, will end up with 20.2 per cent. Caisse de Dépôts et Consignations, a French statecontrolled financial institution, will raise its 1.9 per cent stake to 5.4 per cent. J.P. Morgan GT Corporation, a subsid-

take a 3.6 per cent holding.

The deal was concluded at 19 times prospective earnings. Mr Seillière said he had "no doubt that in three years' time we will not even remember the price we paid. I would never have undertaken this operation if it had not been in the exclusive interest of my shareholders". However, he promised the deal would not be dilutive.

# Gengold backs down in mine contracts row

By Mark Ashurst in Johannesburg

South African mining house Gencor, has bowed to pressure from investors for an independent valuation of manent contracts between South African mining houses and individual

The controversial contracts have underpioned the world's largest gold industry since its inception.

cancel management contracts with the deep level mines.

of Gencor-controlled mines in Johannesburg, Mr Julian Baring, managing director of MAM, said: "The quicker South Africa comes into line, the quicker South African gold shares will be properly valued."

The system of management con-tracts for technical expertise provided by the country's biggest mining London-based Mercury Asset Man-agement led a shareholders' revolt houses is facing mounting criticism against Gengold's proposal to charge from investors, who claim they under-

individual mines R127.6m (\$28m) to mine efforts to contain rising costs at Shareholders in Gengold's Winkel-

5 per cent of the total capital spending of most South African gold mines, plus a fraction of a percentage point of annual turnover. Mr Baring has been the chief architect of their abolition.

Mr Tom Dale, Gengold managing director, said the decision to cancel the contracts was "what shareholders are demanding". Gengold did not need shareholders' approval to cancel the contracts but had voluntarily sought their support, he said.

haak and Leslie mines yesterday voted nent contracts absorb about to reject the R126.7m charge to cancel the existing management contracts. Mercury has a 26 per cent stake in them. Gengold, the largest shareholder, abstained

Rand Merchant Bank and UAL, the merchant banks which carried out the valuations, defended the charge. They said the contracts were worth R17m a year over ten years, adding that the one-off payout was tax deductible and would cost the mines only R63m after

### **BA** joint bid for French carrier approved

By Ross Tieman and Michael nker in London and David Owen in Paris

British Airways yesterday won its battle to take over Air Liberté, the independent French carrier, with the Rivaud bank-

The commercial tribunal in Creteil accepted BA's plan to invest FFr440m (\$86m) in the airline for a 67 per cent stake. Rivaud will provide FFr190m. Mr Marc Rochet, chairman

of TAT European Airlines, BA's existing French subsidiary, will run Air Liberté. BA. said the two airlines would be kept separate "for the time

being". Attention in France will now switch to AOM, another domestic airline, owned by Crédit Lyonnais, the bank.

The state-owned Consortium de Réalisation, charged with selling Crédit Lyonnais' assets, is expected to sell the airline before further liberalisation of

air travel in the spring. Air France hinted last month it might eventually bid, although European Commission conditions attached to a FFr20bn aid package will probably rule this out until next

BA yesterday reported its first fall in first-half operating profits since the Gulf War five years ago, blaming higher fuel prices and the impact of a threatened pilots' strike.

Operating profits at the UK's leading airline slipped by 2.1 per cent to £512m. But a £26m contribution from Quantas in Australia and a £17m dividend from USAir helped lift pre-tax profits for the six months to September 30 9.3 per cent to £470m. This was in line with expectations.

However, slower-than-expected passenger growth contrib-uted to analysts paring fullyear forecasts; UBS, house broker, reduced expected pre-tax profits by £30m (\$49m) to

The figures were aided by a £21m reduction in interest charges, as gearing eased to

54.7 per cent Although further fuel price rises were expected, Sir Colin

said, the economic outlook for BA's main countries of operation remained encouraging.

He added that the airline planned to cut costs by \$1bn in the months ahead.

## Growth investors who came in from the cold

27-29

always try to cheer themest research studies telling them just how correct their strategies are.

Whether their revived spirits will survive the publication of their 1996 performance numbers is, alas, another matter. share price data have recently been produced by Mike Lenhoff of the private client man-agers Capel-Cure Myers and also by Paul Walton of Gold-

man Sachs in London. In the US, James P. O'Shaughnessy's book What Works on Wall Street has been

All show that value-based stock selection strategies heavily outperform growth styles in the long run. Putting it the other way around, inves-tors have tended to overpay for glamour to a quite extraordinary degree. They have in the past, anyway, But right now it is the growth managers who are smiling.

These studies vary in their methodology. O'Shaughnessy has access to a longer run of consistent data than the UK investigators - 44 years against just over 20. The Walton results are affected by survivorship bias, because the same stocks are followed over the whole period. The US analysis may to a slight degree be distorted by the reverse effect - "look-ahead" bias - because

Troubled value companies, Walton excludes financials.
It is not clear how much the

subtle differences in the selves up by results reflect these variations or whether there are genuine contrasts between the US and UK markets.

According to Lenhoff, four value styles have worked almost equally well in the UK - low price to sales, low price to cashflow, low price to book value and low price to earn-Analyses of long-run UK ings. High dividend yield hare price data have recently works much less well. Curiously, Walton finds high yield to be the clear winner (along with small capitalisation). He does not rate the other value factors very highly at all.

> Low price to book, a very popular style in the US, is revealed to be volatile

As for Wall Street, low price to sales emerges as the clear winner. The inverse growth strategy, high price to sales. has worked only very rarely, in speculative bull markets such as that of 1967. High dividend yield, says O'Shaughnessy, only outperforms with big, well-capitalised stocks: for smallcans it is in fact a negative indicator.

Low price to book, a very popular style in the US, is revealed to be volatile. It performed very well in the 1980s new, successful companies but high price to book was suc-have entered the database. cessful in the 1950s and 1960s, fund managers time is a lux-Lenhoff looks only at larger and chasing book value has ury indeed.

Perhaps O'Shaughnessy's most surprising statistic is the poor return from so-called growth stocks. A portfolio invested in 1951 in the 50 stocks with the highest p/e ratios, and rebalanced annually until 1994, would have underperformed overall by 4 per cent a year, and was vol-

However, Lenhoff suggests that high price to earnings may not in practice be a good proxy for high long-term earnings growth. There may be a lot of short-term cyclical recovery stocks mixed in. Walton's contribution here is that high p/e works over one year but not over three, which again suggests that the market is poor at predicting earnings growth over the longer term.

Incidentally, Walton is par-ticularly dismissive of low price to book as a factor in the UK market. There is presumably a methodological difference from the Lenhoff study. which finds that this style works, albeit with big swings over time. The same applies to low price to sales, which hugely outperformed between 1982 and 1988 but has often lost money, relatively, at other periods.

So much for history. In the UK, the FTSE 350 Higher Yield Index has underperformed its Lower Yield twin by 8 per cent in 1996 so far. The average UK equity income sector unit trust has underperformed its growth sector counterpart by 5 per cent over the past 12 months. Time may extend its healing

# SE-Banken advances to SKr4.4bn

By Hugh Carnegy in Stockholm

Skandinaviska Enskilda Banken, one of Sweden's leading banks, more than doubled profits in the nine months to end September as it sharply cut loan losses and underlying operations mostly performed strongly. Operating profits rose from SKr2bn in the same

period last year to SKr4.4bn (\$666m) near the top end of analysts' expectations. Earnings per share jumped from SKr3.16 to SKr6.33. The result followed solid

earnings growth reported losses in the first nine last week by Svenska Han-months fell to 0.65 per cent

delsbanken, SE-Banken's tra- of its total loan portfolio - a trading and corporate ditional rival, and cheered return to "normal" levels rose SKr1.50 to close at the early 1990s. SKr57 and the banking index rose more than 1.25 per cent on the day.

The biggest single factor in the profits rise was a 66 per cent fall in loan loss provisions, from SKr3.63bn at the same stage last year to SKr1.23bn. The fall reflected the heavy loan loss suffered last year linked to the failed financial services group. Luxonen.

after the credit loss crisis of

Profits before loan losses on the Stockholm bourse slipped slightly from SKr5.67bn to SKr5.65bn. But net interest income rose 10 per cent to SKr5.44bn. mainly because falling interest rates produced an increased yield on the bank's bond portfolio and lower costs of financing problem assets. Mr Bjórn Svedberg. chief executive, added that there were indications of a break in a long trend of nar-The bank said lending rowing margins between lending and deposit rates.

finance operations - one of SE-Banken's traditional strengths - led to an 11 per cent rise in net commission income, to SKr8.43bn.

A less positive development was an 8 per cent rise in costs from SKr6.95bn to SKr7.47bn, including a 12 per cent rise in staff costs. Mr Svedberg said a programme of technology investment the bank is spending heavily on preparations for European monetary union and the 'millennium problem'. which threatens the dating systems of business computers after the turn of the cen-Higher levels of equity tury - was largely to blame.

The bank's balance sheet was significantly affected by its spin-off in September to its shareholders of Diligentia, the company it had set up to manage the extensive property portfolio taken over during the credit loss crisis as security against bad

At the end of September. SE-Banken's capital base stood at SKr33.8bn, down from SKr36.1bn a year previously. The core capital ratio was reduced from 9.1 per cent to 7.1 per cent. The Diligentia spin-off also reduced the volume of assets taken over against bad loans from SKr15.3bn to SKr2bn.

### Talks may resolve future of Traub

A deal to create Europe's biggest machine tool company with annual sales of about DM1.3bn (\$859m) could emerge from talks between Traub and Gildemeister, two of Germany's largest machine tool compa-

However, the move could be scuppered by separate discussions in which Cincinnati Milacron, the large US industrial equipment maker. has expressed interest in acquiring all or part of Traub.

The talks have been sparked by severe financial problems at Traub, which has entered into the early stages of administration after running up debts esti-DM300n

Tranh said yesterday it was optimistic. "There will definitely be a solution," it

If either of the plans goes ahead, the resulting company could play a pivotal role in the reshaping of the DM12bn-a-year German nachine tool industry.

Germany's is the biggest tool sector in Europe, but it has been financially stretched for the past five years as a result of high labour and plant costs and stiffer international compe-

A deal between Traub and Cincinnati, the US's fourth-biggest machine tool producer, would provide Cincinnati with a long-sought selling and production arm for machine tools in continental Europe. The company last year had revenues of \$1.6bn, of which a quarter was from

machine tools. Agreements over Traub's future are tied to discussions over debt repayment by the 14 banks, led by Deutsche Bank, which until last week were owed DM230m by Traub.

It is thought that for any deal to proceed, the banks will have to write off a substantial part of the money they are owed by Tranh, on top of the DM100m they have already agreed to waive in the past week. As a result of discussions

concerning Traub's status of provisional administration, which it entered into last month, the banks have agreed in principle to reduce the company's debt liability to DM180m. Mr Olaf Tölke, an analyst

at Merrill Lynch, the US most likely outcome was an all-German solution to Traub's problems, involving an alliance between Gildemeister and Traub. However, such a venture

would almost certainly require the agreement of the German cartel office. Gildemeister, with annual sales of DM740m, is Germany's second-biggest tool company, while Traub, with annual sales of DM560m, is the fourth biggest.

A link with Gildemeister would not be a soft option for Traub. Gildemeister is also heavily in debt and fac-ing competition from lowcost machine tool suppliers, especially from the Far East. In another development. Heckert, a Traub subsidiary based in Chemnitz, eastern Germany, last week went into receivership as a result. of its financial problems. Niles and Heller, two German machine tool compa nies, are both interested in EUROPEAN NEWS DIGEST

### Marchionne chief at Alusuisse-Lonza

Mr Sergio Marchionne, a 44-year-old Canadian, has been named as the next chief executive of Alusuisse-Lonza, the Swiss industrial conglomerate. Mr Marchionne joined Alusuisse in 1994 after its \$555m acquisition of Lawson Mardon, the Toronto-based international packaging

His rise to the top of the Swiss company, which employs 31,000 people and has an annual turnover of SF17.5bn (\$5.9bn), has been helped by the departure over the past two years of two potential rivals. Mr Marchionne took over as Alusuisse chief financial officer in January 1995 after Mr Georges Schorderet moved to be Swissair chief financial officer, and in August 1995 Mrs Dominique Damon, Alusuisse deputy chief executive, left the

Analysts welcomed Mr Marchionne's appointment. saying it reflected the company's growing international stature. He will take over in April 1997 when Mr Theodor Tschopp, 59, replaces Mr Hans Jucker, 69, who is retiring as chairman. Mr Marchionne's role as chief financial officer is being taken by Mr Urs Fischer, 42, who joined Alusuisse-Lonza in 1987 as a financial analyst. Mr Peter Kalantzis, 51, head of the group's chemicals business, is moving to the newly created post of head of corporate development and will be chairman of Lonza.

William Hall, Zurich.

### Spain starts sell-off drive

A much-heralded privatisation drive by Spain's centre-right government has got under way with an agreement to sell a loss-making mining company in the south-western Huelva region to Navan Resources of Ireland. The Irish company said it would pay \$3.43m for Minas de Almagrera, as well as assuming \$5.3m of the company's debt, under an agreement with the Spanish industry ministry's Sepi portfolio unit. Sepi said the sale was the only means of salvation for Almagrera, which mines copper, lead and zinc. The company's modern metallurgical complex would be used to process ore from Navan's own operations at nearby Aguas Tenidas. allowing considerable cost reductions, it said. Almagrera posted a loss of Pta600m (\$4.7m) in 1995 on turnover of Pta4.7bn. It has losses in the past four years of more than David White, Modrid

Wedel Inc.

future grass

### KPN raises TNT stakes

KPN, the Dutch postal and telecoms group which is mounting a A\$2bn (US\$1.57bn) friendly bid for Australia's TNT, yesterday announced that it had acquired a further 2.3 per cent of its target's ordinary shares, and another 3.7 per cent of the converting preference shares. This takes KPN's stake in the transportation group to 19.6 per cent of Nikki Toit, Sudney

### VW expects strong year

Volkswagen, the German automotive group, said it expected clearly higher earnings in 1996 compared with a net profit of DM336m (\$222m) in 1995. But the company reiterated that it was not satisfied with the current return on sales. The shares closed up DM2.25 at DM615.50. VW posted net profit in the first nine months of DM465m, up from DM185m a year earlier. VW attributed the earnings growth to the success of the parent company, its Audi unit, its Brazilian subsidiaries, success in the Asian-Pacific region and at its financing and financial services division. Losses at its Seat unit and in North America had declined from year-ago levels.

Cash flow in the nine-month period including leasing activities, rose 8.9 per cent, from DM6.91bn to DM7.52bn. Excluding leasing, it climbed 6.5 per cent to DM4.60bn. Fixed-asset investment in the period stood at DM5bn up

### Adecco shrugs off French fall

Adecco, Europe's largest tamporary employment concern, suffered a 4 per cent drop in the third-quarter revenues of its French business, which accounts for almost half the group total. However, a strong performance in North erica and the Asia-Pacific region offset the downturn in its most important market and enabled it to increas group revenues in the third quarter by 6.7 per cent, to SFr2.36bn (\$1.86m).

Adecco was formed this year by the merger of Adia, the world's third biggest temporary employment agency, and Ecco, the market leader in France. The group said that in the third quarter the temporary staffing market in France fell 7 per cent, so the 4 per cent rise in Adecco's French revenues indicated it was gaining market share. Apart from France, revenues in the rest of Europe rose 23 per cent in the latest quarter, to SFr595m. The only other weak spot in Europe was Germany, where revenues fell 4 per cent. Mr John Bowmer, Adecco chief executive, said he was pleased with the new group's top-line growth, given the tough economic environment in France, Germany and Switzerland. William Holl

### Sol Melia earnings up 35%

Sol Melia, the recently floated leisure group, posted net profits after minorities up 35 per cent, from Pta2.35bn to Pta3.17bn (\$24.9m) for the first nine months to September 30. Pre-tax profits rose from Pta3.39bn to Pta4.49bn on sales up from Pta6.66bn to Pta7.95bn. Sol Melia said profit from ordinary operations climbed 27.1 per cent in the nine months to September 30, from Pta3.5bn to 4.48bn. Operating cash flow rose 20.6 per cent, from Pta3.62bn to Pta4.37bn.

Comments and press releases about international companies coverage can be sent by e-mail to international.companies@ft.com.

# Commerzbank suffers setback in growth rate

Commerzbank, Germany's third biggest commercial a rise of 37 per cent in operating profits for the first nine months to DM1.67bn (\$1.1bn), helped by a sharp rise in net interest income and the favourable impact of commission business.

below some analysts' expectations and represented a slowdown from the 48 per cent advance of the first

on the debate over possible restructuring in Germany. We are not buying anyone, nor do we see the likelihood that anyone will buy us. he said, noting that the bank's market capitalisation was around DM15bn. But he expected a further concentration in public sector bank-

Commerzbank said its pretax profit - virtually the same as the operating result, However, the result was since extraordinary items were minimal - was 49 per cent higher than in the same period of last year. Assuming a 40 per cent tax rate, net income would be around

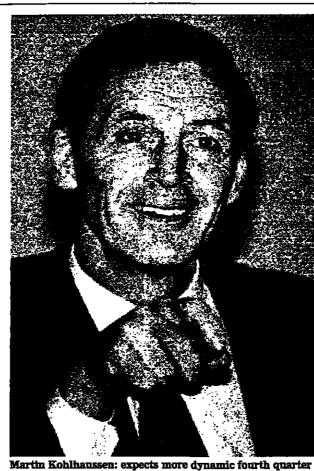

This would be equivalent Mr Martin Kohlhaussen, to a post-tax return on equity of just over 11 per cent, or nearly 19 per cent before tax. The bank has set itself a target of 15 per cent after tax in 2000. Mr Kohlincome ratio had fallen from also repeated the 69 per cent a year ago to 64 bank's determination to stay per cent. "but we still have independent in a comment further to go". Costs were 7

in the first nine months, a slight slowdown from last

Net interest income was 13 per cent higher at DM4.4bn, reflecting a positive trend in treasury business, a rise in total lending and the broader capital base. The interest rate margin was down from 1.47 per cent last year to 1.39 per cent, where it has stabilised in the second half.

Fee income, helped by increased securities commissions (up nearly 40 per cent to DM685m), was 19 per cent higher at DM1.7bn.

Own-account trading activities produced a gain of 11 per cent to DM402m. of which DM104m came from foreign exchange dealings, DM232m from interest-based futures and DM66m from securities trading. Mr Kohlhaussen expected an improved proprietary trading result in the fourth quarter as unrealised gains were

### COMPANIES AND FINANCE: EUROPE

# Why Weinberg prefers autonomous energy to ersatz synergy

Pinault Printemps chief aims to overcome flat consumer spending with overseas expansion and bright ideas, writes Andrew Jack

able view of his role as head of Pinault Printemps Redoute, the sprawling French retail group. He has little faith in the importance of creating synergies between the companies he controls, preferring to

encourage their autonomy. Although he concedes that some activities - such as purchasing and information technology - may be best conducted centrally, he says that he prefers his different businesses to develop links with each other voluntarily and in response to their

"Synergy is the cherry on the cake," he says. "It is for-midable when it is the result of people working on the ground. It makes no sense if it comes from an artificially reated structure. Our quality as a group is to break down bureaucracy, delegate responsibility and encourage ntrepreneurship."

It is a message worth hearing from someone who, since he took over the group in February 1995, has steadily edged up sales to FFr38bn (\$7.42bn) and substantially ncreased net profits FFr748m for the first six

ing his group. All this has been achieved at a time of general gloom in the French retail sector. It has suffered from sluggish consumer spending, the aftermath of the terrorist attacks and strikes that hit the country at the end of last year. Moreover, new measures designed to protect small shopkeepers, by clamping down on new developments, notably in the suburbs, have been at the

"We operate in an extremely complex mix of different markets," Mr Weinberg says. "Retailing must be close to our customers dox is that our role at the group level must be to encourage autonomy in our operating businesse He has taken a number of

expense of larger rivals.

initiatives to put his principle into practice. Executives in the different businesses have created informal networks to exchange ideas on computing and marketing. One result is the first mail order catalogue by Fnac, the group's books and records chain, inspired by the operations of its Redoute telephone sales company. He has also recently cre-

conjunction with a banking partner, with initial capital of FFr25m. Funds can be lent to support new ideas.

those outside the group.

Another example: after deciding that there was a one of its existing retail group is launching a new niche to be exploited in the

whether from employees or sale of top-of-the-range linge-

report directly to the holding company.

The PPR chairman says: "You can't go on making eternal productivity gains with a fixed cost structure." His attempt to foster creativbelief that France will continue experiencing low eco-

"I am struck by the numwaiting for economic recovery," he says. "I don't think there will be a strong upturn." He adds that he loses nothing by developing his strategy in the absence of any salvation which would be bought by a surge in consumer spending.

Within France, he is nevertheless placing emphasis on increasing productivity, as well as improving stock management. He also highlights the important and fast growing scope for consumer credit cards in PPR stores, which provide a wealth of information on customer habits which can be used for marketing.

They are also extremely profitable, accounting for a substantial part of the FFr293m first-half profits from its involvement in nonoperating businesses such as

in France this month which Finaref, which deals with credit purchases for customers of Redoute.

Regarding the government's clampdown on new shops, Mr Weinberg says the way the country's suburbs have been defaced by comity is one reaction, given his mercial development in the last few years is "disgraceful", but argues the real serve the activity in town ber of people who are centres. That requires, not a ban on new building elsewhere, but rather a combination of changes to property law, taxes, housing and planning law designed to make the centres more attractive.

Given the difficulties of the domestic market, Mr Weinberg also stresses the need for further international diversification of the group. He says this has been the focus of all group expansion, including the acquisition of full ownership of the Fnac store in Belgium and new stores in Madrid and the pharmaceutical products distributor, in Africa and Rexel, the low voltage electrical equipment retailer, in

By 2000, his objective is to generate 40 per cent of sales outside France, compared with only 28 per cent today.

# L'ORÉAL

The L'ORÉAL Group's consolidated sales for the first nine months of 1996 rose to FF 44.58 billion. Growth compared with the same period in 1995 was 12.1 % on published figures and 7.8 % on a comparable basis, excluding the impact of movements in group structure and exchange rates.

The Group's interim consolidated sales showed an increase of 11.7 % on published figures and 7.7 % on a comparable basis.

The difference between published figures and the increase on a comparable basis is primarily a result of the consolidation of Maybelline, Jade and Interbeauty (Israel) for the first time in

Operating profit for the six months ended 30 June 1996 increased by 14.9 % to FF 3.435 billion.

After interest expenses resulting from the acquisitions made by the group, 1996 interim profit on ordinary activities before taxation, employee profit sharing and capital gains and losses

Sales for the full year 1996 should enjoy growth close to the increase recorded for the first nine months of the year. Growth in profit on ordinary activities before taxation, employee profit sharing and capital gains and losses should equal the rise in sales after allowing for the increase in the Group's interest

1996 net profit before capital gains and losses after minority interests should advance more strongly than in 1995, despite the increase in taxation and the portion paid to minority interests.

RESULTS OF ELECTION TO RECEIVE A FINAL DIVIDEND INSTEAD OF THE CAPITALISATION AWARD AND AN ELECTION TO SUBSCRIBE FOR NEW SHARES

The right of election to receive a final dividend instead of an award of capitalisation shares ("the Capitalisation Award") and the right of election by those shareholders electing the dividend to apply the dividend in subscribing for new JCI shares ("the Subscription") made to ordinary shareholders registered at the close of business on Friday. 27 September 1996 ("the Record Date"), closed at 16h00 on Friday, I November 1996. The weighted average traded price of JCI ordinary shares on the Johannesburg Stock Exchange on Thursday, 31 October 1996 was R48.31837. Accordingly, the Capitalisation Award and the Subscription for new shares was determined as a ratio of 1.158979 new shares for each 100 shares held on the Record Date.

Elections to receive the final dividend of 53 cents per share in respect of the year ended 30 June 1996 instead of the Capitalisation Award were received in respect of 100,647,221 shares. Accordingly, a final dividend of 53 cents per share was declared on 5 November 1996 on 100,647,221 ordinary shares in respect of the year ended 30 June 1996. Elections to apply this dividend in subscribing for new shares in JCI were received in respect of 61,633,539 of these shares. An amount of R32,665,775 was therefore applied in terms of the Subscription. Accordingly, 1,298.215 new fully paid JCI ordinary shares of 0.000671579 cents each have been allotted in terms of the Capitalisation Award and the Subscription and the issued share capital of JCI has been increased to 152,371,986 ordinary shares.

The listing of 1.298,215 new ordinary shares in JCI will commence on the Johannesburg Stock Exchange from the commencement of business on Wednesday, 6 November 1996.

Cheques in respect of the final dividend and shares sold for the benefit of shareholders, as well as share certificates, will be posted to shareholders on or about Wednesday, 6 November 1996.

6 November 1996

### **KPMG** revenues rise 8% in year

By Jim Kelly, **Accountancy Correspondent** 

KPMG, one of the Big Six global accountancy groups. reported an 8 per cent rise in worldwide revenues for the year to September 30, from \$7.5bn the previous year to \$8.1bm.

The growth rate was seen as mildly disappointing. "We have got to be growing faster." said Mr Jon Madonna, KPMG chairman. "I was hoping to see better but it is acceptable."

The firm had invested "hundreds of millions" of nology and developing new products for clients, he said. This included about \$500m a year on technology and more than \$100m on products. As a result the firm was looking to improve growth over the next year.

Andersen Worldwide, the umbrella organisation for Arthur Audersen and Andersen Consulting, has led the results announced to date far this year, with revenue growth at 16 per cent in

1996 to \$9.4bn. Mr Madonna said he saw further consolidation among the big accountancy firms. but said KPMG would grow mainly from within rather than through acquisitions.

He said all sides of the business had performed well over the year, but stressed that significant growth in revenues was likely to come from the consulting side of the business rather than the traditional backbone of auditing and tax.

"If you look at where the great opportunity is, it's on the consultin Madonna said.

The investment and stra tegic moves KPMG had made had ensured it would be in a strong position for the future. "The road we are on is the right road." he

# Mergers and acquisitions activity reaches new high

By John Authers in New York

accountancy firm.

International cross-border mergers and acquisitions bad already reached record levels for the year before the proposed merger between British Telecommunications and MCI, according to a survey published yesterday by KPMG Peat Marwick, the

In the first nine months of the year, purchasers spent \$181.7bn on acquisition tar-gets whose parent companies were based in a different country. Activity picked up substantially in the third quarter, with the total volume of business by the end of June having been 6 per cent below its level for the

first six months of 1995. The previous record for the first nine months of the year, set in 1995, was \$173.7bn. It means that global cross-border mergers and acquisitions activity is now double its level for the same period of 1992, when the total volume of business was \$90.1bn.

However, the total number of deals dropped significantly, from 4,536 to 4,016, with buyers concentrating on large targets.

Mr Steve Blum, a corporate finance partner with KPMG, said conditions for cross-border deals had never been better. "Low worldwide interest rates and lofty global stock markets, which lower financing hurdles, together with bealthy economic conditions in most of the developed world, helped to fuel deals," he said.

October IPOs top 1993 record

The number of initial public \$41bn, according to Securiofferings (IPOs) in a single month hit a record in Octo-ber, according to the latest numbers released by Securities Data, Tracy Corrigan A total of 106 companies

issued public equity for the first time last month, breaking the previous record of 100 set in November 1993. That figure includes all new issues in the US, including closed-end funds and real estate investment trusts. In terms of money raised, last month's \$6.3bn proceeds

fell short of record levels. About a third of companies going public in October were classified as high-tech. So far this year, 700 companies have gone public in the US market, raising

However. KPMG also \$1.6bn to buy AIM, a prifound that acquirers were becoming more selective, with sharp slowdowns in transactions targeting China and India. This was part of a "flight to safety" with companies finding less incentive to take the risk of investing in emerging nations in a search for higher returns.

The greatest volume of mergers and acquisitions activity was between the US and the UK. UK companies invested \$11.42bn in US companies during the first nine months, in 134 separate deals. Since then, the US has seen both the BT deal and the agreement by Invesco, a UK fund manager, to pay the region.

ties Data. If activity continues apace, the IPO market is on track to beat the 1993

record this year. The Securities Industry Association expects that 1996 will set records for equities underwriting and trading in the US market. "Many people thought 1993 was a unique year, and one the industry would have difficulty matching," said Mr Jeffrey Schaefer, SIA senior vice-president for economic research. "This year's strong equity market has made it more conducive for firms to raise equity capital rather than debt to finance expansion," he said. The cli-

mate has also been helped by heavy inflows into equity

vately held US money man-This was almost exactly reciprocated by US companies which invested \$11.67bn in the UK, significantly more than last year's \$9.16bn.

mutual funds.

There was also a sharp increase in US activity in Latin America. US companies invested \$2.4bn in Venezuela alone (up from \$31m). while the region as a whole attracted investment of \$10.04bn, 59 per cent higher than in the equivalent period of 1995.

This was almost back to the peak of 1994, when 210 deals brought \$11.12bn into

# NatWest to buy out Newcrest puts rejection behind it Wheelock venture

By Louise Lucas in Hong Kong

National Westminster Bank of the UK is to buy out Wheelock, the Hong Kong conglomerate, from its Hong Kong investment banking joint venture after just two years in partnership.

NatWest said it aimed to step up Wheelock NatWest's activities in trading equities and equity derivatives, but these more risk-oriented businesses would need more capital and tighter regulation. That could be more easily handled in a wholly owned vehicle, where one entity has full control, the hank said.

Mr John Howland-Jackson, Asia Pacific chairman of NatWest Markets, said tightened regulation had made the split inevitable: the bank is regulated by the Bank of England while Wheelock is

unregulated. significant business (in secu-rities and especially derivatives trading), a perception that there could be greater difficulty in controlling all venture, if you do not own it

the Wheelock arm responsi- it's because they are much ble for the joint venture, said more amicable between of the split: "It's not the best option (for us), but it was really the only option. The

only sensible option." But Hong Kong analysts, pointing to Wheelock's hapless record with partners, reckon the split may have been forced by a falling out. NatWest has been building

up its other investment banking activities in Asia, with a recent expansion of its equities business in Tokyo, and admitted that it had "outgrown" the partnership with Wheelock.

Wheelock prides itself on its role as a "bridge between East and West". The investment banking venture was its most high profile tie-up.

Its remaining venture. with Foster's, the Australian brewery, in China, was initially capitalised at US\$28m. A retailing joint venture with Virgin, the UK aviation "There is, as you build a and entertainment group, never got off the ground.

One broker said that the Wheelock group is generally held in poor regard in Hong Kong. "You only need look those risks if you are a joint at the Hong Kong airport railway projects; no-one is Mr Nick Sibley, managing affiliate Wharf. All the other director of Wheelock Capital, developers are in consortia - in 1995.

The joint venture had already absorbed an investment of US\$125m from the two shareholders.

Neither side would disclose the payment being made by the NatWest group, which will appear in Wheelock's accounts as an exceptional item next year, The investment manage-

ment side of Wheelock Nat-West, whose purpose came into question after Nat-West's acquisition of the Gartmore fund management group, was shut down last

NatWest Markets, the global corporate and investment banking arm of Nat-West Bank and Wheelock's erstwhile partner in the pan-Asian joint venture, is expec ted to complete the acquisition of Wheelock's 50 per cent stake by the end of the month pending approval from the two partners'

Wheelock NatWest, which formally opened its doors in the second half of last year, expects to become profitable next year. It was independently ranked fifth in Hong

> Newcrest's timing, however, was far from perfect. Mr de Crespigny was already putting together a merger of his own, drawing his complex mining interests

Glittering future Million ounces Cadle HIE/Cadle East

Spurned by Normandy, the gold miner is looking to exploit its exploration skills

into one organisation under the Normandy banner. Newcrest stepped in at the last moment and sank that deal in the hope that it could push forward its own merger what we were trying to proposals. It was able to halt the Nor-

mandy group merger because it had acquired a 14.9 per cent stake in Normandy and 10.5 per cent of Mr de Crespigny's Poseidon Gold (PosGold), mostly from Minorco, an offshoot of the Anglo American-De Beers group of South Africa For Newcrest, the idea of a

mandy merger with the

uncertainty of the one we

Mr de Crespigny completed his merger at the sec-ond attempt and Newcrest was left with a big loss more than A\$100m at pres ent values - on the A\$470m

"Now," says Mr Quinn, "we have to do a job of conveying to the investment community that Normandy was not the whole story. We need to refocus investors on what our future will be."

The present jewel in Newcrest's crown is the Telfer gold mine, in Western Australia. Telfer produced 365,000 troy ounces of gold in the year to end-June, and this is scheduled to rise to nearly 600,000 ounces in the

next three years. Mr Quinn is also excited by Newcrest's two development projects: Cadia Hill in New South Wales, and Goso wong, in Indonesia.

Cadia, due to start up by August 1998, has a resource so far of 7.2m ounces of gold and 556,000 tonnes of copper. Annual output of 293.000 ounces of gold and 24,000 tonnes of copper is expected.

osowong is much Jemaller, but is important as Newcrest's first project outside Australia. For capital expenditure of about A\$70m, Newcrest sees Gosowong producing 150,000 ounces of gold a year, possibly from the mid-

Newcrest will be producing about 1.2m ounces of gold by 2000, says Mr Quinn. Last financial year its output was 582,000 ounces, down from 649,000 in the previous

In future, says Mr Quinn, Newcrest will rely principally on exploration skills, rather than acquisitions, to generate growth. "Certainly some intercational investors prefer large, liquid gold stocks. But there are other criteria, such as growth in production. And we offer that by going from 600,000 ounces a year to 1.2m ounces in two years' time."

GLOBAL BOND ISSUES Philippine Long Distance Telephone Company \$500,000,000 1994 Service Nutres due 2004 1995 Senior Notes due 2002

1995 Senior Notes due 2005

**≜** Bankers Trust

In a culture that prizes innovation, the biggest challenges become the greatest opportunities. Philippine Long Distance Telephone Company's desire to bring state-of-the-art technological innovations to its service area was met by a seemingly impassable obstacle: the challenge of raising large-scale capital in market conditions that had turned skittish towards all developing nations. Together, we designed a first-of-its-kind creative solution. Based on substantive knowledge of the industry, local and global insights about the region,

and the resources and credibility of our full-service worldwide network, we structured the first ever Global Bond offering by a Philippine issuer, and the first such registered with the SEC in the U.S. Then we worked collaboratively with PLDT to effectively market this breakthrough offering. Based on this initial achievement, we successfully marketed their two-tranche bond the following year. The ingenuity displayed by both partners throughout this relationship so impressed the financial community that we were awarded "Deal of the Year" by two publications: Corporate Finance, for two years running, and Asiamoney. We welcome the opportunity to discuss how we can develop equally innovative solutions to your financial challenges.

# Move to new technology hurts Nintendo

By Michiyo Nakamoto in Tokyo

Nintendo, the Japanese maker of video games, yesterday unveiled a half fell slightly, from Y135.2bn a 53 per cent drop in parent recurring profits in the first half, as users shunned the last generation of Super Nintendo games machines and sales of software plummetted.

The company said that the drop in its 16-bit Super Nintendo sales was in line with expectations, amid the transition to next-generation technology, which has been brought to the market in the form of Nintendo 64, an advanced 64-bit games machine.

setback

Energy

at Japan

By Gwen Robinson in Tokyo

Japan Energy, a leading

mining development and

petroleum refining group,

announced a 23.5 per cent

the half-year to September. The company said the fall

was due to increased price

competition following

sweeping deregulation of Japan's petroleum industry.

Although overall sales

rose by 9.5 per cent to

Y691.42bn, rising crude oil prices and a deterioration in

the profitability of the

petrochemicals division

wiped out some Y12bn in

profit. The rise in crude oil

prices is expected to reduce recurring profit by a further

Y3bn in the second half, the

Cost-cutting measures

worth some Y10bn and for-

eign exchange gains of

Yl.4bn failed to offset the first-half fall in recurring

profits. However, a surplus

of securities holdings helped

net profits soar by 61.5 per

cent to Y1.62bn, with earnings per share rising to

Y1.49 from Y0.92 a year

For the full business year,

company said.

Recurring profits dropped more than half, from Y63.9bn to Y30bn (\$263.6m), while sales for the first

year ago to Y130.2bn. Nintendo kept its full-year fore-cast more or less unchanged, at recurring profits of Y85bn and net profits of Y48bn. Sales, however, are now expected to be slightly higher than initially forecast, at Y340bn, because of an increase in production of the Nintendo 64. Nintendo said that the Super

Nintendo machines - known as ware had suffered from the transi-

of software for the 16-bit machines US, where the company sold plunged from 13.99m units in the first half last year to 5.2m.

The company had not been able to overcome the drop in Super Nintendo sales with higher sales of the Nintendo 64. Although the new machine has been popular - Nintendo sold 1.16m units in Japan and 800,000 units in the US - there have been few software titles to support greater shipments.

Nevertheless, Nintendo expects to ship a total of 6m of the 64-bit Super Famicon in Japan - and soft- games machines in the full year and 12.3m software units. Demand

tion to the advanced format. Sales has been extremely strong in the 400,000 machines in the first week of its launch.

The company is also likely to be supported by currency gains amid the yen's weakness against the US dollar, said Mr Hironobu Sawake, industry analyst at Nikko Research Center in Tokyo.

The number of software titles available for the Nintendo 64 is to rise to 10 in Japan by the end of the year and eight in the US. Nintendo is also looking to strong sales in Europe when the machines are launched there on March 1.

doubt, and when that happens they will be able to achieve firm profits," Mr Sawake said.

Mario Cart, a popular game that is available in the earlier format, is expected to be one of the upcoming titles that will support strong

demand, he notes. Nevertheless, Nintendo still face strong competition from Sony in particular. Among the competing advanced-generation video games machines, Sony's 32-bit PlayStation is proving to be the strongest seller yet in the Japanese market, according to Mr Sawake.

dynamic regional centre so long as it achieves a reason-

the economy.

## finance deal By Kenneth Gooding,

Star Mining, a small Australian listed company that has been struggling to develop Sukhoi Log in Siberia, Russia's biggest known gold deposit, hopes to enlist JCI, the South African mining group, to provide finance and expertise.

The companies have signed a Memorandum of Understanding which will provide the basis for JCI to buy up to 30 per cent of Sukhoi Log for US\$250m and

The deal is in line with JCI's policy of finding opportunities to generate production outside South Africa. Mr Bill Nairn, chief executive, said Sukhoi Log could be one of the world's leading gold producers into the

next century". Sukhoi Log has reserves and resources of 31m troy ounces of gold and four "satellite" deposits are estimated to contain 4.2m ounces. Star also has mining

rights to an area of 105,000 so km, about the size of England, in Russia's Irkutsk At present Star envisages

Sukhoi producing about 600,000 ounces a year in an initial phase, and eventually about 2m ounces. However, the capital cost of the first phase alone is likely to be about \$600m.

Under the terms of its agreement with the Russian

obliged to contribute \$200m over the next 18 months, to arrange for appropriate debt funding and guarantees sential for completion of the first phase.

If the JCI deal is sealed, all these conditions will be met and Star would get back the

\$50m it has spent so far. Star's share of Sukhoi Log could be reduced from 34.88 per cent to 4.88 per cent as a result of the arrangement but Mr Rudolph Agnew, Star chairman, said yesterday that negotiations were taking place with "various Russian parties" to increase substantially Star's interests in Sukhoi Log and a number of

the satellite deposits. The Russian state, with 38 per cent, and 9,600 employ-ees, with 17 per cent, are the other main shareholders.

Not the least of Star's difficulties has been the fact that Russia's Federal Security Service, successor to the KGB, refused the company access to critical data because gold reserves have always been a state secret.

Mr Victor Chernomyrdin. Russian prime minister, signed a decree removing the secrecy restrictions in

September. Mr Agnew said this made negotiations with JCI much easier. He said: "Although our agreement with JCI is subject to various approvals on both sides, I see it as an important step forward in our determination to bring the Sukhoi Log and other government, Star was also projects to development."

# First-half | Li lays foundations for second fortune

After the sale of Star TV, Pacific Century is turning towards financial services

biding his time, plotbiding his time, propreparing to pounce. The Hong Kong chairman of Pacific Century is steadily licence. laying the foundations of a second fortune with the booty from his first - the sale of Star TV, the Asian satellite broadcaster, to Mr decline in interim recurring profits to Y944m (\$8.3m) for Rupert Murdoch's News

It is a hard act to follow. Having built Star since its foundation in 1990, he sold it for just under US\$1bn, with the final tranche disposed of last year. It was a big deal for any businessman. But Mr Li was just 23 when Star was born. The question is, can he

do it again? Now aged 29, Mr Li appears to be taking a more measured approach. "More risk averse" is how he describes his strategy at Pacific Century, which he formed in 1993.

Gone are the glitzy businesses of television and telecoms. Instead he is building his new ambitions on property, financial services and

There is a change, too, in his style - once criticised as high-handed. "In the past yes, I was abrasive", he says. "But that was necessary in TV." In his new businesses, delegation is the preferred

But a lower profile of late points to preparation, not inaction. "He is a chip off the old block", says one mate made in August, associate, referring to Mr Li Ka-shing, Richard's father, who has risen from manufacturing plastic flowers to dominate much of the terriprices, said the company. tory's business. "Deal-The result, however, would making is in his genes", adds one local banker. And if the sectors in which he is now focused might appear staid after TV, they offer

More significant, the group has secured an alliance with China Insurance, through the sale of a 20 per cent stake in Top Glory's holding company to the

While Pacific Century's insurance ambitions in China are progressing, Top Glory has cemented its position in Hong Kong. "We are now the third largest in terms of premium sales", Mr Li says, citing incentives such as the sale of a 25 per cent stake in the insurance arm to management. "We are forcing them to upgrade the computer system. But they want a quicker break-even. I love that kind of fight".

In property and infrastructure, Pacific Century has invested across Asia, from India to Singapore and southern China. But in spite of his war-chest, and the fact that 90 per cent of the company remains in cash. Mr Li is wary.

"We bid for one of the subway projects, about US\$2.5bn", he says. "We lost and I don't regret it".

Mr Li's approach is based on number-crunching rather than the gut feel employed by many of the territory's property tycoons. And he thinks some of the numbers do not add up.

"There are still people chasing after values which I think are not justified in terms of fundamentals. I have a strong aversion to the rat race."

Such a strategy means that most of Pacific Century's earnings still come from interest income. But that will change. "In five years the main source will be an operating business that either we have started or he says.

Richard Li: 'The prospects in China are staggering'

invested in". Mr Li says, "I am going to add one or two

The Pacific Century chief these new legs might be, but says he is actively searching with the help of Gordon Capital, the Toronto-based investment bank where he worked until returning to Hong Kong in 1990, and

which he bought last year. Television still holds some appeal, but Mr Li argues the market is now much more competitive than when Star television. "We had it easy". says

next move will be in line with his broader strategy of Pacific Century – limited is guarded about where diversification in terms of sectors, broad diversification in terms of regional markets.

Mr Li dismisses the idea that Pacific Century's 'geographical spread, and the choice of Singapore for its sole listing, reflect concerns about Hong Kong's prospects after its return to Chinese sovereignty in July next year. "I don't believe China is so dogmatic that it will pioneered regional satellite kill the golden goose," he

His home territory, he

man of Cheung Kong, the flagship group of the elder The top job at Hutchison, says Richard, does not attract him - at least for the moment. "Maybe something

will change later on", he But for now it is clear where his priorities lie. Although he is deputy chairman of Hutchison, it is his own business that takes his energies. "I spend 90 per cent of my time at Pacific Century...I have an obliga-tion to build it up." The deals on the drawing board

John Ridding

## **HK Telecom** advances 12% in first six months

By John Ridding in Hong Kong

Telecom Hongkong yesterday announced a 12 per cent rise in net profits to HK\$5.39bn (US\$697m) for the six months to the end of September and called for greater freedom in setting

rates and prices. Mr Linus Cheung, chief executive, described the double-digit increase in the first half as "no mean feat" given the increased competition in Hong Kong's liberalised domestic market and the assault on its international direct-dial monopoly as well as Internet-related

New rivals, including the telecoms arms of Hutchison and New World, have undercut Hongkong Telecom's prices and eroded its market share. Mr Cheung said the company, one of the territory's largest companies and a subsidiary of Cable & Wireless of the UK, had lost 15 per cent of its international market share in the first half, compared with the

same period in 1995. important to the company's prospects at present, since direct-dial monopoly is currently under review. Mr Cheung said yesterday, however, that the company was under no pressure to reach an agreement on an early

termination of the franchise,

which is due to last until

The Hong Kong Telecom chief said that while dislogue on the issue would be intensifying, there would only be an accord if it was beneficial to shareholders.

Increased competition underpinned the group's strategy of reducing dependence on international direct-dial services, Mr Cheung said. "Three years ago IDD formed some 63 per cent of overall revenues. It now represents about 55 per fax and voicemail products, for a 37 per cent rise in revenue from other telephone activities.

Total revenues during the period climbed 9.8 per cent to HK\$15.92bn. The increase included a rise of 4.8 per cent in international services, which in turn reflected traffic growth of 11 per cent. Growth in traffic to China increased just 5 per cent.

Overall operating margins Regulatory issues are increased one percentage point to 38 per cent, while Mr Cheung cited steady its lucrative international progress in the company's three-year plan to reduce the headcount by 2,500.

The interim dividend is increased from 30.9 cents to 34.6 cents. Earnings per share rose from 48.2 cents to

# Government price cutting hits Shionogi

# Recently, we pulled a D&B report on ourselves.

# It did wonders for improving our vision.

Companies worldwide use Dun & Bradstreet to clarify the potential of key business alliances. So, we decided to use our own strengths to see ourselves as we really are.

After taking a long, hard look, we saw a company that was too diversified, without a clear focus for future growth. The result was a bold new visionary plan—the spin-off of A.C. Nielsen and Cognizant Corporation as independent public companies and a refocusing on who we are and what we do best—creating solid strategic relationships between companies.

We are proud to introduce the new Dun & Bradstreet Corporation, which comprises three independent companies with outstanding reputations for quality, customer services and products. Companies known for helping customers grow their businesses.

We're now a \$2 billion corporation with 16,000 associates in 40 countries. Dun & Bradstreet is the world's largest source of business-to-business intelligence, helping other companies build strategic business alliances and long-term relationships. Moody's Investors Service is a global leader in rating debt. And Reuben H. Donnelley is the largest independent publisher and marketer of yellow pages in the United States.

Our sharper corporate focus now enables us to make faster, more responsive decisions, and to better anticipate the needs and desires of our customers and shareholders. Today and into the 21st century.

We are poised for a new era. Our vision has never been clearer.

The Dun & Bradstreet Corporation

# Gehe bids £651m for Lloyds

By Christopher Price

The battle for Lloyds Chemists intensified yesterday as Gehe of Germany returned to the fray, bidding £650.6m (\$1.06bn) in cash for the pharmacy chain.

The terms were similar to the German group's earlier bid, which, like a rival one from the UK's UniChem, was referred to the competition authorities in March. Both companies were given approval by the government to proceed with their bids

just over two weeks ago. The value of the new 500pa-share offer failed to top

Cost concerns behind cut in M&S forecasts

By Peggy Hollinger

Shares in Marks and Spencer fell 5 per cent yesterday and brokers cut full-year forecasts as the high street retailer announced plans to create 2,000 jobs in the UK and abroad and interim results at the lower end of expectations.

Sir Richard Greenbury, chairman, warned that extra investment to bring the total workforce to 57,000 would inevitably increase our cost base". He said it was necessary to satisfy M&S's growing number of customers around the world. He refused to quantify the costs but said they were expected to rise in line with sales.

The announcement came as the group turned in an 11.6 per cent increase in interim profits. Pre-tax profits of £430.1m (\$701.1m) against last year's £385.4m. compared with a forecast range of £420m-£465m. Sales from continuing operations rose 9 per cent to £3.58bn. The shares, reflecting the market's initial disappoint-ment over the profits, fell

26p to 483p.

A 9 per cent rise in the cost base, which held back

operating margins in the first half to a flat 12 per cent, surprised analysts. As a result, full-year forecasts were pulled back from about £1.16bn to about £1.11bn.

However, most said investment in service at a time of strong sales growth was a logical move and could win the company valuable long-term market share. Furthermore, the extra costs could be cut in hard times. It is a way of flattening out the peaks and troughs of the economic cycle," said one analyst.

In spite of the market's disappointment, Sir Richard said the group remained "on track for doing what we want this year". With conto the high street, M&S was upbeat about prospects for the rest of the year. He rejected suggestions that M&S had reached saturation point in the UK, pointing out that only four stores currently carried the group's entire product range

### LEX COMMENT

### M&S

if Marks and Spencer is the tortoise Sir Richard Greenbury, its chairman. believes, the market is the hare. M&S's share price fell by 26p, or 5 per cent, to 483p yesterday. But this says more about the market's excitable spirits than it does about the company's performance. Perhaps M&S's trading statements earlier this year fostered undue optimism; certainly there was little in yesterday's half-year figures to justify much anxiety. The market chose to focus on

Marks and Spencer

re price relative to the

pturn !
breving !
ahithre:

the 2,000 extra jobs being created this year, which contributed to higher than expeced costs. But to punish the company for this is perverse Not only is the investment the result of attracting more customers to its stores but it is aimed at bolstering service, one of the core values which underpins the group's success. Furthermore, the figures show that the M&S formula of product innovation, quality and service continues to fuel growth both in the UK and in newer

markets like Europe and Asia. If there is a criticism, it is that the cautious pace of the tortoise can be painful. Did M&S have to wait 21 years after entering France to open its first store in Germany? The rejoinder, of course, is that the tortoise gets there in the end. With profit forecasts for the year trimmed back to around £1.1bn, the share is on a forward price/earnings ratio of 18. The growth prospects of the company would appear to justify this slight premium to the sector.

### Whitbread

Whitbread's evolution from traditional brewer to retail leisure group has left it basking in the glow of the UK's consumer spending recovery. Profits are growing at an impressive pace across its spread of businesses, helped by a £400m a year capital expenditure programme. It is little wonder the management sounds ebullient.

Nonetheless, the pace of investment has made earnings growth easy in a low interest rate environment. The problem is delivering a decent return in the longer run. David Lloyd Leisure, acquired for £200m last year, will scarcely cover its interest charges this year. A pipeline of new clubs could help achieve a 15 per cent pre-tax return in four years time; but a fall in consumer spending would bring those returns down again. Whitbread's historic return on investment does not encourage confidence and the fashion for investment in pubs in the UK suggests that such projects could soon become less profitable.

The momentum within Whitbread's businesses should continue to drive profits faster than the stock market over the next two years, diluting such concerns. Whitbread's balance sheet can comfortably support its spending programme. In p/e terms, the shares are at only a small premium to the market. But while investors may make some hav during this blast of consumer sunshine. the harvest from Whitbread's recent acquisitions could

# More acquires Swedish rival

London and Hugh Carnegy in Stockholm

More Group, the UK's largest outdoor advertiser. yesterday announced the acquisition of its biggest competitor in Scandinavi

for £78.1m (\$127m). The deal will be partly financed by a 1-for-4 rights issue, at 600p a share, to raise £48.6m. The shares fell 13½p to 684p yesterday.

More plans to buy Wennergren-Williams, the Swedish group which is the biggest outdoor advertiser in its home market and has recently expanded aggressively in Denmark.

Mr Roger Parry, More's chief executive, stressed the importance of access to the Swedish market. Wenner-gren-Williams' dominance of that market was almost guaranteed, he said, because of strict planning restrictions on new advertising sites. "We are making this acquisition not because of the earnings kick but because of the long-term strategic prospects.'

With the deal partly funded by debt, Mr Parry said gearing would rise from 20 per cent to a pro forma 200 per cent, with net borMore Group Share price (pence)

cashflow should cut this. Henry Schroder, the investment hank, said it had included a tender element in sub-underwriting arrangements for the issue. This was only the second time it had done so following its premiere last week with a £222m rights issue for Stakis. The tender element reduces fees and Mr Robert Swannell, head of UK corporate finance at Schroder, said it was likely to be used increasingly frequently. He warned, however, that entire

issues were unlikely to go

out to tender for fear of scar-

ing off pension funds and

other institutions.

# MAM's defined pensions grow

By William Lewis

Mercury Asset Management, the UK's largest fund manager, disclosed yesterday that over the last six months it had won more than 40 mandates to manage defined contributions pension schemes in the UK.

Defined contribution schemes, through which members are able to build up their own individual funds, are one of the fastestgrowing areas of new business for institutional fund managers which have traditionally invested funds from defined benefit schemes.

rise in pre-tax profits to cent to £103.8m. £81.8m (\$133m) for the six months to September, Mr Hugh Stevenson, chairman, said: "This business (defined contribution schemes] will be an important source of investment business

revenue and we are encourged by the position which we have achieved in this rapidly growing market".

Turnover rose 26 per cent to £162.5m mainly because of a higher level of funds under management, which rose 21 per cent to £85.9bn, and the early payment of performance fees by clients. Stripping out the rise in

equity markets, net new business increased by £2bn. Expenditure on systems and infrastructure, a higher provision for staff bonus payments and the consolida-tion of an Australian subsid-

iary resulted in operating Announcing a 29 per cent costs increasing by 27 per One analyst said MAM's strategy on possible acquisitions appeared to be unclear and that it needed to focus on strengthening its US

<sup>\*</sup>Excluding non-operating items

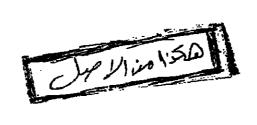

- ☐ This was a strong trading performance. Like for like sales growth was 5% with the remainder from acquisitions and new outlets.
- Trading cash flow continued to be good, helping to support a vigorous capital investment programme. Over £250 million has been invested so far this year to secure future growth.
- Our trading results confirm that consumer spending is on an upward trend and I expect this to continue. Competition, particularly in the eating out market, remains strong and at the same time customers' expectations in terms of value for money and quality of service have grown markedly.

Whitbread has worked hard to meet and frequently exceed these expectations. I am confident of the company's ability to compete successfully for an increased share of leisure spending.

Sir Michael Angus, Chairman

A copy of the unaudited results for the sh months to August 31, 1996 will be available from the Company Secretary, Whithread PLC, Chiswell Street, London ECTY 4SD.

### COMPANIES AND FINANCE: UK

# Upturn in brewing cheers Whitbread

By Roderick Oram, Consumer Industries Editor

Whitbread reaped the rewards of heavy investment in pubs, restaurants and hotels and an upswing in brewing profits yesterday, when it reported a 13 per cent rise in interim pre-tax Whitbread would grow by profits to £178.1m (\$290m).

It kicked off what should be a "real humdinging results season for brewers and pub owners," one analyst said. For many companies, beer volumes are up despite poorer summer weather than last year and some margins have firmed.

But the company tried to moderate analysts' enthusiasm for the second half. It would lack, for example, the year earlier's 53rd week of trading and competition remained fierce in the esting-out market.

In the six months to August, capital spending was more than £250m. Coupled with acquisitions, it drove net debt to £640m (£296m) for gearing of 27 per

Mr Peter Jarvis, chief executive, said Whitbread had made-the three big strategic acquisitions it needed over the past year: Marriott in hotels, David Lloyd in sports centres, and Pelican in city centre restaurants. Now building those brands, brands developed in house and smaller opportunistic acquisitions.

Thus, the group was less likely to write off goodwill which it has had to pay on some acquired brands, he added. Including tax and goodwill written off, Whitread's return on capital was 8.2 per cent against a cost of capital of 10.5-11 per cent, one analyst calculated. With the recent Pelican purchase hitting the current half, the return on capital will fall to

Pre-tax profits from restaurants, hotels and leisure rose 58 per cent to £56.3m on Hut and TGI Friday's profits were up 20 per cent. Whitbread Inns, the man-

aged houses, lifted profits 15 pub was up 7 per cent.

Brewing profits rose 12.4

ner cent to £30.8m on sales

up 8 per cent. In a market

per cent to £77.4m on sales up 14 per cent. Food sales were up 23 per cent, amusement machine revenue was um 12 per cent and drinks 9 Whitbread Pub Partner-

down 1 per cent, Whitbread's volume from existing brands grew 3 per cent but by 8 per cent including the Labatt ships, its tenanted houses, UK acquisition. Take-home reported a 1 per cent rise in volumes were up 10 per cent. profits to £30.7m and a 3 per while Stella Artois was cent decline in sales, having on average 161 fewer pubs in the latest period. Profit per ahead 19 per cent and Heineken Export 29 per cent.

# Electric accuses CalEnergy

Northern Electric accused CalEnergy, its Nebraskabased predator, of making "misleading" statements in its official offer document yesterday.

CalEnergy, the indepenoffer of 630p per share and 103p per preference share was "full and fair".

It claimed that the £11 a House almost two years ago which estimated Trafalgar's

would now value Northern bid to be worth 732p a share at 633p a share.

Mr David Morris, Northern chairman, said the calculations behind this statement were "misleading" as they used the gross amounts paid out by the regional electricity company since the abordent power producer, argued tive bid. Northern has disthat its £759m (\$1.24bn) cash tributed about £540m in special dividends, a share consolidation, and from the

National Grid demerger. Northern's advisers proshare bid made by Trafalgar duced their own calculations

once these pay-outs were stripped out. They warned shareholders not to accept the offer and reminded them of the special dividend of 56.5p next February.

CalEnergy disagreed with the post-tax basis of Northern's figures and said it left out the effects of a windfall tax. Its offer was reduced by some £7m yesterday, adjusting for the number of shares

It reiterated its belief that the offer was fair, pointing price before bid speculation buoyed it.

CalEnergy emphasised the strategic value of the bid. This prompted Mr Morris at Northern to say that "CalEnergy itself recognises the strategic and commercial advantages which Northern would bring to it. But it is trying to buy these benefits

Northern has two weeks to respond to the offer. It is to bring forward the announcement of its interim results.

Traders in New York said

The yield on the benchmark 30-year Treasury fell to 6.583 per cent, its lowest

level since early March, as the price jumped is to 102 by midday. At the short end of the maturity spectrum the two-year note rose 🔒 to 100%, yielding 5.722 per cent. The December 30-year bond

future rose it to 1131h. Investors also continued to bet that US voters would return a Republican majority to both houses of Congress and send President Bill Clinton back to the White House, continuing the government's efforts to reduce the budget deficit.

Mr Richard Gilhooly, international bonds strategist at Paribas Capital Markets in New York, said he thought the market was getting close to being overvalued.

"If you do get the expected outcome [from the elections]. it has largely been priced into the market and it seems that the upside is limited," he said. He added that such overvaluation could spell trouble for the \$10bn auctions of 10-year and 30-year bonds set for today and

# operator to raise \$115m

By Conner Middelmann

Netia South, the private Polish telecoms operator jointly owned by Sweden's Telia and Poland's RP Telekom, is set to become the latest central European borrower to benefit from international banks' hunger for high-yielding assets.

The company plans to establish a \$115m project finance loan facility, with Chase Investment Bank and Bank Handlowy w Warszawie mandated as arrangers. The banks have agreed to underwrite the facility. which is expected to be syndicated to a select group of banks late this year.

Through Telekom Sliesia, its majority owned subsidiary. Netia plans to build, own and operate a telecoms network consisting of 250,000 lines in Silesia, a highly industrialised and densely populated region south-west Poland. in

Earlier this year, Netia raised \$180m through a 10-year project finance facility, which included a \$75m A-loan from the European Bank for Reconstruction and Development, an \$85m B-loan syndicated among banks and \$15m from the

Nordic Investment Bank. The interest margin on that transaction was around 325 basis points over Libor. whereas the margin on the forthcoming deal is said to be closer to 250 points, reflecting a sharp decline in margins in the region.

But while borrowers from other countries in the region, including Hungary, the Czech Republic, Slovenia and Slovakia, have been active players in the syndicated loans market. Polish

only around \$300m this year. This is partly because liquidity in the domestic banking sector and fierce competition among Polish banks have made it cheaper for companies to borrow funds at home than abroad. However, observers say this is likely to change. "The general fall in interest mar-

gins for eastern European borrowers means that Polish pricings in the international market will converge towards domestic rates," says one banker. Moreover, as the financing

demand in Poland grows, the capacity of local banks to provide enough funding may become exhausted," he But even if Polish borrow-

ings in the international syndicated loans market increase, interest margins are not likely to fall as quickly as, say, in Hungary, because some banks are still wary of lending to Poland. "There's always a big

hangover of caution with any country that has rescheduled its debt," says Mr Lorenz Jorgensen, senior banker at the EBRD's syndications department.

Japanese banks, which have been instrumental in driving margins in other eastern European countries lower, are cautious of entering countries that have rescheduled their debt, as Japan's ministry of finance does not seem eager to encourage an atmosphere of

forgiveness, bankers say. By contrast, most German and Austrian banks do not need to make provisions against Polish assets, and many US banks have relatively loose provision

### Small deals compete with World Bank for attention

### INTERNATIONAL BONDS

By Samer iskandar

Primary market activity all but ground to a halt yesterday, as a handful of small deals competed for the attention of investors with yet recent success of similar another lira-denominated zero-coupon issue by the

World Bank. Emerging market-hungry investors were offered a novel securitisation by Venezuela Synthetic Sovereign Investment. The deal is a repackaging of existing Repub-2007, originally denominated

# Dollar gains in final trading before US election

By Simon Kuper

The dollar gained ahead of the belief that the Republicans would keep control of Clinton would win re-elec-The dollar also benefited from yesterday's rise in US stocks and bonds.

The D-Mark suffered on a second successive day of its deposit and overnight the criterion. With the weak German economic fig. lending rates by 50 basis French President Jacques weak German economic fig-ures, with orders data com-points, hoping to weaken the ing in lower than expected. appreciating krone.

This suggested that the Ger— The dollar closed in Lonman recovery was weaker than expected, and a Bundesbank rate hike a more distant prospect than many currency analysts had how York

later hit by reports that a large number of countries could qualify for the first

round of European monetary firmer against the yen at union. This revived "conver- Y114. The yen was gence trades", in which traders sell the D-Mark and buy the lira and peseta on expeclast night's US elections on tations that yield curves will converge

The Swiss franc hit a fresh Congress while President 20-month low against the D-Mark on news that Mr 15 European Union member tion. Currency strategists Boris Yeltsin, the Russian said this suggested a contin- President, had had successsaid this suggested a contin-ued tight US fiscal policy ful open heart surgery. The set out in the Maastricht and thus a stronger dollar. Swiss franc is considered a treaty. The progress was safe haven currency that thanks to strong European rises during international turmoil

Norway unexpectedly cut

don three tenths of a pfennigs stronger against the D-Mark at DM1.516 and Y0.2 unchanged against the D-Mark at Y75.20.

reports yesterday, the European Commission will today say that as many as 13 of the states are on track to meet sconomic growth, the reports said. Only Italy and Chirac saying yesterday that Spain was sure to qualify for the first round of Emn. belief

rency would have many members. The peseta and lira rose marginally against the D-Mark. But one currency strategist said the rise would have been more pronounced but for lira selling by the

said the central bank wants to stop the lira from appreciating too much before its revived in the markets that expected entry into the European exchange rate the single European curmechanism later this month. Italy is seeking an entry rate above L1,000 to the D-Mark, while Fra

than UK yields, which were yields. He said the favourable yields helped sterling to withstand weaker than expected UK industrial production and manufacturing output figures yesterday. The pound rose another two fifths of a pfennig against the D-Mark to close at DM2.496, after hitting resistance at DM2.50.

■ Norges Bank, the Norwegian central bank, surprised the markets with a 50 basis point interest rate cut when most analysts had expected the bank to raise rates. The fall in the deposit rate to 4 lending rate to 6 per cent

krone, which closed in Lo almost on a par with Italian don at Nkr4,203 to th D-Mark.

MONEY RATES

Mr Kjeli Storvik, Norg Bank's governor, said t rate cut was meant ' reduce the krone's apprec tion". The currency h risen on the back of high prices and strong econom growth, and the bank said krone to weaken it.

Mr Jeremy Hawkins, ch economist at the Bank in Norway a fortnight as when Mr Thorbjorn Jaglar succeeded his fellow Labo party member Mrs Gro Ha lem Brundtland as prin minister. "A cynical vie would be that the new go the bank to trim rates," I Hawkins said.

### **PHARMACEUTICAL BUSINESS NEWS**

### The twice-monthly international update on the pharmaceutical industry

Published every two weeks, Pharmaceutical Business News brings you up-to-date news, quantitative analysis, forecasts and inside information on new product introductions and joint venture agreements.

Dharmaceutical Business News also contains round-ups of essential interim and year-end company financial performance and results, plus news on acquisitions and mergers, and regular comment and views from the world's stockmarkets.

### Who should read **Pharmaceutical Business** News?

Anybody that has dealings with the pharmaceutical business will find a subscription to Pharmaceutical Business News invaluable. It is an essential source of information for all pharmaceutical executives involved in:

- Management
- Marketing
- Research & Development
- Sales
- Finance
- Manufacturing

### COMMODITIES AND AGRICULTURE

# Surge in US demand buoys market for LPG

By Deborah Hargreaves

Prices for liquefied petroleum gas have risen strongly over the past two months as demand in the US has surged. The booming market has hit US petrochemicals producers hard, along with other companies which use propane and butane as raw materials.

LPG contract prices from Saudi Arabia - the main supplier - were recently fixed at \$250 a tonne for rently at 52 cents a gallon, and Mr both propane and butane, an Gisd believes the market will

increase of almost \$50 a tonne from the October price and higher than most analysts' expectations.

"The market has been strong all year - we thought it would peak early and fall off, but the latest Saudi contract prices make us think there won't be a peak until January," said Mr Ron Gisd, associate at Purvin & Gertz, the Hous-

ton-based oil analysts. Spot prices in the US are curaverage 60 cents a gallon in January. "That's just an average there are likely to be higher price spikes in cold weather," he said.

The LPG market has been bolstered by the recent strength of prices for crude oil and refined products such as heating oil and iet fuel. Strong naphtha prices have encouraged some ethylene producers to use LPG as a feed stock to save costs on naphtha, but this has led to an escalating upwards spiral in prices.

British Petroleum said vesterday that the higher cost of naphtha had dampened the rise in profits at its chemicals unit for the third quarter.

Argus LPG World, the trade publication for the liquefied petroleum gas industry, noted that prices for butane are at their highest levels for 18 months and that the propane market is stronger than in February, which is the time of peak demand for the product as a heating fuel.

US propane and butane stocks are at their lowest levels since the Gulf war at 51m barrels, down from 56.5m barrels in October 1995. Supplies on the US Gulf coast are particularly tight and these are usually drawn on later in the winter to replenish the main consuming centres in the

north-east of the US. World supplies have become tighter since an explosion in July closed a large Pemex gas plant in Mexico which produced one-third UK Company News

of the country's needs. Since then Mexico has been forced to become a net importer of LPG, rather than a net exporter.

Propane and butane are used or cooking and heating in Acie for cooking and heating in Asia. The US uses 300,000 barrels a day of propane in ethylene production as well as for agricultural uses. Demand remains strong across the globe as consumers chase tight supplies. BP results, see

# Signs seen of fresh

By Kenneth Gooding,

There are signs that investors are taking a fresh look at gold in the final quarter of this year because of worries about a possible sharp technical fall in share prices, according to CPM, the New York based precious metals consultancy.

However, it suggests that the gold price is unlikely to react until investors "return forcefully, possibly toward the middle of 1997".

In its latest survey, CPM recalls that a surge in investor interest pushed gold to nearly \$420 a troy ounce in January and February this year but in March investment demand for physical metal faded and the price fell back below \$400. Gold closed in London yesterday at \$379.45.

Investors will add about 2.2m ounces to their net holdings this year, CPM suggests, 47 per cent more than in 1995. Net investment demand could reach 3.9m ounces next year.

Net sales of gold by central banks - another key factor in the market - are projected to reach 10m ounces in both 1996 and 1997. Some 2m ounces of next year's total could be provided by the International Monetary Fund, which is expected to sell 5m ounces in all.

"These sales are not expected to disrupt the gold market," CPM insists. It suggests 89m ounces of newly refined gold will reach the market this year. 4.2 per cent more than in 1995. This supply is forecast to increase next year by another 2.2 per cent to 91m ounces.

# Crude oil edges higher

MARKETS REPORT By Robert Corzine

Crude oil prices edged upwards yesterday after six days of steady losses shaved about \$2.50 a barrel off the price of the benchmark Brent Blend for December delivery. It was quoted at \$22.35 a barrel in late London trading, seven cents up on Monday's close.

British Petroleum yesterday said it expected oil prices to remain relatively firm in the fourth quarter. But the recent oil price rally has done little to change BP's longer-term view. It still expects average prices to remain in the \$16-\$18 concentrate. range over the long term.

said company executives. Prices of refined products such as gas oil and jet fuel weakened yesterday, as traders waited for the latest inventory statistics from the American Petroleum Institute. November gas oil futures on London's International Petroleum Exchange closed 50 cents down at \$208.50 a tonne.

On the London Metal Exchange tin retested the 17-month low of \$5,890 a tonne it reached on Monday. A "bear" raid has driven the

price down from a 1996 high of \$6,650.

Mr Ted Arnold, an analyst at Merrill Lynch, said it was too early to expect a strong price recovery on the back of consumer demand. Supplies of tin "come out of the woodwork" at the right price, he suggested - and the right price seemed to have moved down from \$6,800 to \$6,400. Noranda of Canada has closed its Heath Steele zinc

and lead mine in New Brunswick after an explosion killed one miner and injured another on Monday. Production is not expected to be interrupted for long at

the mine, which produces 100,000 tonnes a year of zinc concentrate and a little lead Zinc prices brushed aside the potential impact, even though this is the second

disruption Noranda has suffered in recent months. It lost an estimated 40,000 tonnes of zinc metal when its Brunswick mine was affected by seismic activity.

# Price rises put spotlight on hedging

which had taken stable raw materials prices for granted have had to think again this year.

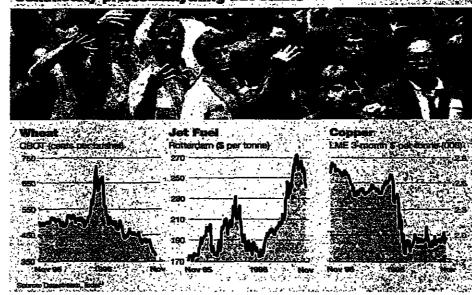

Soaring wheat prices in May, a sliding copper market three months later, and now fuel prices standing close to a five-year high have forced many commodities users to re-write financial plans. While companies stress

that raw materials make up a small part of their cost base, they usually respond to rising commodity prices by lifting product prices. Most airlines, for example,

were caught unawares by the recent rise in jet-fuel prices after five years of stability. British Airways recently increased its European fares 2.5 per cent partly as a result of soaring fuel costs, while Japan Airlines last week blamed higher fuel prices for a 61 per cent fall in first-half profits.

Food companies such as Nestlé, as well as breadmakers and biscuit-makers. were hit hard by sharp increases in grain prices earlier this year and a surge in the coffee market two years

However, companies do not have to see their bottom lines savaged by a jump in fuel or flour bills. On most large commodities, brokers offer simple hedges which act like insurance contracts. guaranteeing payment of a certain price on a set date.

Most corporate consumers hedge against rising costs. but many had become complacent in recent years about stable and falling commodi-

"I have been quite surprised at the way the industry has tended to disregard fuel as an important part of its cost base," says Mr William Gaillard, at the International Air Transport Association in Geneva. British Airways says it has

a hedging policy, but declines to give details. US carriers have traditionally period.

SOFTS

M COCOA LIFFE (E/tonn

been more reluctant to hedge costs, because of a Horn, executive director of conservative approach to

ost fuel contracts for users such as airlines, freight companies, bus operators and industrial consumers like British Steel are priced on a monthly basis at a premium or a discount to the average quoted energy cost. Brokers offer a range of contracts allowing users to lock in to a price for a longer

For example, Mr Lindsay energy derivatives at Lebman Brothers in London, explains that an airline could buy into a fixed-forfloating-rate oil swap now which would guarantee its prices for buying jet fuel next summer. The airline would continue to buy from its traditional suppliers, but the broker would take on the risk of the floating-rate price

payment, leaving the airline to pay a fixed price. Mining companies and some oil producers have tra-

# Gilts to equity switch restrains UK shares

MARKET REPORT By Steve Thompson,

UK Stock Market Editor

Talk of a series of switching operations, involving institutions shifting funds from UK equities into gilts, plus a continuation of sterling's recent strength, kept the pressure on London stocks yesterday.

Rumours of a switch between the two markets was highlighted by signs of heavy business in index options. Gilts reaped the benefit with the 10-year and 20year issues around 22-24 ticks ahead near the close.

The FTSE 100 index, which has bears adopting the view that a sectors.

had to cope with flurries of sell-ing pressure since last week's Bill Clinton and Congressional on the back foot, slipping some 7 surprise UK interest rate rise. endured another buffeting yesterday, closing 7.0 off at 3.921.1.

reasons behind equities poor showing yesterday. Sterling's strength against leading currencies was said to have affected the big international stocks and dealers continued to worry about the hase rates in the run-up to the general election.

The US election, being held yesterday, was another factor said to have troubled European markets at the outset, with some

Democrats could result in a vigorous spending programme.

Also worrying traders was the But there were other potent self-off in the second-liners and small cap stocks yesterday. The FTSE 250 underperformed the leaders, sliding 13.2 to 4,405.2, while the Small Cap index retreated 3.1 to 2,160.9.

There was more had news with possibility of further increases in disappointing figures from Marks & Spencer, the UK's leading retailer. M&S shares, heavily weighted in the FTSE 100 index, dropped more than 5 per cent, causing considerable damage to sentiment in the consumer

past 12 months.

programme trades indicated that much of the sell-side activity by institutions had been completed, although some adopted the view that the potential for further increases in UK interest rates would result in further falls.

Others, however, pointed to Wall Street's rally and said the growing feeling was that the next meeting of the Federal Reserve's monetary policy-making committee, starting on November 13, would see the US authorities hold the line on interest rates.

Turnover at the 6pm count was 781.9m and split evenly between leaders and second-liners. Customer business on Monday was a lowly £1bn.

### Active trading in BSkyB

By Peter John, Lisa Wood

BSkvB was under pressure despite support from the stabilisation process following News Corp's \$1bn preference share issue.

The issue of special preference shares by Mr Rupert Murdoch's media empire, which will be exchangeable into BSkyB stock, is being handled by Merrill Lynch.

The exercise price of the warrants represented a 20 per cent premium to the price of BSkyB shares in London before the warrants began trading yesterday and Merrill can buy BSkyB shares to stabilise the price for 30 days.

In early trading, the shares were up 14, but broker buying was undermined by a sell note from Lehman Brothers, Lehman began coverage of the satellite broadcaster with a valuation of only 481p a share. It believes the increased cost of buying programmes, as well as more government regulation to ensure increased competition, could under-

mine profits. Despite a big fall on Monday, BSkyB failed to recover and ended the day only 11/2 firmer at 54812p with the two-way pull on the stock ensuring very heavy volume of nearly 30m shares.

Relief mingled with enthu-

the announcement of its

The market had been bracing itself for bad news following last week's disappointing figures from Shell. The nervousness was increased by the recent jump in sterling - hitting the profits of big dollar earners and the recent correction in

underlying oil price. As it was, both the under-lying profits were at the top end of the range of analysts' forecasts and the figures from the refining and marketing side were particularly

encouraging.

Analyst Mr Steve Turner
of HSBC James Capel commented: "There is no great ammunition for the bears in these figures. If it were not for the oil price and sterling the shares would have performed better." BP rose 2 to 6401/2p while Shell Transport fell 7 to 958 p.

Marks & Spencer fell 26 to 483p after first-half results showing profits growth of 11.6 per cent. This disappointed the market which had forecast up to a 20 per cent increase in profits - an expectation which Sir Richard Greenbury described as "naive".

One analyst said the results were good but dull, with M&S a low-risk stock providing average reward. Several analysts downgraded forecasts for the stock. which is on a premium rating. ABN-Amro Hoare Govett trimmed its full-year estimate from £1.16bn to £1.11bn with the stock a "weak hold". UBS took £40m

slasm to help BP remain in off its forecast to £1.12bn positive territory following while retaining its positive view on the stock.

Lloyds Chemists fell 51/2 to third-quarter figures. 511p after the market was disappointed by the price at which Gehe, the German pharmaceuticals distributor, launched a bid. Unichem has already made an offer for the chemist chain. The Gehe hid. while topping Unichem's cash and share offer, was not as high as expected.

Dixons hardened 5 to 549p after NatWest Securities upgraded its forecast for the year ended April 1977 from £180m to£195m and from £210m to £225m for the following year. Most forecasts for the current year have been between £180m and

UK generators, National Power and PowerGen were squeezed higher on stock shortages after the recent UBS recommendation, which

Rises and falls 52 Week highs and low LIFFE Equity options 54 132

Better than expected interim results initially lifted Whitbread a few pence, but the shares then fell back 4 to 7361/2p on trade of 5.5m shares, an unusually high volume for the stock.

Analysts said there had Power lifted 16 to 417%p and been some switching into other stocks, particularly Greenalls, which rose 174 to Lloyds TSB was weak, as one broker apparently went 588%p, with SGST recomround offering 6m shares at 383p a share. With half the mending the stock as a deal carried out just before "buy". Scottish & Newcastie. which hardened 5% to the close, the shares were off 6481/ap, was also said to be a beneficiary of some switch-Bank of Scotland dipped 1% to 277p, although further falls were stemmed by Gold-

ing from Whithread. First Leisure fell 9 to 360%p after a disappointing trading statement, with market conditions for bingo said to be depressed. Ladbroke, which also has substantial interests in bingo, fell 31/4 to 194½p in sympathy. Diversified industrials company Cookson Group gave up 8 to 217/p after trade of 5.2m. after Crédit Lyonnais Laing weighed in with a sharp

profits downgrade. Crédit Lyonnais cut its current year profits forecast by £23m to £170m and reduced the following year's figures by £36m to £189m. Explaining the move, Mr Ian Rennardson at Crédit Lyonnais said: "The electronic materials division - responsible for a third of profits is showing no signs of improving this year and signs for 1997 are not very positive so far."

In the rest of the sector. Tomkins were wanted and the shares hardened 31/4 to 255p on volume of 7.7m. BTR added 5 to 255p. Albert E Sharp favours the

stock and suggested investors should "buy for growth potential" British Airways was one of the day's best performers. The shares jumped 181/2 to 568p after posting interim

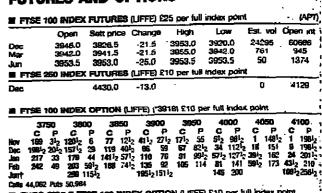

Africa (13)

was boosted by expectations that the carrier's tie-up with American Airlines will soon receive approval.

Bid speculation continued in Vodafone Group. The shares gained another 4½ to 246p, in heavy trading of 13m, with AT&T of the US still thought to be the most

still incomplete incom More Group dropped 13% to 684p as the billboard and bus shelter advertiser announced a one-for-four rights issue at 600p a share to part-fund the £78.1m acquisition of Wennergren Williams, the Swedish out-

# **Bonds lift** Dow at midsession

### AMERICAS

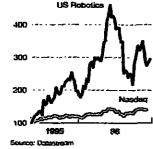

Soaring bond prices and hopes that the political landscape would remain largely unchanged sent US shares higher at midsession, writes Lisa Bransten in New York. At 1 pm, Dow Jones Indus-

trial Average was 43.98 stronger at 6,085.66, the Stan-713.84 and the American Stock Exchange composite climbed 1,58 at 573.34. Volume on the NYSE was 278m

Bond prices started the

Index and share price (rebased)

day higher as the dollar rose against both the yen and the D-Mark, sending the yield on the benchmark 30-year Treasury to its lowest level since early March.

Falling bond yields led to gains among interest-rate sensitive banks. Chase Manhattan Bank added \$2% to \$88%. Citicorp climbed \$2% to \$102, BankAmerica was \$2 stronger at \$931, and Bank of New York rose \$1'a at \$333...

Technology shares also contributed to yesterday's rally as shares in the sector rebounded after dropping since the middle of last month.

By early afternoon, the Nasdaq composite, which is about 40 per cent technology Exchange technology index C\$88.40.

The second most active share on the Nasdaq was US Robotics, which recovered \$4% of the \$18% it had lost since October 15 bringing the shares to \$63%. Late on Monday, US Robotics reported earnings of 71 cents a share, nearly double what the company made in the dard & Poor's 500 rose 7.11 at comparable period last year and in line with analysts' expectations.

The largest companies on the Nasdaq were also sharply higher.

Intel added \$2% at \$113%, Microsoft was \$3 stronger at \$141 and Cisco Systems added \$2\h at \$63!\s.
Meanwhile, fortunes were

mixed at volatile Internet companies. Yahoo!, the Internet directory company, lost \$1% at \$17% and Cybercash, an Internet commerce company, shed \$½ at \$27%. Netscape Communications. the Internet software group, rose \$1 to \$47%

Shares in MCI slipped \$1%. or 5 per cent, to \$29% amid worries that British Telecommunications' buyout of the company could face considerable delays. MCI shares had jumped \$5% as news of the takeover emerged TORONTO pushed further

into record territory at midsession with banks, property and utilities all posting strong gains. The advance on Wall Street helped underpin sentiment and the TSE-300 composite

There were slack performances during the morning energy and mining stocks, but for the most part, it was another session of steady buying. Bank shares came in for special attention with Royal Bank of Canada up C\$1.05 at C\$46.70 and Toronto-Dominion C\$1 better at C\$34.10.

Elsewhere among bluechips, Alcan gained 5 cents to C\$43.15 and Seagram put shares, was up 10.26 at on 70 cents to C\$49.80. North-1,230.74 and the Pacific Stock ern Telecom gained C\$1.20 to

### Karachi kerb traders greet Bhutto dismissal Telecom dropped 25 cents to technical rebound which HK\$13.35 as first-half results took the index 0.255 higher

The dismissal of Pakistan's prime minister Ms Benazir Bhutto and her government drove share prices sharply higher in kerb trading in KARACHI, where the exchange was closed for a religious holiday.

Dealers said up to 500 investors, more than could be found on the floor of the exchange on a normal working day, had flocked to trade in the parking lot outside the exchange. Analysts commented that

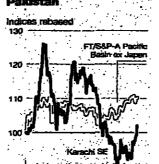

the removal of the Bhutto government, under fire for alleged corruption and mishandling the economy, could lift a cloud of uncertainty from the market. If the caretaker administration could initiate a fair accountability process it could help restore investor confidence in the longer term, they said.

The market jumped 2.8 per cent on Monday on demand for blue chips following a rise in synthetic fibre prices and some favourable corporate results. Based on kerb prices quoted yesterday, one analyst suggested the marday Cetes, or T bills, later in ket could jump by as much as 6-7 per cent in official

holiday weekend and fell in parliament, have threatback in thinning volume on ened to block the forthcominvestor hesitation ahead of ing budget for fiscal 1997 the US elections and Thursday's special parliamentary ture on US military forces session to confirm the Japanese prime minister, writes Ginen Rohinson

40.73 to 20,592.33 after moving between 20,494.01 and all first-section stocks declined 3.77 to 1.553.80 and the capital-weighted Nikkei 300 was off 0.79 at 291.26. Volume dropped to an esti-

mated 203m shares from Friday's 287m as investors showed marked reluctance to commit themselves either way. Declines led advances by 572 to 458 with 208 unchanged.

### **TENDER NOTICE**

# UK GOVERNMENT ECU TREASURY BILLS

For tender on 12 November 1996 The Bank of England announces the issue by Her Majesty's Treasury of ECU 1,000 million nominal of UK Government ECU Treasury Bills, for tender on a bid-yield s on Tuesgay. 12 November 1996. An additional ECU 50 million nominal of Bills will be allotted directly to the Bank of England for the account of the Exchange

Equalisation Account. 2. The ECU 1,000 million of Bills to be issued by tender will be dated 14 November 1996 and will be in the follo

ECU 200 million for maturity on 12 December 1996. ECU 500 million for maturity on 13 February 1997. ECU 300 million for maturity on 15 May 1997.

3. All tenders must be made on the printed application forms available on request from the Bank of England. Completed application forms must be lodged, by hand, at the Bank of England, Customer Settlement Services, Threadneedle Street, London not later than 10.30 a.m., London time, on Tuesday, 12 November 1996. Payment for Bills allotted will be due on Thursday, 14 November

4. Each tender at each yield for each maturity must be made on a separate application form for a minimum of ECU 500,000 nominal. Tenders above this minimum must be in multiples of ECU 100,000 nominal.

Tenders must be made on a yield basis (calculated on the basis of the actual number of days to maturity and a year of 360 days) rounded to two decimal places. Each application form must state the maturity date of the Bills for which application is made, the yield bid and the amount tendered for.

6. Notification will be despatched on the day of the tender to applicants whose tenders have been accepted in whole or in part. For applicants who have requested credit of Bills in global form to their account with ESO, Euroclear or CEDEL, Bills will be credited in the relevant systems against payment. For applicants who have requested definitive Bills. Bills will be available for collection at Customer Settlement Services, Bank of England after 1.30 p.m. on Thursday, 14 November 1996 provided cleared funds have been credited to the Bank of England's ECU Treasury Bills Account No. 59005516 with Lloyds Bank Pic, Bank Relations, St George's House, PO Box 787, 6-8
Eastcheap, London EC3M 1LL. Definitive Bills will be available in amounts of ECU 10,000, ECU 50,000, ECU 100,000, ECU 5,000,000

and ECU 10,000,000 nominal. 7. Her Majesty's Treasury reserves the right to reject any or part of any tender.

8. The arrangements for the tender are set out in more detail in the information Memorandum on the UK Government ECU Treasury Bill programme issued by the Bank of England on behalf of Her Majesty's Treasury on 28 March 1989, and in supplements to the Information Memorandum. All tenders will be subject to the provisions of the Information Memorandum (as supplemented) and to the provisions of this notice.

9. The ECU 50 million of Bills to be allotted directly to the Bank of England for the account of the Exchange Equalisation Account will be for maturity on 15 May 1997. These Bills may be made available through sale and repurchase transactions to the market makers listed in the Information Memorandum (as supplemented) in order to facilitate settlement.

10. Copies of the Information Memorandum (and supplements to it) may be obtained at the Bank of England. UK Government ECU Treasury Bills are issued under the Treasury Bills Act 1877, the National Loans Act 1968 and the Treasury Bills Regulations 1968 as amended.

Bank of England 5 November 1996
